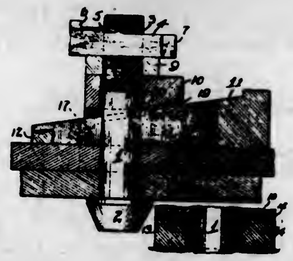
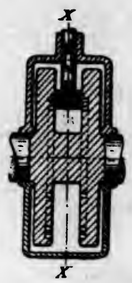
1,384,999. CARPET-SWEEPER. JAMES H. GRAHAM, Torrington, Conn., assignor, by mesne assignments, to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Aug. 16, 1917. Serial No. 186,552. 3 Claims. (Cl. 15—60.)

1. A carpet sweeper comprising a housing, suction means in the housing, a nozzle at the end of the housing and in communication with the suction means, a rotary adjustable brush in the nozzle, plates secured to the ends of the nozzle and having slots therein, pins carried by the housing and passing through the slots in the plates for pivotally supporting the same on the housing, means for tightly holding the nozzle against the end of the housing, and means carried by the housing for rotating the brush within the nozzle.



1,385,000. MACHINE FOR REVERSING SMALL ARTICLES. BRUCE N. GRIFFING, Shelton, Conn., assignor to The Griffin Button Company, Shelton, Conn., a Corporation of Connecticut. Filed June 30, 1920. Serial No. 393,017. 8 Claims. (Cl. 193—24.)

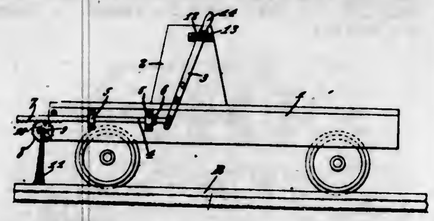
1. A machine of the character described comprising a conveyer wheel, a pair of article carrying conveyer belts, said belts being disposed in frictional engagement, one of said belts being disposed in frictional engagement with said wheel, and means for driving the conveyer belts and for causing the conveyer wheel to be rotated, whereby articles are transferred from one of said belts to the other of said belts reversing the position of each article on the belts.



1,385,001. LOCKING-BOLT. WILLIAM HACKETT, Oakland, Calif., assignor of one-half to Stephen W. Band, Oakland, Calif. Filed Mar. 15, 1920. Serial No. 365,985. 3 Claims. (Cl. 85—8.)

1. A locking bolt provided with a shank having a head at one end with its opposite end made to coöperate with a locking element, said shank adapted to be passed through two or more plates to be clamped together with the said plates confined thereon by said locking element, a block having an opening, said shank adapted to be passed through said opening for confining the block on the shank,

and a slotted wedge having teeth on opposite sides of its slot, said wedge adapted to straddle the shank of the bolt between said block and said plates, with means on said block engaging the teeth of the wedge for maintaining the wedge in clamping relation with the plates.

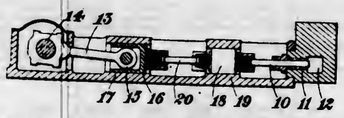


1,385,002. MECHANISM FOR CONVERTING ROTARY TO RECIPROCATING MOVEMENT. JOHN WALLACE HALL, Feltham, England. Filed Mar. 4, 1920. Serial No. 363,356. 5 Claims. (Cl. 74—1.)

1. Means for converting rotary motion into cycles of a plurality of reciprocating motions of equal amplitude and periodicity extending over any predetermined number of revolutions, comprising a pair of co-axial, revolubly mounted, parallel disks having their opposed faces formed with cam grooves, so that the grooves on the two faces are complementary to form a groove path once traversible during the predetermined number of revolutions, an incline at each extremity of each cam groove, a reciprocable member disposed between said disks, a shuttle member carried transversely by said reciprocable member, and formed with a tongue at each extremity adapted to be alternately projected into the cam grooves on one face by the said inclines on the other face, and means for simultaneously driving the disks.

1,385,003. TORPEDO-REMOVING ATTACHMENT FOR HAND-CARS AND THE LIKE. DANIEL ALBERT HEWITT, Thomasville, N. C. Filed Mar. 3, 1921. Serial No. 449,515. 1 Claim. (Cl. 15—73.)

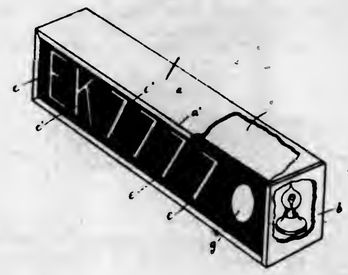
The combination with a hand car or the like, of torpedo removing means including rail engaging brushes, a hand lever, and means operated by said lever for shifting the brushes into or out of contact with the rails thereunder,



said means including a rack bar movable with the lever and a gear meshing with the rack bar and movable with the brushes.

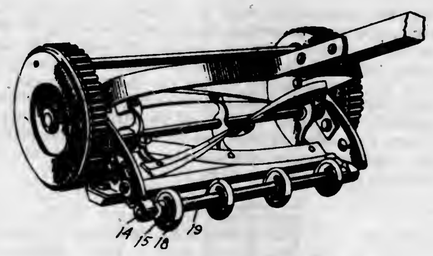
1,385,004. WRITING-DESK. ALBERT LOVEL HOWE, Alloa, Scotland, assignor to William Angus & Company (Scotland) Limited, Menstrie, North Britain. Filed Nov. 1, 1920. Serial No. 420,942. 7 Claims. (Cl. 45—92.)

1. A writing desk comprising, in combination, a support, a back located above and in rear of said support, a writing bed mounted on the support so as to be capable of being pulled forward to increase the effective width thereof, side wings located at opposite ends of the support and adapted to be turned down to increase the effective width of the writing bed and a flexible curtain housed in the back and adapted to be pulled forward over the writing bed.



1,385,005. RECIPROCATING PUMP AND THE LIKE. KARL OTTO KELLER, Sunderland, England, assignor of one-half to Robert Pile Doxford, Sunderland, Durham, England. Filed Jan. 6, 1921. Serial No. 435,354. 2 Claims. (Cl. 74—14.)

1. In a machine of the character described, the combination of an oscillating and reciprocating driving member, a ram, a plurality of cross-heads between said driving member and said ram and connecting the same so as to permit relative adjusting movement between any connected pair of said elements in a direction transversely of the line of reciprocation of said ram, substantially as described.

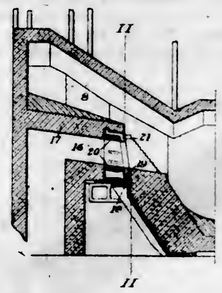


1,385,006. ILLUMINATING-SIGN FOR AUTOMOBILES. ERNEST KEMP, Clapham Common, England. Filed Sept. 10, 1919. Serial No. 322,925. 2 Claims. (Cl. 40—132.)

1. A rear lamp and license number indicator for automobiles comprising a box-like casing open at its front and rear longitudinal sides, grooves formed in the top and bottom longitudinal edges of the front side for the reception of a plurality of elements constituting the license number and danger signal, said elements consisting of a front plate of clear glass wholly closing the front side, a rear plate of translucent material having a gap formed therein in the neighborhood of one end, an intermediate plate of opaque material having an aperture at one end registering with the gap in the rear plate and having the license number formed therein in the manner of a stencil, a plate of colored glass covering the gap in the

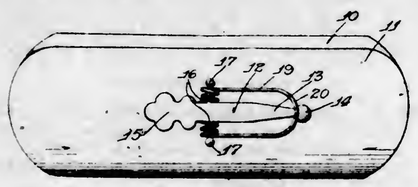
rear plate, grooves at the top and bottom edges of the rear open side of the casing, a plate of clear glass slidable in said grooves wholly closing the rear open side of said casing, and a lamp located behind the plate of colored glass adapted to simultaneously illuminate the aperture in the plate of opaque material and the license number therein and to direct rays of light through the rear side of said casing substantially for the purposes set forth.

1,385,007. BERMUDA-GRASS CUTTER AND LAWN-AERATOR. ANDREW J. KERR, Los Angeles, Calif., assignor of fifty-one per cent. to ANNA M. PACHMAYR, Los Angeles, Calif. Filed Nov. 18, 1920. Serial No. 424,887. 6 Claims. (Cl. 56—249.)



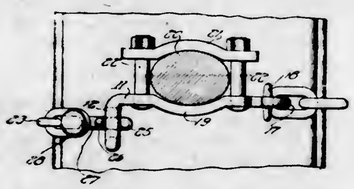
1. In a lawn-mower attachment, the combination with a shaft adapted to be substituted for the roller, of circular disk cutting elements mounted thereon, and spacing elements disposed between the cutting elements.

1,385,008. PORT-COOLER FOR REVERSING REGENERATIVE FURNACES. LUTHER L. KNOX, Bellevue, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 27, 1918. Serial No. 225,123. 3 Claims. (Cl. 122—6.5.)



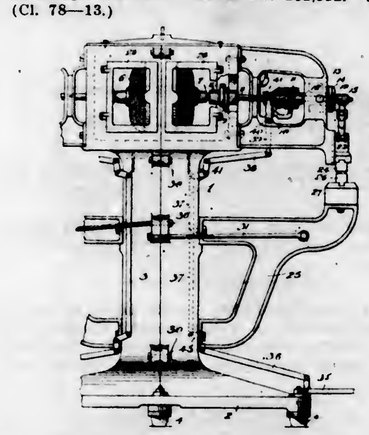
3. A port cooler for the gas ports of reversing regenerative furnaces, comprising a hollow sheet metal box-like structure having an arched port opening extending therethrough, a water inlet pipe extending longitudinally of the structure below the said opening and having discharge branches at opposite sides of said opening, the central portion of the structure above said opening having a closed top dome, and an outlet connection for hot water and steam extending within said dome, said end portions

constituting the major portion of the total length of the structure and being of a depth to extend at least as low



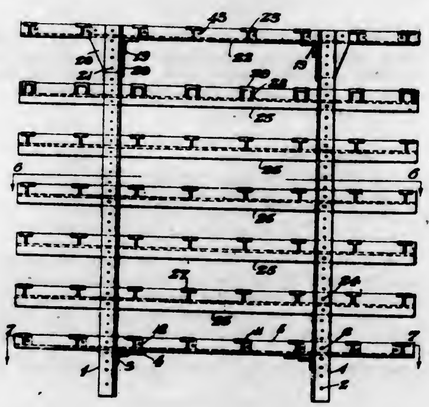
as the floor level of said port, whereby the said opening is completely inclosed at its sides, substantially as described.

1,385,009. CLASP. PAUL A. KOPP and JOHN P. KOPP, Tulsa, Okla. Filed June 30, 1919. Serial No. 307,592. 2 Claims. (Cl. 24—3.)



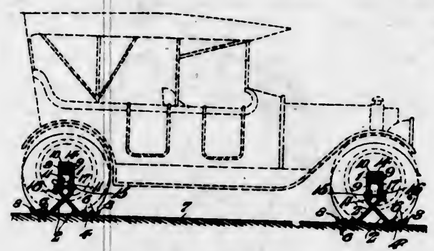
1. The combination with an article to be held, of a clasp strip pivoted thereto in spaced relation to it and having a clasping terminal portion disposed to lie normally against said article and a spring wire associated with the clasp strip for holding the clasping terminal in coöperative clasping relation to the article, the spring wire between the clasping terminal of the strip and the pivot of the strip being in close spaced relation to the article for clasping action thereagainst supplemental to the terminal of the clasping strip.

1,385,010. ANTISKID DEVICE. WILLIAM H. KRUG, Fond du Lac, Wis. Filed Aug. 6, 1919. Serial No. 315,597. 7 Claims. (Cl. 152—2.)



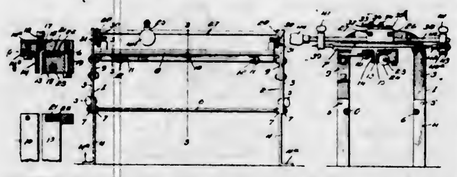
3. Means for securing an anti-skid chain to a vehicle wheel comprising a clamping bar having a hook at one end lying substantially in the plane of said bar, the other end of said bar terminating in a portion bent at substantially right angles to the adjacent portion and provided with means for securing one end of an anti-skid chain.

1,385,011. HAMMERING-MACHINE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1917. Serial No. 161,552. 2 Claims. (Cl. 78—13.)



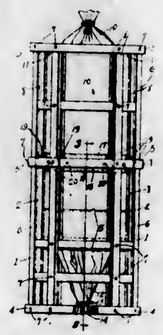
1. In a self contained sheet metal hammering machine, a supporting column, a motor mounted centrally in the upper end of said column, hammer device supporting frames secured to the upper end of said column and extending laterally therefrom at opposite sides thereof, means actuated by said motor for operating the hammer devices, and an anvil supporting bracket mounted upon said column near the lower end and extending laterally from each side thereof in coöperative relation with respect to the hammer device supporting frames whereby the reactions of the hammer devices are transmitted to and centered in the supporting column.

1,385,012. CORE OR OTHER RACK. ALBERT H. LEVENE, Philadelphia, Pa. Filed Dec. 11, 1919. Serial No. 344,225. 2 Claims. (Cl. 211—27.)



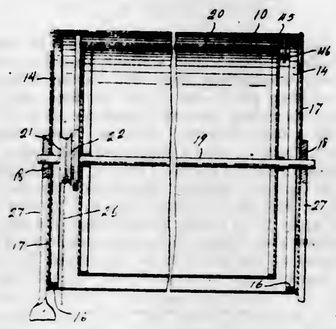
1. In a rack, corner standards, laterally extending structural metal bars supported by said standards and having upwardly directed flanges provided with T-shaped recesses opening through the tops of the flanges, and T-bars disposed at an angle to said bars and seated in the recesses of said flanges, said T-bars having their webs recessed to fit over said flanges, whereby relative movement of said T-bars with respect to said flanged bars except in an upward direction is prevented.

1,385,013. BRACE FOR SHIPPING VEHICLES. ALBERT H. LEVENE, Philadelphia, Pa. Filed Feb. 12, 1920. Serial No. 358,286. 6 Claims. (Cl. 188—82.)



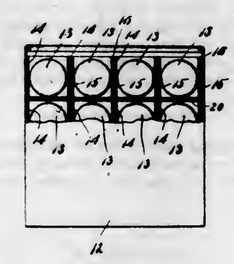
1. A brace for shipping vehicles, comprising a metal bar having an upwardly extending portion which terminates at its upper end in a lateral extension to limit the upward movement of a vehicle axle and having the side wall of said upwardly extending portion adapted to engage the side of an axle, the lower end of said bar being adapted to be secured to the platform of a car, whereby relative longitudinal movement of a vehicle and the platform on which it is shipped is prevented and limited vertical movement is permitted.

1,385,014. SAW-FILING DEVICE. HENRY LOGEL, Muskegon, Mich. Filed Aug. 4, 1920. Serial No. 401,112. 5 Claims. (Cl. 76—33.)



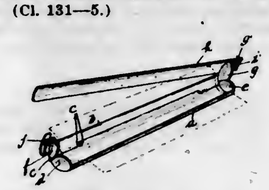
4. In a saw filing machine, a supporting frame, a file carriage mounted for longitudinal adjustment on said frame, a file holder mounted to reciprocate in said carriage transversely of the frame, and a saw clamp mounted on said frame below said carriage to swing in a horizontal plane to position the saw relatively to the file.

1,385,015. BANANA-CRATE. AUGUST LOMBARDO, Mason City, Iowa. Filed Sept. 2, 1919. Serial No. 321,096. Renewed June 3, 1921. Serial No. 474,767. 1 Claim. (Cl. 217—52.)



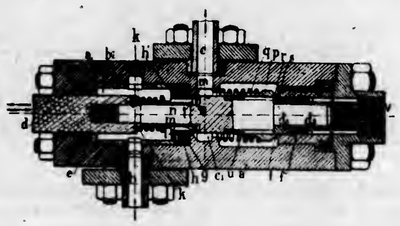
In a shipping crate, a protecting casing and an inner supporting casing, a cushioning bag supported within the protecting casing, means adjacent the upper end of the bag for supporting the same, a supporting hoop adjacent the lower end of the supporting casing, a strip of canvas embracing the supporting hoop, said strip of canvas having its ends extending upwardly and connected to the cushioning bag at a point above the supporting hoop.

1,385,016. SIGNAL-INDICATOR FOR AUTOMOBILES. JOHN G. LUCAS, Dearborn, Mich. Filed Oct. 6, 1920. Serial No. 414,979. 4 Claims. (Cl. 116—43.)



1. In an automobile signal, an outer casing comprising a tubular sheet metal portion provided with a longitudinal slot, the metal at the edges of said slot being crimped to afford guide grooves, a transparent medium closing said slot and having its longitudinal edges disposed within said guide grooves, the ends of said tubular member being likewise crimped to form an annular groove, end plates for said casing embodying an annular flange adapted to engage in said annular grooves and a drum rotatably mounted within said casing provided upon the exterior thereof with indicatory symbols alinable with the slot of said casing.

1,385,017. MERCHANDISE-PACKAGE. GEORGE C. MACDONALD, Elmhurst, N. Y. Filed May 1, 1920. Serial No. 378,120. 1 Claim. (Cl. 206—46.)

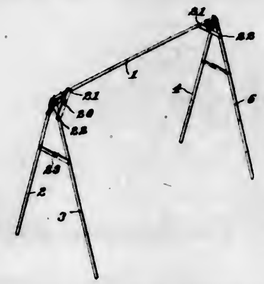


A merchandise package comprising a shipping container, a plurality of cartons containing segregated charges of merchandise and arranged in tiers in the container, and hinged covers associated with the cartons and turned back back against side walls of the cartons, whereby the cartons of each tier are cushioned and confined against loose lateral movement, and charges in packed cartons are exposed for inspection, each cover being movable to a position substantially concealing the charge in the accompanying carton, and securable in said position to confine the charge, when the carton is removed from the container.

1,385,018. CIGARETTE-FORMER. JAMES MACDONNELL, Haverhill, Mass. Filed Apr. 28, 1919, Serial No. 293,059. Renewed June 7, 1921. Serial No. 475,835. 6 Claims. (Cl. 131—5.)

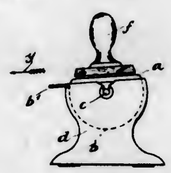
3. A cigarette former comprising a pair of elongated correspondingly shaped mold sections pivotally connected at adjacent longitudinal edges and having transversely concave molding faces, one of said sections being longitudinally divided from one end, intermediate its side edges, to provide a main member, which is directly connected to the other section, and a supplemental member, means at the opposite end for normally holding said supplemental member in cigarette forming relation with the main member, and in position to permit one end portion of the cigarette paper to be passed therebetween, the exterior of said supplemental member being constructed to permit the end portions of the paper to be overlapped thereon and pressed thereagainst, to connect said end portions adhesively.

1,385,019. HYDRAULIC VALVE. EUGÈNE MATHIEU, Neuilly-sur-Seine, France. Filed Apr. 9, 1920. Serial No. 372,645. 3 Claims. (Cl. 138—16.)



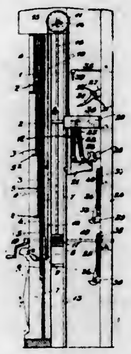
1. In a high pressure distributing valve, the combination of a movable member, a packing sealing a continuous rubbing surface of said member, an outlet in the wall thereof closed while passing the packing and means for opening the outlet as soon as the packing has been passed thereby.

1,385,020. COMBINED CYCLE STAND AND LOCK. EDWARD MAURICE, Melbourne, Victoria, Australia. Filed Dec. 21, 1920. Serial No. 432,263. 6 Claims. (Cl. 208—75.)



5. In a combined cycle stand and lock, a hinged stand adapted to support the machine frame; a pivoted arm adapted to connect the machine frame and the hinged stand and having means to accommodate a locking element for the purpose of maintaining the hinged stand in predetermined position relative to the machine frame; and means for maintaining the pivoted arm in idle position.

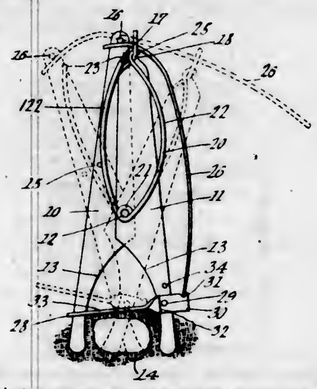
1,385,021. FOLDING FRAME. HARRY MINTZ, Boston, Mass. Filed June 3, 1920. Serial No. 386,383. 9 Claims. (Cl. 5—32.)



1. A folding frame comprising in combination a transversely extending hammock support, a bracket fixedly secured to said support and having an angularly disposed ear, a leg member permanently and pivotally secured to said ear and constructed and arranged to swing in a plane substantially parallel to the axis of the support and a foldable brace having its opposite extremities pivotally secured to said support and leg, respectively.

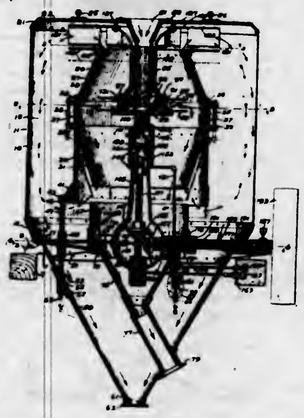
1,385,022. STAMP-INKING PAD. NATE MOCK, London, England. Filed July 2, 1920. Serial No. 393,577. 2 Claims. (Cl. 91—54.5.)

1. A stamping pad including a casing, a pad rotatably mounted within the casing, said pad having an ink delivering surface, said ink delivering surface adapted to normally lie within the casing and said pad having means to be engaged by a stamp for moving the ink delivering surface to a position exteriorly of the casing.



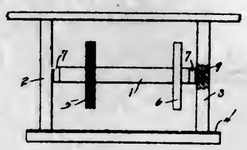
1,385,023. METALLIC CURTAIN. ANDRES PARODI and JOSE BORELLO, Buenos Aires, Argentina. Filed June 1, 1918. Serial No. 237,779. 3 Claims. (Cl. 189—60.)

1. A curtain device having a series of relatively movable coöperating sections, abutments on said sections adapted



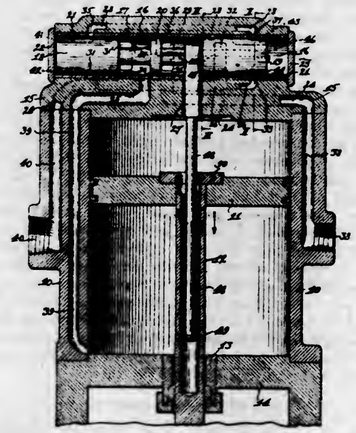
to engage another section, a reversible drum, means operatively connecting the lowermost section with said drum, means to revolve said drum to successively raise and lower said sections, a counterbalance connected with said drum and movable in a direction opposite to that of said sections, and means automatically to increase and decrease the weight of said counterbalance in proportion to the increase or decrease in the weight of said sections.

1,385,024. MOLE-TRAP. MANNING W. RUSSELL, Curtis, La. Filed Feb. 7, 1920. Serial No. 356,929. 5 Claims. (Cl. 43—88.)



1. A mole trap comprising jaws; a pivot element uniting the jaws intermediate their ends; a V-shaped spring connected to the jaws at one end of the jaws and provided with oppositely disposed coils located adjacent to the pivot element; a latch strip carried by the above specified end of one jaw and movably engaged with the corresponding end of the other jaw whereby, when said ends of the jaws are moved toward each other, the strip will extend longitudinally of the jaws; and oppositely disposed triggers pivoted to one jaw at the extremity of the strip and provided with notches engaging said extremity of the strip to hold the opposite ends of the jaws spaced, the triggers projecting laterally beyond the jaws and being upwardly movable to release the strip.

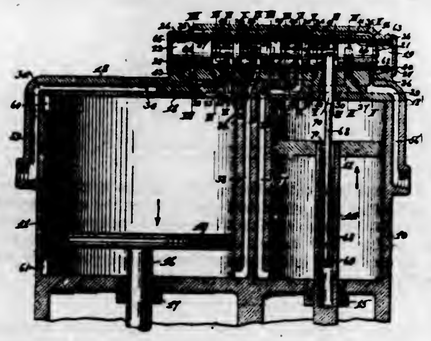
1,385,025. AIR-SEPARATOR. THOMAS J. STUARTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed May 15, 1919. Serial No. 297,291. 14 Claims. (Cl. 83—40.)



1. A separator, comprising, in combination, outer and inner chambers communicating to allow an air circuit therethrough including upward air currents in one and downward air currents in the other, a foundation member for supporting said outer chamber, posts beneath the inner chamber projecting through said foundation member for supporting the said inner chamber, and means longitudinally to adjust said posts to vary the elevation of the inner chamber in the outer chamber.

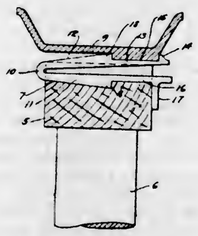
1,385,026. BOX BULL AND CALF WHEEL GUDGEON. JAMES THOMAS TAYLOR, Fort Worth, Tex. Filed Apr. 28, 1921. Serial No. 465,337. 5 Claims. (Cl. 64—41.)

3. A bull and calf wheel shaft gudgeon comprising the combination of a cylindrical shaft having the ends thereof polygonal in cross-section shape and a gudgeon for each end of the shaft having a cylindrical body countersunk in the surface of said shaft and having a polygonal shaped cavity receiving the end of the shaft.



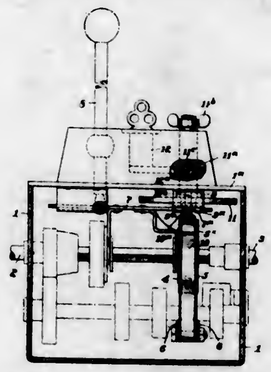
1,385,027. ENGINE. PEIRCE VAN VLECK and HOWARD COOPER, Baltimore, Md., assignors to William H. Peirce, Baltimore, Md. Filed May 22, 1920. Serial No. 383,482. 2 Claims. (Cl. 121—153.)

1. A non-rotative motor comprising a cylinder, a piston reciprocating within said cylinder, combined live fluid and exhaust ports leading to opposite ends of the cylinder, a live fluid pressure port and an exhaust port, a chest at one end of the cylinder and having a series of openings communicating with the live pressure and exhaust ports and ports leading to the opposite ends of the cylinder, a combined oscillating and fluid actuated reciprocating distributing valve within said chest and having ports so constructed and arranged to coöperate with said series of openings communicating with the live fluid pressure exhaust ports and ports leading to the opposite ends of the cylinder to admit live fluid pressure on opposite sides of the piston to reciprocate said piston and exhaust said fluid from the cylinder and admit live fluid pressure within the chest and on each end of the distributing valve and exhaust said fluid from the chest, and a single valve rod whose axis is eccentrically arranged with respect to the axis of the valve and actuated by the reciprocation of the piston and freely passing through the port leading



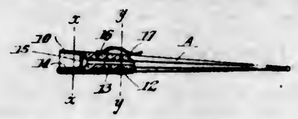
into the cylinder at the end nearest to the chest for oscillating said reciprocating distribution valve and without in any way obstructing the passage of the live fluid into or exhaust of expanded fluid from the cylinder.

1,385,028. COMPOUND ENGINE. PEIRCE VAN VLECK and HOWARD COOPER, Baltimore, Md., assignors to William H. Peirce, Baltimore, Md. Filed Sept. 28, 1920. Serial No. 413,254. 6 Claims. (Cl. 121—108.)



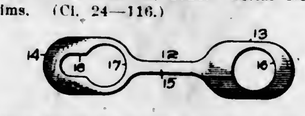
1. A cross-compound engine comprising a high pressure cylinder, a low pressure cylinder, a piston reciprocating within each of said high and low pressure cylinders, a live fluid pressure port and an exhaust port, ports leading to the opposite ends of said high and low pressure cylinders, a chest having a series of openings communicating with the live fluid pressure and exhaust ports and ports leading to the opposite ends of said high and low pressure cylinders, a combined oscillating and reciprocating distributing valve within said chest and having ports so constructed and arranged to coöperate with said series of openings communicating with the live fluid pressure and exhaust ports and ports leading to the opposite ends of said high and low pressure cylinders to admit live fluid pressure on opposite sides of the piston in the high pressure cylinder and direct the expanded fluid within said high pressure cylinder to the opposite sides of the piston within the low pressure cylinder and the expanded fluid within the low pressure cylinder to the exhaust port and admit live fluid pressure within the chest and on each end of the distributing valve to reciprocate the same and exhaust said fluid from the chest, and means actuated by the reciprocating of a piston for oscillating said reciprocating distribution valve.

1,385,029. DEMOUNTABLE-RIM WEDGE. GEORGE EMMETT VOORHEES, Jr., Santa Barbara, Calif. Filed May 11, 1920. Serial No. 380,548. 4 Claims. (Cl. 301—20.)



1. In a wheel having a fixed rim provided with a plurality of recesses, each having a shoulder, the combination of a plurality of expansible wedges, each wedge having a face provided with a projection to rest against a shoulder, and a demountable rim having an internal shoulder, each wedge being provided with a shoulder on its opposite face to rest against the shoulder on said rim.

1,385,030. MOTOR-VEHICLE LOCK. GLENN T. WATT, Minden, Nebr. Filed Aug. 30, 1920. Serial No. 406,841. 10 Claims. (Cl. 70—126.)



1. The combination with a change speed mechanism embodying sliding gears, of a pair of spring pressed detent levers arranged on opposite sides of one of said gears to engage the teeth thereof, a pair of actuating levers associated with said detent levers and having a lost motion connection therewith, manually controlled means for simultaneously moving said actuating levers, and a locking device for said manually controlled means.

1,385,031. EJECTOR FOR CIGARETTE-HOLDERS. MILES E. BAILEY, Ottawa, Ontario, Canada. Filed May 27, 1919. Serial No. 300,232. 1 Claim. (Cl. 131—10.)

In combination with a cigarette holder having a socket in the end thereof and provided with a groove in the wall of the socket, and a longitudinally extending groove in the outer wall of the holder, an ejector formed with an ejecting finger on one end bent to form a hook and slidably engage with the groove in the wall of the socket, the end of the finger being turned laterally and designed to abut the end of a cigarette, a stud carried by the ejector and coacting with the groove in the outer wall of the holder, a split ring engaging with the ejector, and a spring finger carried by the split ring.

1,385,032. CHAIN-ATTACHING DEVICE. MARK BAKER, Worcester, Mass., assignor to Worcester Pressed Aluminum Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 13, 1920. Serial No. 430,367. 3 Claims. (Cl. 24—116.)

3. A chain attaching device comprising a headed stud and a link formed of non-resilient material, said link having openings at each end through which the head of said stud may be passed and one of said openings having a narrow extension toward the adjacent end of said link adapted to receive the stem of said stud, the intermediate portion of said link being relatively narrow and easily bent after the parts are assembled.

1,385,033. PAINT VEHICLE FOR ANHYDROUS PIGMENTS. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed June 12, 1917. Serial No. 174,255. 5 Claims. (Cl. 134—56.)

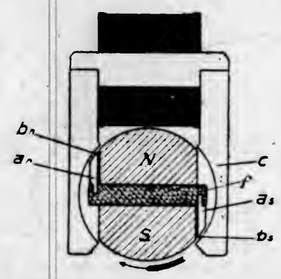
1. A paint-vehicle comprising a fatty oil; and a mineral oil of the Texas oil type.

1,385,034. PAINT COMPOSITION. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed June 12, 1917. Serial No. 174,256. 10 Claims. (Cl. 134—56.)

1. A paint-composition comprising a mineral oil of the Texas oil type, and an anhydrous pigment.

1,385,035. MINERAL OIL. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Feb. 9, 1921. Serial No. 443,671. 3 Claims. (Cl. 134—56.)

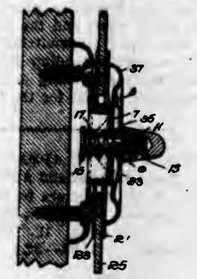
1. As a new composition of matter, a mixture of a mineral oil of the Texas oil type, and tung oil.



1,385,036. MINERAL OIL. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Feb. 9, 1921. Serial No. 443,672. 3 Claims. (Cl. 134—56.)

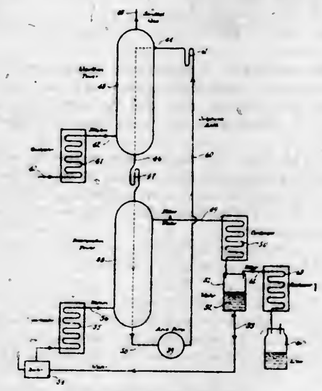
1. A mixture of a mineral oil, of the Texas oil type, oxidized, and a fatty oil.

1,385,037. MINERAL OIL. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Feb. 9, 1921. Serial No. 443,673. 10 Claims. (Cl. 134—56.)



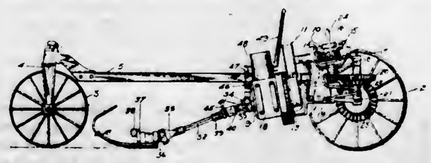
1. A mineral oil, of the Texas oil type, hydrogenated.

1,385,038. ROTOR FOR MAGNETO-ELECTRIC MACHINES. JACQUES BOHLI, Obach, Solothurn, Switzerland, assignor to Firm Scintilla, Solothurn, Switzerland. Filed Nov. 6, 1918. Serial No. 261,430. 1 Claim. (Cl. 171—209.)



In an ignition generator the combination with an induced member comprising a yoke and spaced pole pieces of magnetic material of an inducing member positioned between said pole pieces and relatively movable thereto, and having magnetically polarized projections equal in number to the pole pieces, and auxiliary pole tips of magnetic material located on the trailing edges of the rotor poles and magnetically insulated therefrom, whereby the reluctance of the flux path is gradually varied during the revolution of the rotor.

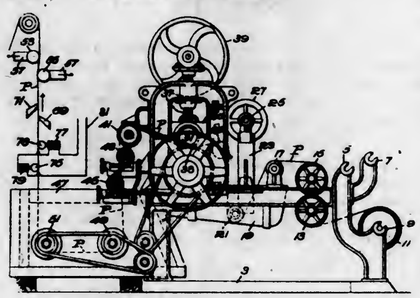
1,385,039. TURNBUTTON-FASTENER. DAVID BOURQUE, Amesbury, Mass., assignor to G. W. J. Murphy Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1920. Serial No. 349,749. 12 Claims. (Cl. 24—221.)



1. An eyelet for a turnbutton fastener having an oblong opening and a face gradually inclining upwardly to the minor axis of the opening providing cam surfaces over which the turnbutton head may ride in movement to traversing position.

1,385,040. PRODUCTION OF ETHER. CHARLES S. BRADLEY, New York, N. Y., assignor to American Cellulose & Chemical Manufacturing Company, Limited, New York, N. Y. Filed Nov. 20, 1919. Serial No. 339,336. 1 Claim. (Cl. 23—24.)

The method of producing ether which comprises absorbing ethylene in sulfuric acid at about 140° C. and introducing into the mixture superheated steam at a temperature higher than the boiling point of the acid to keep the strength of the acid substantially constant.

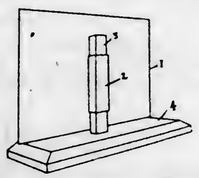


1,385,041. MOTOR AGRICULTURAL MACHINE. ALEXANDER T. BROWN, Syracuse, N. Y. Filed July 15, 1918. Serial No. 245,024. 2 Claims. (Cl. 56—25.)

1. In an agricultural machine, the combination of a frame, a drive wheel, an implement including a movable

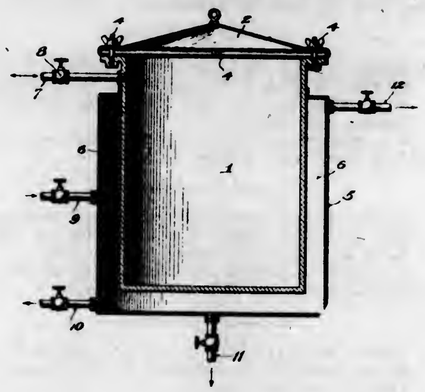
member, a motor having a drive shaft and located with its drive shaft extending lengthwise of the frame and the drive wheel being located to the rear of the motor and the implement near the front end of the frame and in front of the motor, and independently operable and controllable power transmitting means between the rear end of the motor shaft and the drive wheel and between the front end of the motor shaft and the movable member of the implement, the power transmitting means connected to said movable member extending forwardly from the front end of said shaft and being arranged end to end therewith, substantially as and for the purpose described.

1,385,042. METHOD OF AND APPARATUS FOR WAXING PAPER. JOHN DECKER and ADOLPH CHARLES VAN SLUYS, Nashua, N. H., assignors to Nashua Gummed & Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed Aug. 19, 1920. Serial No. 404,603. 16 Claims. (Cl. 91—32.)



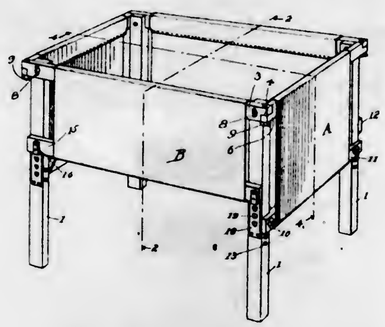
1. The method of making wax paper which comprises first coating the same with heated wax, then finishing the surface, then setting the wax by subjecting it to the action of a water bath and then removing the water by suction.

8. In a machine for making wax paper the combination with paper guiding, feeding means, of means for applying heated wax thereto, means for subjecting it during travel to the action of a cooling bath and a suction member for removing moisture.



15. In a machine for making wax paper, the combination with paper guiding, feeding means, of means for applying heated wax thereto, means for subjecting it during travel to the action of a cooling bath, and means for removing moisture from the paper web, the same comprising means for vibrating the web after leaving the bath, and pneumatic means for removing the surplus moisture.

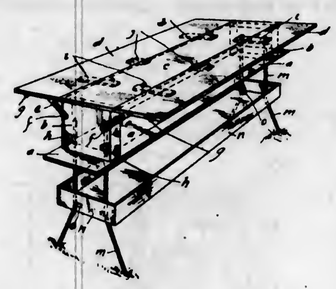
1,385,043. COLLAPSIBLE SLIP-ON. MILTON S. DUNKELBERGER, Dayton, Ohio. Filed June 1, 1920. Serial No. 385,507. 1 Claim. (Cl. 40—125.)



In a device of the type described, the combination with a base, of a standard projecting upwardly from its middle portion, a display card adapted to rest on said base, and a collapsible tubular member applied to the rear surface of said card, adapted to be slipped on said standard to hold said card in a vertical position on said base.

1,385,044. PROCESS OF PRODUCING CELLULAR MATERIAL. KARL H. FULTON, Pittsburgh, Pa. Filed May 6, 1920. Serial No. 379,308. 9 Claims. (Cl. 18—53.)

1. The process of producing cellular rubber, comprising mixing rubber with gas occluded particles, in subjecting the mixture to the presence of gas under pressure to be absorbed by said gas occluded particles, in vulcanizing the material while being subjected to the gas pressure, in allowing the material to then cool, and in finally heating the material to cause the occluded gas to be discharged from the particles forming in the material a multitude of gas cells.

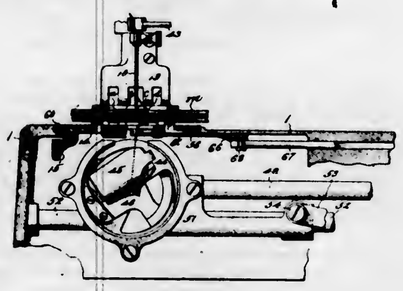


1,385,045. BED. THOMAS H. GRIFFITH, Cincinnati, Ohio. Filed Jan. 31, 1919. Serial No. 274,359. 3 Claims. (Cl. 5—58.)

1. A bed comprising a frame of corner posts, an upper and lower set of bars at the sides and ends, flexible webbing stretched across the frame in two directions, one of the side bars of the lower set having an adjustable mounting means on the corner posts, for the purpose described.

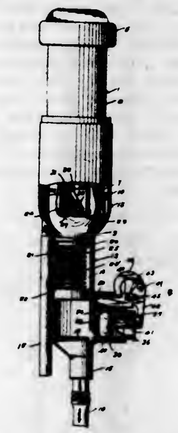
1,385,046. CONVERTIBLE TABLE. JOHN E. HARDY, Portland, Oreg. Filed Feb. 9, 1920. Serial No. 357,352. 3 Claims. (Cl. 190—12.)

1. In a camp table, the combination of a case-like body, legs adapted for being removable fastened in the ends of the case the lower ends of the legs being bent at coincident angles, and a flanged cover adapted for being



mounted on said legs so as to form a shelf therewith, and at the same time to hold said legs rigid.

1,385,047. THREAD-GUIDE AND MEANS OF ATTACHMENT. FERDINAND Q. HARTMAN, Danville, Pa. Filed Apr. 14, 1920. Serial No. 373,748. 5 Claims. (Cl. 242—157.)



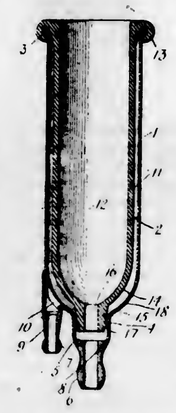
3. In a device of the character described, a thread guide lever having an opening for the reception of a guide eye, and a guide eye having a body portion composed of spring wire, said body portion of the guide eye being provided with a hump, whereby the body portion of the guide eye may be compressed and inserted into the opening with its hump protruding from one end thereof for holding the eye in position on the lever.

1,385,048. THREAD-CONTROLLING DEVICE FOR SEWING-MACHINES. PARK A. HERR, Hillside, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 27, 1918. Serial No. 246,984. 5 Claims. (Cl. 112—159.)

1. In a lock stitch sewing machine, in combination, upper thread mechanism including a reciprocating needle, cooperating lower-thread mechanism including a loop-taker, means for producing relative jogging movement between both needle and loop-taker and the work, means engaging the lower thread leading from the last stitch to position the same in substantial alinement with the location of the succeeding stitch in either direction, and means acting upon the upper thread for setting the stitch.

1,385,049. AUTOMATIC STOP FOR MILKING-MACHINES. ERNEST D. HOLMES, Athens, Ga. Filed July 23, 1920. Serial No. 398,335. 20 Claims. (Cl. 31—101.)

1. In combination, a teat cup held to a teat by having the air displaced therein and a vacuum tube, a casing connecting the tube and cup and having the air pressure therein decreased and increased at intervals and at a pressure below atmospheric pressure, a milk receiving means in the cup and having communication with the casing, a valve in said means, means reciprocated by the increase and decrease of air pressure for opening and closing the valve, and means adapted to admit atmospheric pressure to the casing and cup on the exhaustion of milk from the teat.



4. In combination, a teat cup held to a teat by having the air displaced therein and a vacuum tube, a casing connected to the tube and cup and having the air pressure therein decreased and increased and at a pressure below atmospheric pressure, milk receiving means in the cup, a valve chamber connected to said means, a valve in said chamber, means mounted for reciprocation in the casing and adapted to unseat and seat the valve, said last means being reciprocated by the increase and decrease of air pressure, and means adapted to admit atmospheric pressure to the casing and cup on the exhaustion of milk from the teat.

7. In combination, a teat cup held to a teat by having the air displaced therein and a vacuum tube, a casing connected to the tube and cup and having the air pressure therein decreased and increased and at a pressure below atmospheric pressure, milk receiving means in said cup, a valve chamber connected to said means, a valve in said chamber, a tube connected to the valve chamber and having communication with the cup, a plunger reciprocally mounted in the casing and tube and adapted to unseat and seat the valve and be reciprocated by the increase and decrease of air pressure, and means adapted to admit atmospheric pressure to the casing and cup on the exhaustion of milk from the teat.

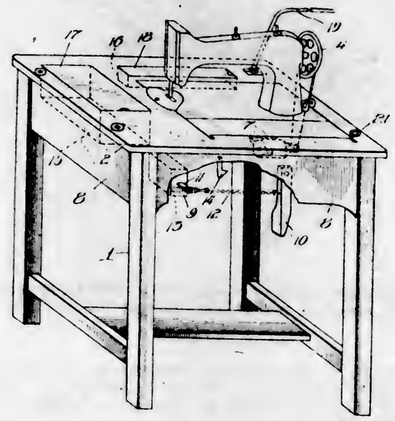
11. In combination, a teat cup held to a teat by having the air displaced therein and a vacuum tube, a casing connected to the tube and cup and having the air pressure therein decreased and increased and at a pressure below atmospheric pressure, a valve chamber connected to said cup, a valve in said chamber, a tube connected to the valve chamber and extending into the casing and having openings in communication with the cup, a plunger reciprocally mounted in the casing and tube, a spring connected to the plunger and casing for normally urging the plunger upwardly to unseat the valve, said plunger adapted to be moved downwardly by the decrease of air pressure in the casing, and means adapted to admit atmospheric pressure to the casing and cup on the exhaustion of milk from the teat.

18. In combination, a teat cup held to a teat by a vacuum, and a vacuum tube, a casing connecting the tube and cup and having the air pressure therein decreased and increased and at a pressure below atmospheric pressure, a milk receiving means in the casing, a valve for said means, a valve actuating means in said casing, a housing having communication with the casing, a member slidable in said housing and having a vent opening and moved toward the casing by atmospheric pressure and limited in said movement by the valve actuating means during its operation and adapted to move within the casing on discontinuance of the operation of said valve actuating means, means for operating the member in an opposite direction, and means for opening and closing the vent opening at certain positions of the member.

1,385,050. TEAT-CUP. HERBERT MCCORNACK, Glen Ridge, N. J., assignor to Empire Cream Separator Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Nov. 21, 1917. Serial No. 203,137. 18 Claims. (Cl. 31—102.)

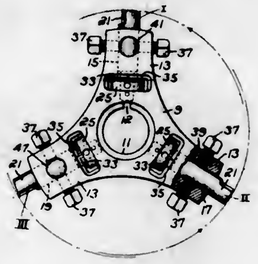
1. In a teat cup of the character described, the combination of a casing and a flexible lining held in said casing at its lower end by suction.

3. In a teat cup of the character described, the combination of a casing and a flexible lining held in said casing by frictional engagement and suction only.



7. In a teat cup of the character described, the combination of a casing having a pocket at the lower end thereof and a flexible lining in said casing having a neck held in said pocket by yielding, frictional engagement.

11. In a teat cup of the character described, the combination of a casing having a pocket of reduced diameter at its lower end and a flexible lining mounted in said casing and having a neck extending into said pocket, the lower end of said casing extending beyond the end of said neck and carrying a discharge nipple.

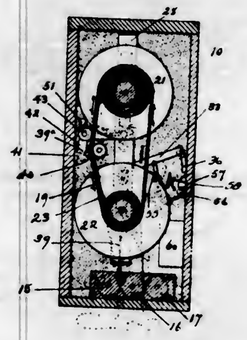


18. A teat cup casing comprising a main body part inclosing an outer teat cup chamber and having an extension of reduced diameter inclosing a pocket the inner side wall of which is substantially cylindrical and merges into the lower part of the chamber wall, a nipple carried by said extension and having a discharge orifice opening into said pocket and a second nipple opening into the main portion of the casing.

1,385,051. COMBINATION SEWING-MACHINE AND TABLE. GEORGE H. RIDDELL, Buffalo, N. Y., assignor to Domestic Sewing Machine Co. Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 6, 1918. Serial No. 226,970. 1 Claim. (Cl. 45—27.)

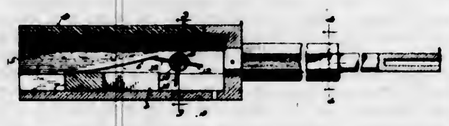
In combination, a table having a depending skirt like part around the upper portion thereof, a sewing machine head adapted to be concealed below the top of the table and behind said skirt-like part, a controlling device for the sewing machine mounted on the under side of the table so as to be movable from a position in which it extends down to about the level of the knee of an operator seated at the table to a position in which it is concealed by said skirt-like part and a catch for holding said controlling device in the latter position.

1,385,052. BORING AND MILLING TOOL. HARRY SARGESON, Beverly, Mass. Filed Nov. 21, 1919. Serial No. 339,667. 12 Claims. (Cl. 29—105.)



1. A tool of the class described comprising a rotatable stock having radial cutter-receiving sockets disposed at successively increasing distances from the face thereof and axial cutter-receiving sockets disposed at successively increasing distances from the center thereof, and means for supporting cutters in the first with provision for radial adjustment and in the second with provision for axial adjustment.

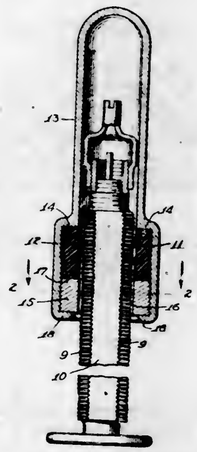
1,385,053. TOWEL-VENDING MACHINE. CLARENCE E. SHANKLIN and CLARENCE B. BURGE, Boston, Mass. Filed Aug. 14, 1920. Serial No. 403,543. 12 Claims. (Cl. 45—32.)



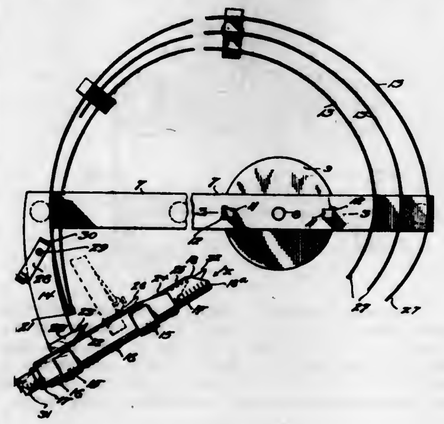
1. A towel vending machine having, in combination, a delivery roll, a take-up roll, a strip of toweling wound around said delivery roll and extending to and around said take-up roll, a spool fast to each of said rolls, a band of sheet material wound around said spools to correspond to the toweling wound around said rolls, means to rotate said take-up roll and an endless belt extending around said spools upon said band and driven by frictional engagement with said band.

12. A towel vending machine having, in combination, a delivery roll, a take-up roll, a strip of toweling wound around said delivery roll and extending to and around said take-up roll, a spool fast to each of said rolls, a band of sheet material wound around said spools to correspond to the toweling wound around said rolls, means to rotate said take-up roll, an endless belt extending around said spools upon said band and driven by frictional engagement with said band, a ratchet wheel fast to each of said rolls, a sliding bar, pawls fast to said sliding bar adapted to engage said ratchets to prevent

the rotation of said rolls in one direction, means to prevent the rotation of said rolls in a reverse direction, means to raise said bar to disengage said pawls from said ratchets, a dog adapted to hold said bar in its raised position, a bell, a striker fast to said dog and means operated by said endless belt adapted to rock said dog and thereby release said bar and allow said pawls to again engage said ratchets and also ring said bell, and coin operated means to prevent said sliding bar from being raised.



1,385,054. TOY MACHINE-GUN. FLOYD H. SOMMERS, Bowling Green, Ohio. Filed Feb. 3, 1920. Serial No. 356,022. 2 Claims. (Cl. 46—46.)

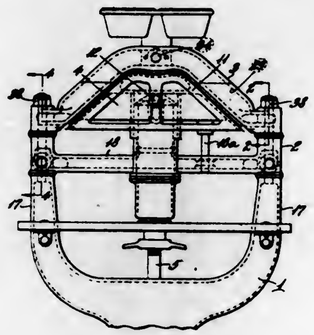


1. A toy machine gun comprising a breech member, a barrel member projecting from the forward end thereof and comprising a plurality of sections diminishing in diameter from breech to mussle, the breech section having contained therein a sounding mechaniam comprising a recessed block carrying a resilient clapper positioned over the recess thereof, a spur wheel projecting into said recess and engaging said clapper and actuated by a cranked handle member carried by the supporting shaft of said wheel on the exterior of the breech member.

1,385,055. DUST-CAP FOR PNEUMATIC TIRES. WILLIAM O. VIVARTTAS, Weehawken, N. J. Filed Mar. 25, 1920. Serial No. 368,492. 2 Claims. (Cl. 152—12.)

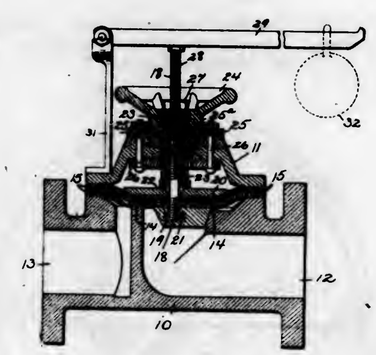
1. A dust cap for service with a pneumatic valve embodying a mutilated cylindrical stem, said cap comprising a tubular body closed at one end for enfolding freely said stem; an open-centered ram held permanently in said body, the opening in said ram being shaped in correspondence with said stem for holding said ram on said stem nonrotatively to move freely lengthwise thereover; an open-centered yielding packing member supported within said body for distention to engage said stem; and means operatively connecting said body and said ram for moving said body toward said ram for distending said member when said body is rotated.

1,385,056. REPEATING DEVICE FOR TALKING-MACHINES. GEORGE F. VOITH, Philadelphia, Pa. Filed Oct. 1, 1920. Serial No. 413,989. 11 Claims. (Cl. 274—15.)



1. A device of the character described including a transfer portion for a reproducing element; and a switch for moving said transfer portion; substantially as described.

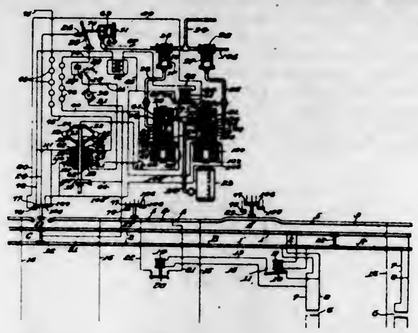
1,385,057. PRESSING-MACHINE. CHARLES E. WARRAM and GEORGE N. LINK, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 18, 1919. Serial No. 305,048. 16 Claims. (Cl. 68—9.)



1. A pressing machine, comprising a hollow pressing member, a cooperating presser, said pressing member and

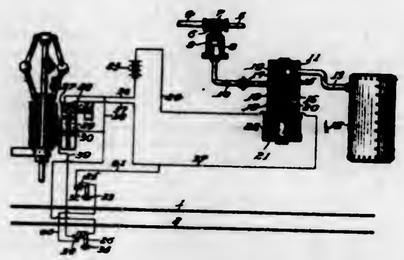
presser being relatively movable, a hollow heating member therefor, and means for securing said members to-

gether, said means also providing communication between the chambers of said hollow members.



1,385,058. VALVE. FRANK A. WARTER, Perth Amboy, N. J. Filed May 29, 1920. Serial No. 385,160. 7 Claims. (Cl. 251—1.)

1. A valve comprising a casing having inlet and outlet ports with a valve seat between them, a diaphragm disposed so as to be forced on the seat to close it, a stem secured to the diaphragm, and a sleeve movable longitudinally in the casing and adapted to lock the diaphragm in closed position, the stem being slidable in the sleeve.

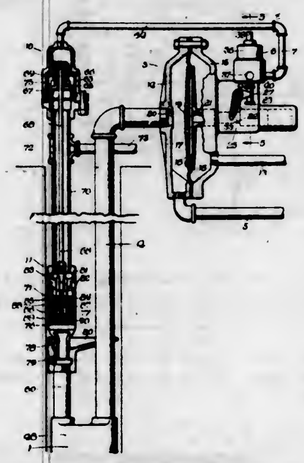


1,385,059. TRAIN-CONTROLLING DEVICE. FRANK C. WILLIAMS, Philadelphia, Pa., assignor to The Safety Block Signal Company, a Corporation of Delaware. Filed Jan. 9, 1917. Serial No. 141,355. 7 Claims. (Cl. 246—31.)

1. In an automatic train controlling mechanism, the combination of means for stopping and controlling the speed of a train, a main electric circuit for supplying energy for propelling a train, a shunt circuit connected to said main electric circuit for supplying energy to said first mentioned means to normally maintain the same inoperative, auxiliary means for automatically controlling the speed of the train at certain points in the line, an auxiliary electric circuit therefor and common means

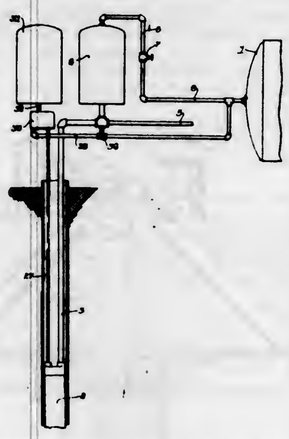
for substituting said auxiliary circuit for said main circuit and for controlling said auxiliary train controlling means.

1,385,060. AUTOMATIC TRAIN-SPEED-CONTROLLING MECHANISM. FRANK C. WILLIAMS, Philadelphia, Pa., assignor to The Safety Block Signal Company, a Corporation of Delaware. Filed Apr. 19, 1917. Serial No. 163,099. 4 Claims. (Cl. 246—182.)



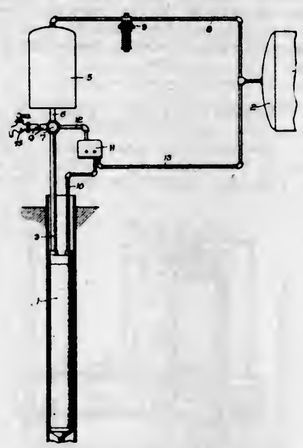
1. In a train controlling mechanism, electromagnetically operated means for controlling the speed of a train, a current supplying means therefor, a plurality of circuits adapted to be made for controlling the supply of current to said electromagnetic means, a set of make and break connections controlled by the speed of the train, another set controlled by the location of the train in the line, one of said circuits adapted to be passed through one of said speed controlled connections, another through said train location controlled connection and another adapted to be made through one of said speed controlled connections, one of said track controlled connections and a contact of another of said track controlled connections whereby current is supplied to the electromagnetic means independent of the speed of the train when the circuit through the track controlled connections is closed, and the supply current is broken when one of said track controlled connections is open and the train is moving above a predetermined speed or when the other of said track controlled connections is open and the train is moving above a different predetermined rate of speed.

1,385,061. PUMP AND PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 27, 1917. Serial No. 183,094. 108 Claims. (Cl. 103—8.)



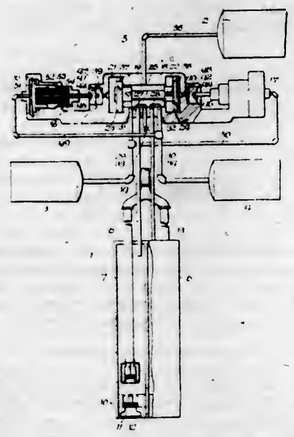
1. In a system of the class described, a pump comprising a single cylinder having liquid inlet and outlet check

valves, a discharge pipe and an air pipe, a source of compressed air communicating with the air pipe, a master valve means above the level of the liquid controlled by the discharge of liquid from the cylinder, and a relay in the



well adjacent to the pump cylinder controlling the inlet of air from said source through the pipe to the pump cylinder, and means governed by the master valve for operating the relay valve.

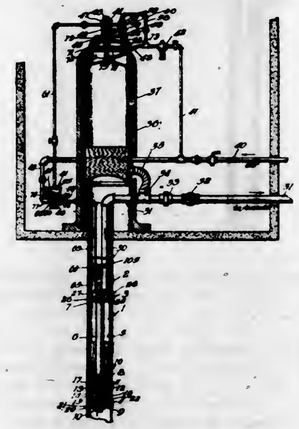
1,385,062. PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 27, 1917, Serial No. 183,095. Renewed Apr. 7, 1921. Serial No. 459,336. 41 Claims. (Cl. 103—8.)



15. The method of controlling a pumping system of the class described which consists in accumulating a supply of motive fluid at a predetermined pressure, sufficient to make only one stroke of the pump, accumulating a supply of liquid to be pumped, causing the accumulated supply of motive fluid to engage the accumulated supply of liquid, then moving the liquid by the expansion of the motive fluid, and then disengaging the motive fluid from the liquid by the drop of pressure in the motive fluid caused by said expansion.

1,385,063. PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 27, 1917. Serial No. 183,096. 24 Claims. (Cl. 103—8.)

1. In combination a pump cylinder, a control valve for the pump cylinder for admitting and exhausting motive fluid, a discharge pipe, means communicating with the discharge pipe for exerting a yielding pressure invariably higher than atmosphere upon the fluid in the same, a source of motive fluid and a pressure controlled valve subject to the change of pressure caused in the discharge main by the individual pump strokes governing the shifting of the control valve for each stroke of the pump.



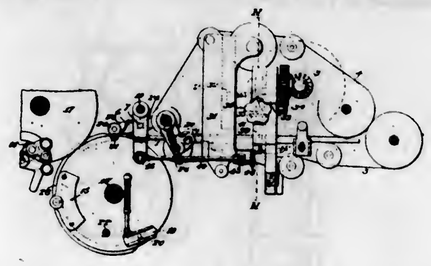
1,385,064. PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 27, 1917, Serial No. 183,098. Renewed Apr. 15, 1921. Serial No. 461,678. 26 Claims. (Cl, 103—8.)

26. In combination, a pumping chamber, a source of motive fluid at a predetermined pressure, a main valve, a

motor and a pressure controlled member subject to the pressure in the pumping chamber, and means for applying a predetermined quantity of motive fluid at said predetermined pressure to the pumping chamber and permitting it to expand as the water is driven out of the pumping chamber, said pressure controlled member operating when the pressure in the pumping chamber has dropped to a predetermined minimum to cause the motor to shift the main valve to connect the pumping chamber to exhaust.

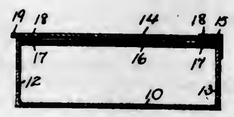
1,385,065. PNEUMATIC PUMP. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 11, 1919. Serial No. 330,038. Renewed Apr. 9, 1921. Serial No. 459,977. 28 Claims. (Cl. 103—8.)

1. In a faucet controlled pneumatic displacement pumping system having the usual single cylinder pump barrel submerged in the liquid and an air spring for steadying the flow of liquid discharged and having an air valve governing the admission and exhaust to and from the pump barrel, the combination of means for weighing the water contained in the air spring and means operated when the weight of water in the air spring drops below a predetermined minimum value for shifting the air valve to admit compressed air to the pump cylinder.



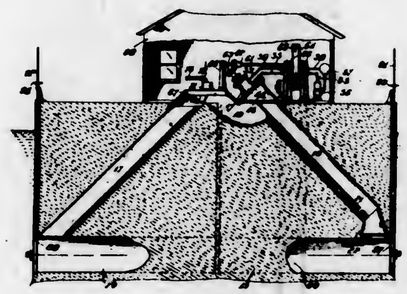
1,385,066. THREAD-GUIDE. DAVID AYRES, Paterson, N. J. Filed Jan. 4, 1921. Serial No. 434,917. 7 Claims. (Cl. 242—157.)

1. In a thread guiding device, the combination of an attenuated support having an enlarged holder on one end thereof formed with a seat, a guide having a base bearing on said seat, and a spring coupling removably holding the guide to the holder in rigid relation thereto.



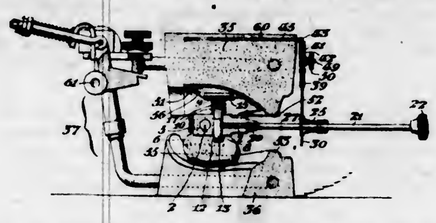
1,385,067. SHEET-HANDLING MACHINE. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 4, 1918, Serial No. 210,342. Divided and this application filed Apr. 23, 1918. Serial No. 230,272. 6 Claims. (Cl. 1—7.)

6. A stitcher, its movable support, a sheet stop, its movable support, a stationary table and a common means connected to both the stitcher and sheet stop supports



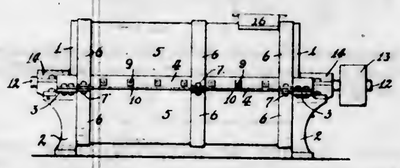
for moving them and maintaining their predetermined distance from each other while the parts are operating.

1,385,068. BOX. LOUIS BINDER, Newark, N. J. Filed Jan. 23, 1920. Serial No. 353,524. 4 Claims. (Cl. 229—45.)



1. A box comprising a body portion with side walls, a lid, and a flat sheet on the inner side of the lid and secured thereto and forming a part thereof so that all parts of the flat portion of the sheet are movable toward the lid and can therefore press evenly on the contents of the box.

1,385,069. PUMPING APPARATUS. MATTHEW T. CHAPMAN, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Filed Oct. 30, 1918. Serial No. 260,295. 16 Claims. (Cl. 103—43.)

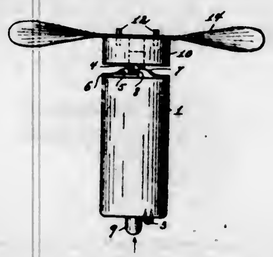


1. A pumping apparatus of the class described, comprising in combination reversely-inclined suction and discharge pipes and a communicating passage connecting the upper ends of such pipes, said passage being of greater diameter horizontally than it is vertically, and having an upper wall with a substantially horizontal surface, rotary propeller means in the lower portion of said suction pipe, means for driving said propeller means, and supports for said driving means secured in part upon said upper wall of the said passage.

1,385,070. BITE-TAKING DEVICE. GORDON S. DAVIDSON, Sydney, New South Wales, Australia. Filed Dec. 16, 1919. Serial No. 345,255. 18 Claims. (Cl. 32—1.)

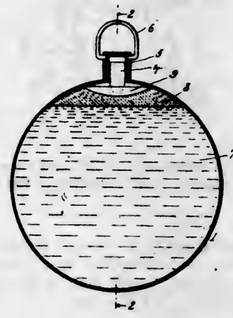
1. A bite-taking device comprising a frame having separate means adjustable to engage the roof and lower gums of the human mouth.

1,385,071. GRAIN-BEARDER. LLOYD N. DIBERT, San Francisco, Calif. Filed Feb. 12, 1921. Serial No. 444,526. 4 Claims. (Cl. 83—30.)



1. A grain-bearder comprising spaced heads having rabbet-shoulders; tie-plates rigidly connecting said heads; a sectional peripheral jacket extending between and resting on the rabbet-shoulders of the heads; straps embracing the jacket and detachably connected with the tie-plates; spikes carried by and extending from the tie-plates into the space inclosed by the jacket; a rotatable shaft mounted in the heads and passing through said space in the axis thereof; and spikes carried by said shaft.

1,385,072. METAL ALLOY AND PROCESS OF PRODUCING THE SAME. JAMES B. GRENAGLE, Catonsville, Md., assignor to The Rare Metals Reduction Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 24, 1919. Serial No. 347,064. 2 Claims. (Cl. 75—1.)



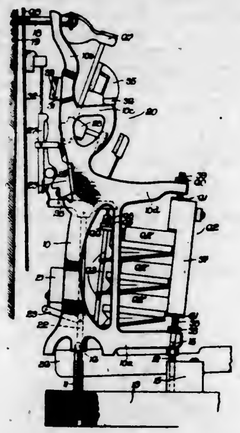
1. An alloy containing 60 to 90% molybdenum and 40 to 10% tantalum.

1,385,073. FLYING TOY. OTTO H. ELLER, New York, N. Y. Filed Nov. 22, 1919. Serial No. 339,806. 2 Claims. (Cl. 244—2.)

1. An apparatus of the kind described, comprising a barrel provided with a longitudinally arranged bore, a spiral spring located within the bore of said barrel, one end of which is secured to one end of said barrel and the other end of which extends above the other end of said barrel, a rod provided with a head at one end, said rod extending longitudinally through the spring and barrel and adapted to turn loosely therein, diametrically oppositely arranged pins secured in the said head, a propeller provided with apertures designed to be engaged by said pins, detachably secured to said head, an apertured disk provided with diametrically oppositely arranged teeth secured to the top of the barrel, a pin passing through the rod and located below the head to be engaged by the said teeth on the apertured disk.

1,385,074. CHEMICAL HEATER. GEORGE E. FERGUSON, New York, N. Y., assignor to Pyrene Manufacturing Company, a Corporation of Delaware. Filed July 10, 1917. Serial No. 179,670. 7 Claims. (Cl. 126—263.)

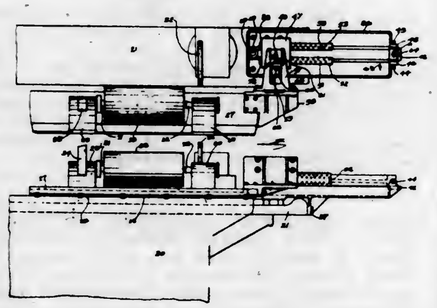
2. In a device of the class described, in combination with a container, a solution of a crystallizable salt and a sealing means in said container, said sealing means having substantially the same melting point as that of the salt solution but of less specific gravity and adapted to be melted upon application of heat thereto but adapted to solidify when cooled and hold said salt solution against agitation and prevent crystallization thereof regardless of the position of the container.



1,385,075. METHOD OF PREVENTING CRYSTALLIZATION OF A MELTED MASS OF CRYSTALS. GEORGE E. FERGUSON, New York, N. Y., assignor to Pyrene Manufacturing Company, a Corporation of Delaware. Original application filed July 10, 1917, Serial No. 179,670. Divided and this application filed Sept. 27, 1917. Serial No. 193,610. 15 Claims. (Cl. 252.)

1. The method of preventing crystallization of a melted mass of crystals which consists in causing said melted mass of crystals and a melted sealing substance of less specific gravity and adapted to solidify at normal temperature to be held while in heated condition in a container, and simultaneously cooling and causing a seal to be applied to said melted mass of crystals holding the same in melted form against relative movement in said container.

1,385,076. ACTION-BRACKET. AXEL G. GULBRANSEN, Chicago, Ill., assignor to Gulbransen-Dickinson Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1917. Serial No. 196,588. 8 Claims. (Cl. 84—28.)



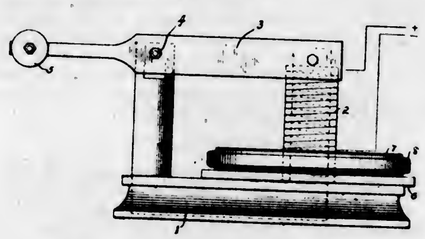
1. In a player piano, the combination of a bracket, said bracket being formed with a vertical body portion and two lateral members extending from said body portion, said body portion adapted to support a piano action, said lateral members adapted to support a pneumatic action positioned therebetween, adjustment means coöperating with

said bracket to adjust the position of the latter independently of the adjustment means of the pneumatic action and

adjustment means coöperating with said pneumatic action to adjust the pneumatic action relative to the piano action.

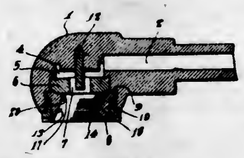
1,385,077. ROLL-GRINDER. SVEND HANSEN, Brooklyn, N. Y., assignor to Birmingham Iron Foundry, Derby, Conn., a Corporation. Filed Mar. 5, 1919. Serial No. 280,821. 7 Claims. (Cl. 51—49.)

1. A roll grinding machine, comprising a sliding carriage carrying a grinding wheel, a centrally mounted swinging table mounted adjacent to the sliding carriage, means for mounting a roll on said swinging table, means for revolving said roll, a crowning bar bracket connected with the sliding carriage, a crowning bar pivoted to the inner end of the crowning bar bracket, and means interposed between the said crowning bar and table to turn the table as the carriage moves.



1,385,078. CAP-SPINNING FRAME. JOSEPH H. JONES, Winthrop, Mass., assignor of one-half to Robert Burgess, Newton Center, Mass. Filed Nov. 10, 1919. Serial No. 336,897. 3 Claims. (Cl. 118—62.)

1. In spinning devices of the revolving cap class, the combination with a revolving spinning element, of a cap mounted upon the blade or barrel of said element, revolved thereby and movable longitudinally thereof, and a wheel for said cap controlling the latter in the traverse movements, said cap and wheel having purely rolling peripheral contact between the tapering periphery of one thereof and

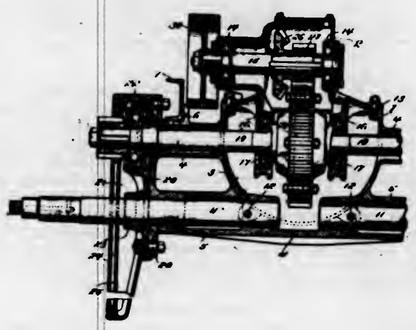


the periphery of the other, one of them being cone-shaped, and with a peripheral portion of the cap overhanging a peripheral portion of the wheel.

1,385,079. METHOD OF REMOVING TIRES FROM RIMS. ROBERT R. JONES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 5, 1917. Serial No. 146,690. 2 Claims. (Cl. 157—6.)

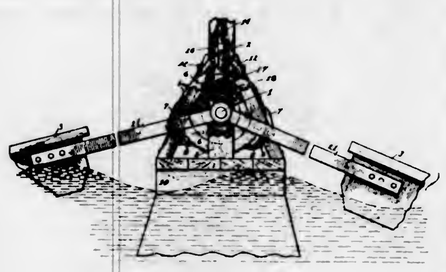
1. The method of removing a rubber tire from a rim to which it has been vulcanized, which consists in passing an electric current through the rim, whereby the rim is heated and the rubber adjacent thereto is melted, and stripping the tire from the rim.

1,385,080. COUPLING. JAMES F. KEY, Sierra Madre, Calif., assignor of one-half to William A. Hayt, Los Angeles, Calif. Filed May 24, 1920. Serial No. 383,931. 9 Claims. (Cl. 284—17.)



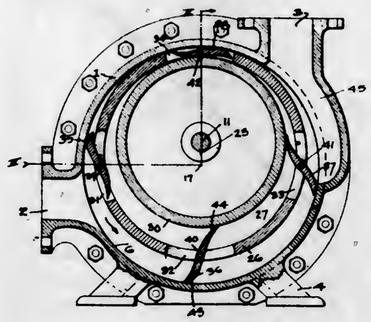
1. In an air hose coupling adapted for connection with a tire valve stem, a throat provided with an abutment and an opposed threaded wall, and an elastic washer for automatically binding the coupling against the stem.

1,385,081. COMPOUND AND METHOD OF PRODUCING SAME. VICTOR LENHER, Madison, Wis. Filed Aug. 4, 1920. Serial No. 401,218. 14 Claims. (Cl. 75—27.)



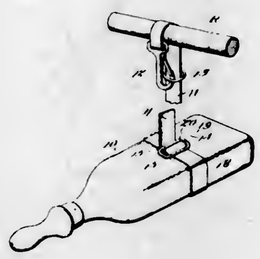
1. The method of producing a solution of a substance which comprises subjecting such substance to the action of selenium oxychlorid alone or compounded with a modifying agent.

1,385,082. REAR-AXLE ASSEMBLY. ALFONSO M. LEONI, Philadelphia, Pa., assignor, by mesne assignments, to Steinmetz Electric Motor Car Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 19, 1919. Serial No. 311,914. 5 Claims. (Cl. 74—99.)



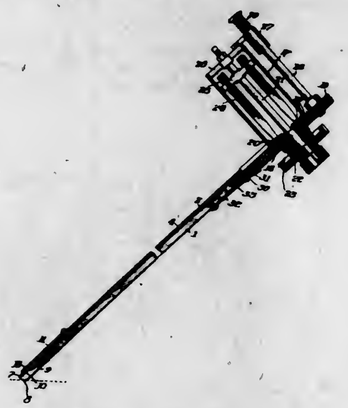
1. A rear axle assembly comprising a two-part housing, one part being formed with lateral sleeve extensions to receive the driving and dead axles, plates secured to such part, bearings for the driving axles arranged in such plates, and rings carried by such plates to receive dust-guard strips for coöperation with the wheels.

1,385,083. WAVE-MOTOR. THOMAS A. MCCULLEY, San Francisco, Calif. Filed May 29, 1920. Serial No. 385,383. 3 Claims. (Cl. 253—11.)



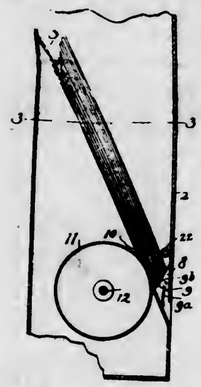
1. A wave motor comprising a power shaft; a pinion secured thereto; gears rotatably mounted adjacent said pinion and adapted to engage said pinion at opposing sides thereof, to drive said power shaft; oppositely acting ratchets rotatably mounted adjacent said gears and secured thereto; actuating arms pivotally mounted adjacent said ratchets; buoys engaging said actuating arms and adapted to oscillate said arms by the action of waves; and upwardly and downwardly acting pawls mounted upon said actuating arms and engaging said ratchets to impart a rotative movement to said ratchets when said actuating arms are actuated.

1,385,084. ROTARY ENGINE. JOHN M. MACFARLANE, San Francisco, Calif. Filed Jan. 28, 1920. Serial No. 354,628. 4 Claims. (Cl. 103—44.)



1. A rotary engine comprising a casing, a rotary vane guide in said casing, a rotor eccentric and approximately contacting with said casing and said guide; and vanes pivoted intermediate their ends in said rotor.

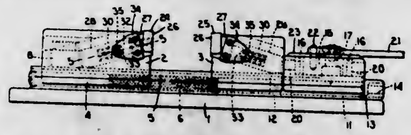
1,385,085. BOTTLE ATTACHMENT. FRANCIS J. MAHONEY, Edgewater, N. J. Filed Jan. 19, 1918. Serial No. 212,703. 1 Claim. (Cl. 248—65.)



A bottle holder comprising a buckle having parallel slots providing a bar therebetween, a strip of elastic material having one end threaded through both of said slots across said bar, means located at the extremity of said end to prevent passage through the slot, the opposite end of the strip being also threaded through each of the slots and across the bar to provide a loop upon one side of the buckle for the reception of a bottle and loop upon the opposite side of said buckle and a ring threaded through said last mentioned loop to facilitate the adjustment of the loop.

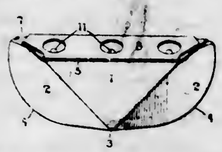
1,385,086. HOLDER FOR RUBBER-HEEL WASHERS. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 18, 1919. Serial No. 271,879. 18 Claims. (Cl. 18—1.)

1. A holder for washers or the like, comprising a body, a guide for the passage of the washers, an exit at the foot of said body and a flexible element located over and normally closing said exit.



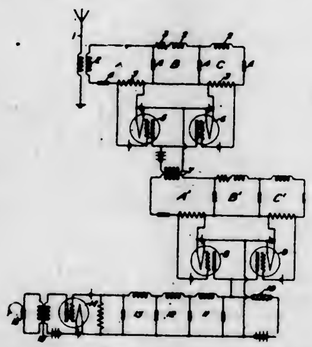
1,385,087. VENDING-MACHINE. GEORGE H. MATCHETT, Lakewood, Ohio. Filed Jan. 30, 1914. Serial No. 815,565. 7 Claims. (Cl. 211—8.)

7. In a periodical vending machine the combination with a magazine adapted to hold periodicals, said magazine having an opening through which a periodical may be extruded, means which when operated extrudes the periodical from the magazine, a pivoted member having a foot and an arm, the arm being engaged by a periodical as it is being extruded thereby moving the foot into engagement with the forward end of the periodical next to the periodical being extruded thereby preventing more than one periodical being extruded at an operation.



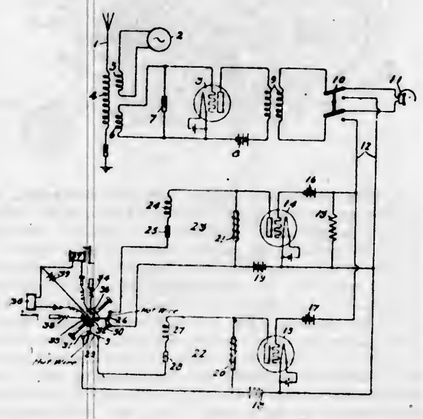
1,385,088. VISE. ALFRED S. MELLOR, Cambridge, Mass. Filed Apr. 18, 1918. Serial No. 229,240. Renewed May 27, 1921. Serial No. 473,047. 7 Claims. (Cl. 81—27.)

1. In a vise, the combination with two jaws, of means to move them toward and from each other, each jaw having a recess in its operative face, the top and bottom walls of which recess have a downwardly-inclined direction, a work-clamping member fitting the recess in each jaw and constructed to move backwardly and downwardly when pressure is applied thereto in a direction determined by the top and bottom walls of the recess, a guiding element rigid with each work-clamping member and extending rearwardly and downwardly therefrom through the corresponding jaw, each jaw having a guiding surface which coöperates with the corresponding guiding element throughout its length to hold the jaws against locking movement as they recede, and a spring acting on each work-clamping member and yieldingly resisting the receding movement thereof.



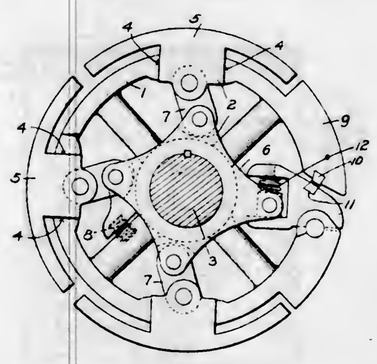
2. In a vise, the combination with two jaws, each having a recess in its operative face, of means to give said jaws a relative movement toward and from each other, a work-clamping member sustained in the recess of each jaw, each work-clamping member having a stem extending therefrom in a rearward and downward direction entirely through the jaw, each jaw having a guiding surface which engages the stem throughout its length, each work-clamping member being capable of moving downwardly and rearwardly in a direction determined by said stem, and a spring acting on each work-clamping member tending to yieldingly resist the receding movement thereof.

1,385,089. GARDEN-TOOL. ARTHUR MILLER, Brooklyn, N. Y. Filed June 13, 1919. Serial No. 303,963. 8 Claims. (Cl. 55—39.)



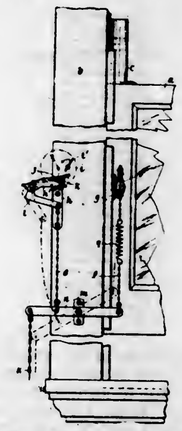
1. A garden tool comprising, a triangular blade having wings depending therefrom.

1,385,090. RADIO-RECEIVING SYSTEM. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 19, 1916. Serial No. 79,441. 30 Claims. (Cl. 250—20.)



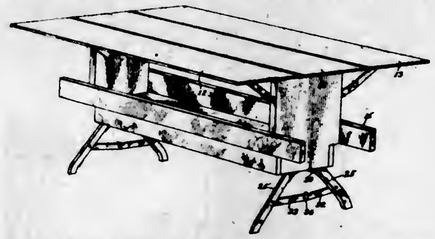
1. A radio receiving system comprising an antenna, selective means for progressively attenuating impressed alternating currents, said means including a series of circuit sections, and a detecting device differentially connected to two such sections.

1,385,091. SIGNALING. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1916. Serial No. 122,070. 30 Claims. (Cl. 250—8.)



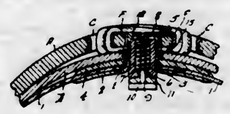
1. The method of eliminating interference which consists in translating the interfering energy into a plurality of integrated effects the time of integration being longer than the period of any audio-frequency signal oscillation to be received, modifying one of said integrated effects in accordance with the signals to be received, and in controlling a signaling device in accordance with said integrated effects.

1,385,092. REEL STRUCTURE. FRANK T. NEALE, Carnegie, Pa. Filed Dec. 3, 1920. Serial No. 427,982. 8 Claims. (Cl. 242—110.)



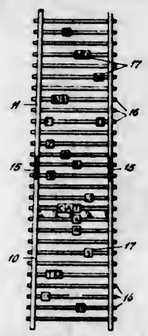
4. In a reel structure a cylindrical body provided with radial slots, a winding surface including drum segments with radial necks extensible in said slots, a member rotatable relatively to said cylindrical body and on a common axis with said cylindrical body and operative toggle connection between said rotatable member and said drum segments, substantially as described.

1,385,093. AUTOMATIC CLOSURE-CONTROLLING APPARATUS. GEORGE B. O'NEIL, Paterson, N. J. Filed Feb. 17, 1921. Serial No. 445,742. 7 Claims. (Cl. 161—1.)



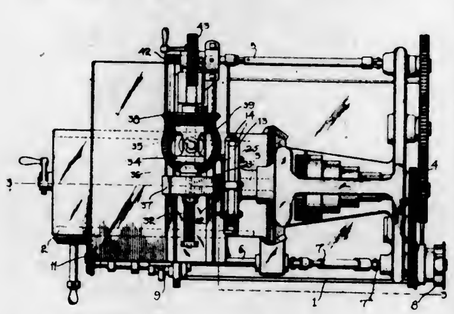
1. In combination, with supporting means, a controlling member having movement therein back and forth and its movement in one direction limited thereby, elastic trippable means normally holding said member at said limit, and time means for tripping said trippable means.

1,385,094. TABLE STRUCTURE. GEORGE H. PORTER, San Francisco, Calif. Filed June 10, 1920. Serial No. 387,878. 5 Claims. (Cl. 190—12.)



1. In a device of the character described, a table having a fixed central leaf, vertical panels rigidly secured to the opposite ends thereof, folding legs mounted beneath the vertical panels, a hinged leaf on each side of the fixed leaf and adapted to be folded down against the vertical panels and a bench, which, when inverted may be disposed with its legs extending alongside the vertical panels and between the overhanging ends of the hinged leaves.

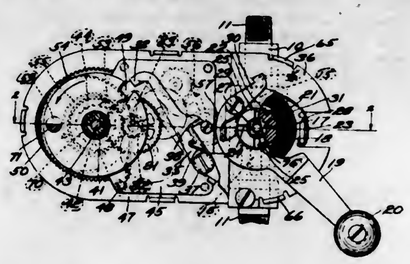
1,385,095. INFLATABLE RUBBER ARTICLE. FRED THOMAS ROBERTS, Cleveland, Ohio, assignor to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Original application filed Aug. 16, 1917, Serial No. 186,477. Divided and this application filed Apr. 3, 1919. Serial No. 287,288. 6 Claims. (Cl. 46—4.)



1. The combination of an air container having a rubber wall with an opening through it, two rubber patches secured respectively to the interior and exterior of said wall about said opening, one of said patches having a tubular flange, a valve body occupying said flange, and an elastic winding surrounding the flange and pressing it against the valve body.

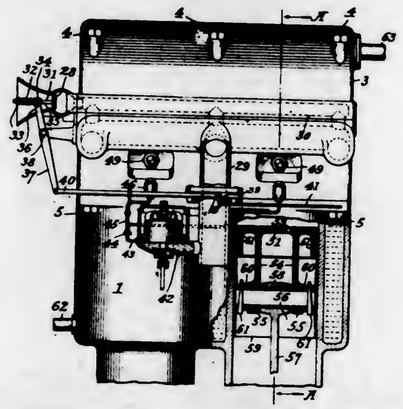
1,385,096. EDUCATIONAL DEVICE. FRANCES AYERS RODDY, New York, N. Y. Filed Oct. 21, 1920. Serial No. 418,439. 3 Claims. (Cl. 35—9.)

1. An educational device in the form of a toy for small children comprising two sections foldably connected and adapted to be adjusted to an extended position to form continuations of each other, a plurality of rungs removably mounted upon said sections and located at spaced intervals lengthwise thereof, apertured members having designations produced thereon and adapted to be strung upon said plurality of rungs, said apertured members being adjustable on said plurality of rungs to group said designations in predetermined combinations and means for supporting the extended sections in an upright position.



1,385,097. GEAR-MAKING MACHINE. HENRY J. SCHMICK, Williamsport, Pa., assignor to Schmick Screw and Gear Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 10, 1918. Serial No. 266,139. 21 Claims. (Cl. 90—3.)

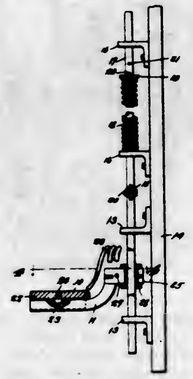
1. The method of generating helical mechanical elements consisting in moving successively a plurality of cutting tools in a straight line entirely across the full width of the blank operated upon and continually rotating the blank, the movement of the blank during the cutting period equaling half the circumferential distance between the centers of the teeth.



7. In a gear generating machine, for generating helical working elements, the combination of a rotary cutting head, a plurality of spaced tool holders rotatable with the head and movable for a predetermined distance in their travel in a straight line, a blank carrier, and means timed to move a blank on the carrier one half the distance between two adjacent elements, the space between the tools being such as to permit of the blank rotating the remaining distance between two elements before the succeeding cutter tool commences to perform its cutting operation on the blank.

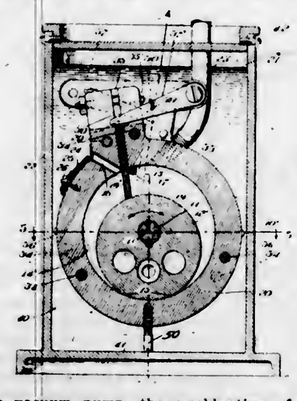
1,385,098. SELECTIVELY-OPERABLE TIMING MECHANISM. RAYMOND D. SMITH, Arlington, Mass., assignor to Shawmut Machine Works, Inc., Boston, Mass., a Corporation of Maine. Filed Apr. 16, 1917, Serial No. 162,337. Renewed Aug. 12, 1919. Serial No. 317,100. 7 Claims. (Cl. 161—9.)

3. Time-controlled, tension-actuated mechanism, embodying an element to be controlled, arranged for limited rotary reciprocative movement; manually controlled means to establish the element under rotative tension; a projection extending from said element; a yielding detent free of connection to said element and to said projection, positioned to be engaged by the latter and adapted thereby to be displaced from the path of movement thereof, when said element is moving toward one extreme position thereof; and timing mechanism for said element, including a manually rotatable cam for governing said detent, power means adapted to impel said cam to an extreme and detent releasing position thereof and means positively to stop said cam at said position, the said cam being formed and coöperatively arranged to prevent yielding of said detent only when rotatively displaced from its releasing position; together with a time-indicating dial and a plurality of inter-geared pointer-hands arranged coöperatively therewith and with said cam for indicating the degree of rotary displacement of said cam from its said position, one of said hands being carried in fixed relation to said cam and another of said hands being adapted for manually operating said cam and arranged for higher rotative speed than the latter.



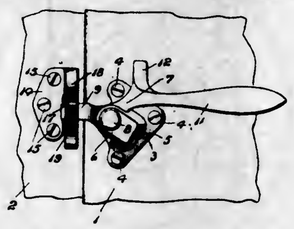
1,385,099. INTERNAL-COMBUSTION ENGINE. HARRY P. STEVENS, New York, N. Y. Filed July 8, 1919. Serial No. 309,327. 8 Claims. (Cl. 123—59.)

6. An internal combustion engine made in a plurality of detachable substantially parallel transverse sections



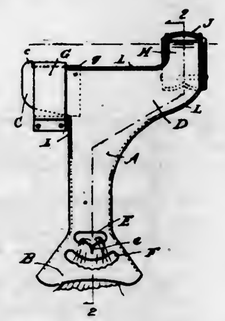
at right angles to the cylinders, one section comprising the cylinder head and complete inlet and exhaust ports and having a manifold thereon, and one section comprising a valve cover and having a manifold thereon, said sections having passages connecting said manifolds adjacent to said inlet ports.

1,385,100. CONTACT-SHOE. WELLINGTON B. SULLIVAN, Baltimore, Md. Filed Oct. 25, 1919. Serial No. 333,391. 10 Claims. (Cl. 191—49.)



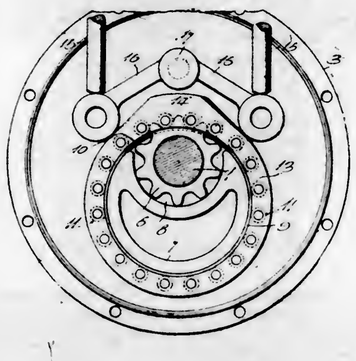
7. A current collector comprising a contact shoe adapted to run on a current conductor, and means for supporting the shoe to normally permit the same to tilt laterally and in the direction of the length of the current conductor.

1,385,101. VACUUM-PUMP. JOHN TWARDOWSKY, Chicago, Ill., assignor to Central Scientific Company, a Corporation of Illinois. Filed Sept. 12, 1919. Serial No. 323,274. 5 Claims. (Cl. 230—30.)



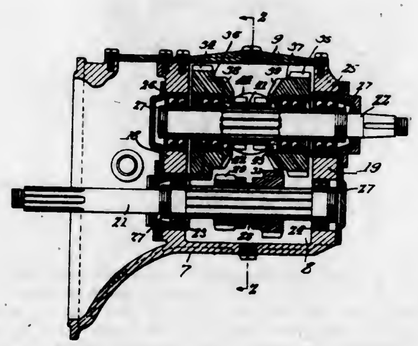
1. In a vacuum pump, the combination of a pair of cylinders arranged end to end and having an intervening wall, a shaft extending through them concentrically, rotors eccentrically mounted in the respective cylinders each having a relatively broad zone of contact with the interior of its cylinder, a single relatively thin blade slidable through the wall of each cylinder and contacting with the rotor said blades being spaced at different circumferential positions, an inlet to one cylinder on one side of its appropriate blade, an outlet from the other cylinder on the opposite side of its blade, there being a communication passage forming the outlet for the first said cylinder and the inlet for the second said cylinder opening through the intervening wall in the circumferential space between the blades and close to the respective appropriate sides of said respective blades, the inlet and outlet of each cylinder being within a zone no broader than the contact zone of the respective rotor.

1,385,102. LATCH. ALEXANDER F. WINTERS and BASIL R. CRAMPTON, Grand Rapids, Mich. Filed Dec. 7, 1920. Serial No. 428,891. 7 Claims. (Cl. 292—241.)



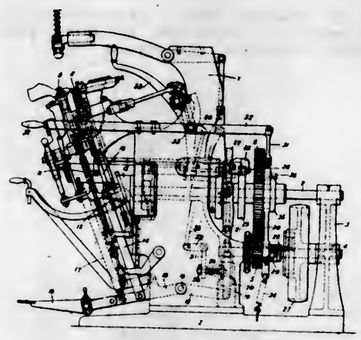
1. In combination, a door and a casing therefor, a keeper attached to the casing comprising a base, an outstanding post and a head at the outer portion of the post, said head depending below the post and formed with upper and lower curved outer sides coming substantially to a point and with an inner upwardly and inwardly inclined side, a member attached to the door comprising a base, an integral outstanding post projecting from the base and a laterally extending arm at the upper end of the post paralleling the base, and a latch lever pivotally mounted between its ends between the said arm and base of said member, said lever having one arm formed with an under cam side extending from the pivot and adapted to be engaged under the depending portion of the keeper, a handle portion extending in the opposite direction from the pivot and another arm projecting from the handle portion a distance from the pivot and lying substantially at right angles to the first arm of the lever and likewise being formed with an inner cam side, substantially as and for the purposes described.

1,385,103. TROUSERS-SUPPORTER. LEONARD WOODS, St. Louis, Mo. Filed Aug. 11, 1919. Serial No. 316,760. 6 Claims. (Cl. 24—81.)



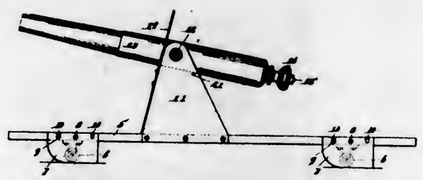
2. A device of the character described comprising a plate body having upper arms one of which is adapted to engage the trousers band and the other arm to engage means permanently attached to the trousers, and having a downwardly extending base adapted to engage the shirt of the wearer,—said base having two slots one above the other and one larger than the other, adapted to receive a folded tongue of the shirt passed below said base to the outside, then upward and through said slots in reverse directions to be held by frictional engagement with the edges of said slots,—a converging notch in the edge of one slot being adapted to pinch the tip end of the folded tongue.

1,385,104. VALVE-GEAR FOR MOTORS. ANGEL APANADOR, Lincoln, Nebr. Filed June 12, 1919. Serial No. 303,581. 3 Claims. (Cl. 123—96.)



1. In a valve gear for internal combustion engines, the combination with a crank case having a removable end, a crank shaft passing across said crank case and through said end, and valve-operating rods extending into said crank case; of a fixed annular track within the crank case and carried by the inner side of said removable case end, said track surrounding said shaft eccentrically, an internal gear ring within said crank case and surrounding said track in running contact with the latter, a gear on said crank shaft within said crank case and meshing with said internal gear ring, and cams on said gear ring for actuating said valve-operating rods.

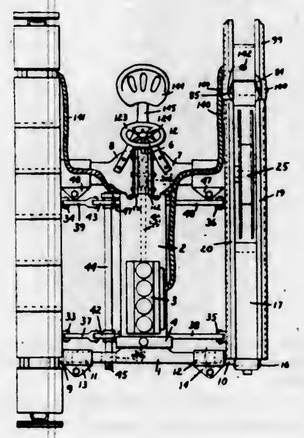
1,385,105. CHANGE-SPEED GEARING. AXEL HJ. ASPROOTH, Rockford, Ill., and ALFONSO M. LEONI, Dayton, Ohio, assignors, by mesne assignments, to Steinmetz Electric Motor Car Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 2, 1919. Serial No. 308,075. 12 Claims. (Cl. 74—58.)



6. In a power transmission gearing, a driven shaft, independent gear elements thereon, a power shaft, a driving connection between said power shaft and both of said gear elements, a driving shaft, and means on said driving shaft to selectively engage either of said gear elements to thereby vary the speed of the power shaft.

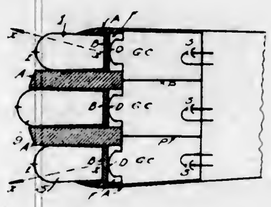
1,385,106. PULLING-OVER MACHINE. CHARLES MARTIN BAGSHAW, Leicester, England, assignor to The Gimson Shoe Machinery Co. Limited, Leicester, England, a Corporation of Great Britain. Filed Dec. 20, 1919. Serial No. 346,341. 20 Claims. (Cl. 12—4.)

1. A pulling-over machine having upper gripping devices, a treadle to move said devices for stretching the upper, and power-driven means to move said devices for stretching the upper, said machine being constructed and arranged so that the movement of the upper gripping devices for stretching the upper may be effected partly by the treadle and partly by the power-driven means, or wholly by the treadle, or wholly by the power-driven means, for the purpose described.



1,385,107. TOY PUSH-VEHICLE. FRANK R. BAIER, Chicago, Ill. Filed Jan. 28, 1918. Serial No. 214,168. 1 Claim. (Cl. 280—8.)

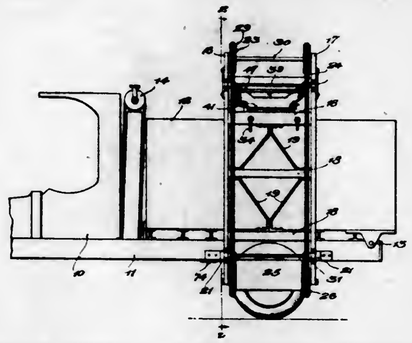
The combination with a device of the class described, of a base member upon which the user may ride; wheels rotatively mounted on said base member for engagement with the ground; and comparatively short runners adjustably mounted, pivotally, intermediate their ends at intervals on opposite sides of said base member, adapted, in one position, to contact with the ground, and adapted for adjustment to another position out of contact with the ground, said runners being adapted when in contact with the ground, to raise the periphery of said wheels free from any surface contact, each of said runners having a plurality of slots in the edge opposite the ground engaging edge; and means in said base member engaging in said slots to retain said runners in adjustable position, substantially as described.



1,385,108. TRACTOR. JOHN BARLETTA, San Francisco, Calif. Filed July 8, 1919. Serial No. 309,505. 8 Claims. (Cl. 180—9.1.)

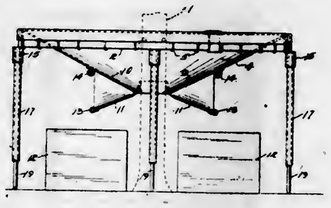
1. An endless tread tractor comprising a main frame, front and rear axles carried by said frame, laterally adjustable side frames carried by the axles, an endless tread carried by each of the laterally adjustable frames,

and means to rotate the rear axle to drive the endless treads.



1,385,109. TORPEDO FOR TRANSPORTING AND FIRING EXPLOSIVES. WILLIAM RUSHTON BOWKER, Coronado, Calif. Filed Oct. 21, 1920. Serial No. 418,384. 4 Claims. (Cl. 114—20.)

1. The combination in a multiple torpedo, of a plurality of explosive receptacles containing an explosive agent, the said explosive receptacles being each provided with a detonating device; a plurality of gas explosive chambers provided with spark gaps and a puncture sealing cap, the said gas explosive chambers being filled with an energy propelling agent, an electrical induction sparking coil, an electrical battery, a multiple point timing contactor and electrical circuit connecting wires, all substantially as set forth.

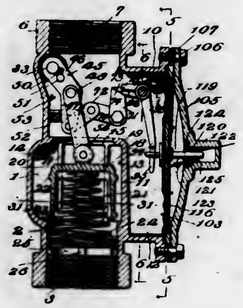


1,385,110. LOADING DEVICE. VERNON H. BROWN, New York, N. Y. Filed Nov. 30, 1920. Serial No. 427,448. 11 Claims. (Cl. 214—75.)

1. The combination with a vehicle having a material receiving bed, of a conveyer frame secured to the vehicle chassis and adapted to be moved toward and away from the receiving bed, a conveyer on said frame, means for operating said conveyer, and releasable means for holding said conveyer and its frame in position adjacent the

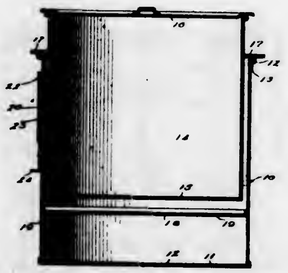
receiving bed whereby the conveyer may deposit material thereupon.

1,385,111. FRUIT-GATHERER. VICTOR BYMAN, Amity, Oreg. Filed June 19, 1918. Serial No. 240,763. 1 Claim. (Cl. 56—329.)



In a fruit gatherer, a circular frame formed of a single piece of material having its meeting edges strapped together, legs adjustably supporting said frame, a basket formed of flexible material having its outer edge secured to said frame and overlapping the same, the bottom of said basket sloping downwardly from its outer edge to its central portion, said basket being formed with a normally closed slit and with oppositely disposed central openings, oppositely disposed flexible chutes secured to said basket below the central openings therein and upon opposite sides of the center of the basket, said chutes opening in opposite directions, each chute in open position sloping downwardly in a direction opposite to the slope of the bottom side of the basket to which it is secured, each of said chutes in raised position being adapted to close one of said central openings, and means for retaining said chutes individually in raised position.

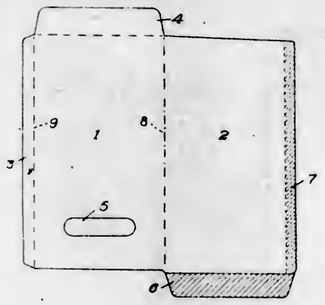
1,385,112. AUTOMATIC CUT-OFF VALVE. SELBY C. CARR, Oklahoma, Okla. Filed May 7, 1918. Serial No. 233,104. 64 Claims. (Cl. 137—92.)



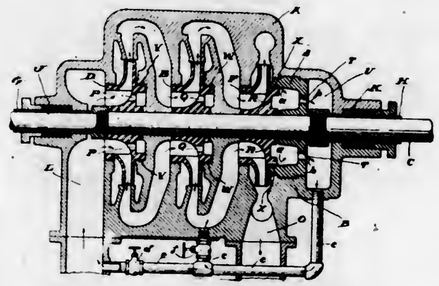
9. In an automatic cut-off valve of the class described, a casing having an inlet and an outlet, a valve in the casing, means tending to move the valve to closed position, means active to resist closing movement of the valve in the presence of fluid in the casing under degrees of pressure between a predetermined minimum degree and a predetermined maximum degree and arranged to be rendered inactive upon decrease in pressure below the minimum degree and upon increase of pressure above the maximum degree, local manually operable means for rendering the

resisting means inactive, means manually operable from a distance for rendering the resisting means inactive, and

thermostatic means arranged in the presence of abnormally high degrees of temperature to render the said resisting means inactive.



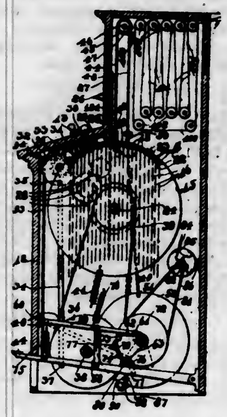
1,385,113. HOT-AIR CANDY-COOKER. ELIZABETH AGNES CASEY, Pittsburgh, Pa. Filed Mar. 1, 1921. Serial No. 448,943. 2 Claims. (Cl. 53—1.)



1. A candy cooker comprising an outer casing having an apertured base and an apertured bottom plate spaced above the base and both extending entirely across the casing with their apertures disalined, and a receptacle depending into the casing, having a removable cover and means engaging the casing and supporting the base of the receptacle in spaced relation above the bottom plate of the casing, said casing being of greater diameter than the receptacle whereby a space is formed therein around the receptacle and also having manually controlled heat outlet means located therein above the base of the receptacle as described.

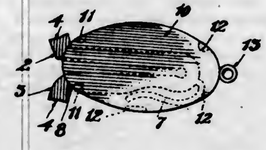
1,385,114. DOUBLE ENVELOP. CHARLES E. CATHER, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Dec. 16, 1919. Serial No. 345,393. 2 Claims. (Cl. 229—72.)

1. A two compartment envelop formed from a single blank comprising a body portion, provided with an ungummed closing flap at one of its ends, a side flap of the same width and length as the body portion, provided with a gummed closing flap at its end opposite the closing flap of the body portion, a narrow side flap on the opposite side of the body portion, said side flaps being folded on said body portion and united at their edges to form a tubular inclosure open at its ends, folding said tubular compartment transversely near one of its ends to bring the gummed surface of said gummed closing flap outermost, thereby forming two compartments of unequal size, with the larger compartment provided with an ungummed closing flap and the smaller compartment having a gummed closing flap, and with said compartments united by adhesive material.



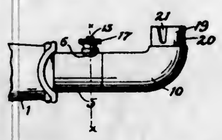
1,385,115. CENTRIFUGAL PUMP. JOSEPH D. CONE, Montclair, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,335. 2 Claims. (Cl. 253—188.)

1. In a centrifugal pump, the combination of a casing having inlet and discharge sides and at least one single suction impeller, a stationary portion of the casing structure located within the discharge side being provided with permanent continuously open relief apertures affording continuous communication between the interior of the pump and a relief chamber within the end of the casing, a connection between said relief chamber and a point in the pump at a lower pressure, and means for controlling the flow of fluid through said connection, whereby the thrust tending to force the impeller toward the inlet side of the pump is relieved.



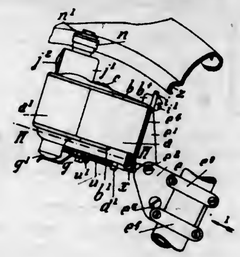
1,385,116. INFORMATION STORING AND DISPLAYING DEVICE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Mar. 16, 1921. Serial No. 452,698. 13 Claims. (Cl. 40—65.)

1. In a device of the class described, a series of cards, a pair of circular card carrying members having pocket like notches in their outer edges to retain the cards at a lower than horizontal position of the notches, said cards having means to engage in the notches of the card carrying members, a foot lever, a rotary hand lever having means operative to bring any of the cards into selective position, means operative by the foot lever to lift the selected card from the circular card carrying members into



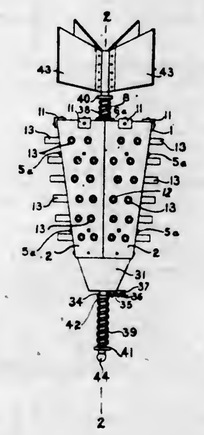
view position, and means for retarding the action of said foot lever and restoring the same to its starting position.

1,385,117. SAFETY-CLASP. JULIUS DINHOFER, New York, N. Y. Filed Mar. 2, 1921. Serial No. 449,118. 5 Claims. (Cl. 24—230.)



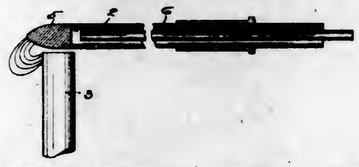
1. A device of the class described comprising a casing, a locking member slidable within the same, said locking member having a pair of spring arms and a spring tongue extending for a distance co-extensive with one of said arms, and a member in said casing around which said spring tongue engages.

1,385,118. SOUND-BOX MOUNTING FOR TALKING-MACHINES. JAMES C. DRAKE, Rochester, Minn., assignor to Sears, Roebuck and Company, Chicago, Ill., a Corporation of New York. Original application filed Apr. 17, 1917. Serial No. 162,747. Divided and this application filed Feb. 19, 1920. Serial No. 359,947. 1 Claim. (Cl. 274—24.)



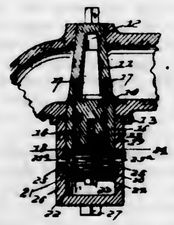
A coupling for sound boxes of talking machines comprising a slotted tubular female member carrying a convex stud on each side of the slot, a male member carrying a radial screw passing into said slot and lying in the axis of said stud, and a traveling nut on said screw with a concave inner face to engage both sides of the stud when the nut is screwed home to wedge them together so as to tighten the grip of the female member on the male member, and at the same time to lock the parts against any endwise movement with respect to the slot.

1,385,119. MAGNETO-ELECTRIC GENERATOR FOR LIGHTING VEHICLES. CHARLES FREDERIC DUFAUX, Geneva, Switzerland. Filed Nov. 13, 1918. Serial No. 262,308. 2 Claims. (Cl. 171—313.)



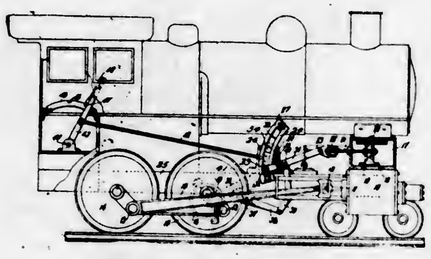
1. A magneto electric generator for lighting vehicles comprising a permanent magnet, a semi-circular non-magnetic plate connecting the poles of the magnet, side plates secured to the said permanent magnet and the said semi-circular plate to form a dust-proof casing, an armature shaft journaled in the said side plates and extending through the journal in one of the side plates, means carried by the armature shaft for contacting with the rim of a vehicle wheel, a rod journaled in the other side plate and upon which the generator is adapted to turn, and a spring associated with the said rod and adapted to exert a tension against the generator to maintain the means on the end of the armature shaft in contact with the rim of the vehicle wheel.

1,385,120. MULTIPLE-GUN-FIRING APPARATUS OR BOMB. GUNNER A. EKMAN, Winchester, Mass. Filed Dec. 12, 1918. Serial No. 266,477. 51 Claims. (Cl. 89—1.)



18. A multiple gun firing apparatus or bomb comprising a structural frame consisting of a top and bottom plate and supporting rods and having sectional side plates attached thereto, a plurality of guns mounted securely in the said side plates, and a slidable rod operating in the said structural frame and being provided with a series of radially extending firing control rings.

1,385,121. ARC-RADIO-OSCILLATION GENERATOR. HAROLD F. ELLIOTT, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed Mar. 23, 1920. Serial No. 368,194. 3 Claims. (Cl. 250—36.)

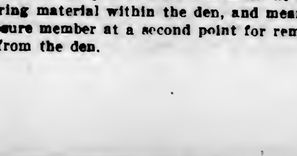


3. In an arc radio generator, a metallic anode having a cylindroconoidal tip and a cathode arranged at right angles to the anode, with the end of the cathode adjacent the tip.

1,385,122. DOUBLE-PRESSURE VENT-VALVE FOR ANGLE-COCKS. ROBERT L. EVANS, Roanoke, Va. Filed Aug. 18, 1920. Serial No. 404,310. 13 Claims. (Cl. 277—64.)

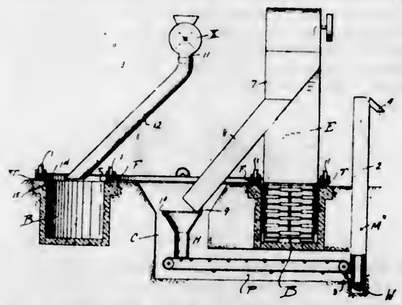
1. The combination with a hollow member adapted to contain fluid under pressure and having a rotatable valve therein in one position permitting passage of fluid and in the other position preventing passage of fluid through the hollow member, of a a vent valve yieldably urged to its seat but opening to permit the escape of fluid from the hollow member on both sides of the rotatable valve when the rotatable valve is turned to a position to prevent the passage of fluid through the hollow member.

1,385,123. LINK GEAR. ROBERT FLOURNOY, Seven Oaks, Tex. Filed Jan. 16, 1917. Serial No. 142,709. 1 Claim. (Cl. 121—170.)



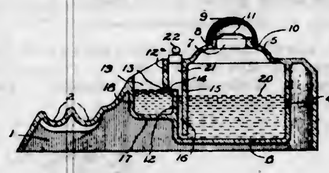
In a locomotive, box links disposed at an angle to each other, each link having a first section and a second section, spacing means intermediate the sections, fastening means removably extending through the sections and spacing means, pivot members extending from the first sections, means to mount said pivot members, the second sections having elongated slots extending on opposite sides of the axis line of the pivots, links, said links being bifurcated, one of said links at the bifurcated portion receiving one of the second sections, the other link at the bifurcated portion receiving the other second section, said links thus being mounted against lateral movement and being capable of movement past said axis line, removable fastening means extending through said slots and the bifurcated portions, power-controlled mechanism operable through movement of the links, cranks extending from the pivot means, means to move the cranks, and manually operable link mechanism connected to the links.

1,385,124. PROCESS OF BASE-EXCHANGING. WOLCOTT C. FOSTER, Rutherford, N. J. Filed Jan. 18, 1917. Serial No. 143,015. 6 Claims. (Cl. 23—13.)



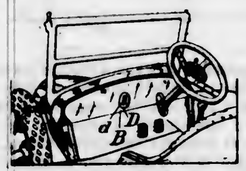
1. The process of regenerating base-exchanging materials used in the softening of water which comprises interrupting the flow of the water to be softened, passing a regenerating material through the base-exchanging materials in a direction opposite to that of the flow of water to be softened, washing the base-exchanging materials and renewing the flow of the regenerating material in the same direction as previously employed.

1,385,125. DOOR-FASTENER. JOHN GEORGE FRASER, Hamilton, Ontario, Canada, assignor of one-half to Garfield I. Evans, Hamilton, Canada. Filed May 1, 1920. Serial No. 378,188. 2 Claims. (Cl. 292—350.)



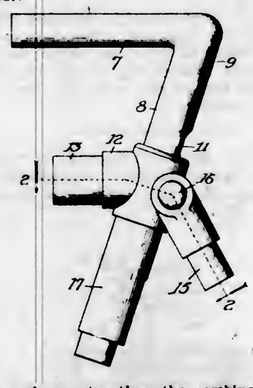
1. In a door fastener the combination with a spindle divided longitudinally into two parts, one of said parts having a plurality of screw-threaded openings in close proximity to each end thereof; of knobs adapted to be mounted upon the ends of said spindle, each knob being chambered to receive the end of the spindle upon which it is to be mounted and having a lateral opening registering with one of the said screw-threaded openings, and means for fastening each knob in position upon the spindle, said means consisting of a screw projecting through said lateral opening and the screw-threaded opening registering therewith, said screw being adapted to separate the parts as it is tightened.

1,385,126. APPARATUS FOR THE MANUFACTURE OF ACID PHOSPHATE. RALPH T. GASTON, Greensboro, N. C. Filed Mar. 27, 1920. Serial No. 369,214. 6 Claims. (Cl. 214—16.)



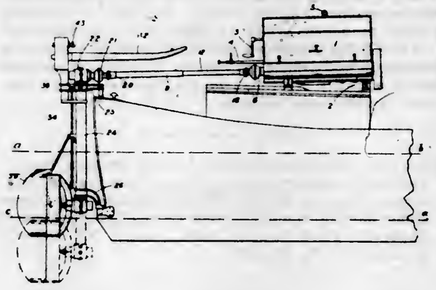
1. An apparatus of the kind described comprising a stationary circular den, said den having its upper face open, a revolving closure member for said open face of the den, means carried by the closure member at one point for delivering material within the den, and means carried by the closure member at a second point for removing the material from the den.

1,385,127. LIQUID-DISPENSER. JOSEPH ANTHONY GOOD, Chicago, Ill. Filed May 16, 1916. Serial No. 97,819. 1 Claim. (Cl. 120—69.)



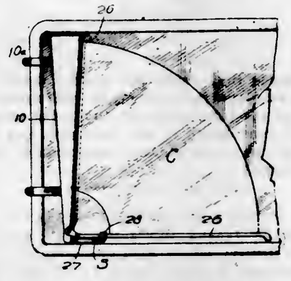
A device of the class described, comprising a reservoir, and a receptacle, a supply duct connecting the reservoir with said receptacle and provided with an inlet port leading to the top of the receptacle and an outlet port leading to the bottom of the receptacle, a single valve mounted in the duct adapted to close both ports or open one at will, and means to cause the contents of the reservoir to flow into the receptacle.

1,385,128. OIL-INDICATOR FOR MOTOR-VEHICLES. FRANK HENRY GUYVER, Stratford-on-Avon, England. Filed July 30, 1920. Serial No. 400,048. 1 Claim. (Cl. 116—117.)



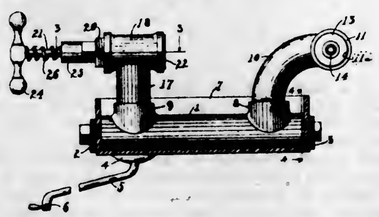
An oil indicator comprising a casing having internal guides, an opaque member closing said casing and having an opening therein, a self-luminous member having linear movement within said guides behind and relatively to said opaque member, and a spring plunger operatively connected with said self-luminous member and in constant subjection to the influence of the oil pressure, substantially as set forth.

1,385,129. CYCLE CONSTRUCTION. ROSCOE S. HEISE, Middletown, Ohio, assignor to The Miami Cycle & Mfg. Co., Middletown, Ohio, a Corporation of Ohio. Filed Dec. 18, 1919. Serial No. 345,897. 7 Claims. (Cl. 208—131.)



3. In a cycle construction, the combination of a split cluster fitting, a seat-post extending into said fitting and having a flat portion, and a pinch bolt on said fitting extending transversely of said post and positioned to engage said flat portion.

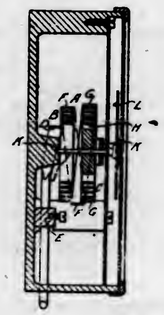
1,385,130. POWER DRIVING MECHANISM FOR CANAL AND OTHER BARGES. ARTHUR EDWARD HOOKE, Birmingham, England. Filed Aug. 14, 1917. Serial No. 186,183. 2 Claims. (Cl. 115—18.)



1. A power-propelling mechanism including a propeller, a vertically extending telescopic driving shaft therefor, a housing for said propeller, an arm having one of its ends secured to such housing, its opposite end terminating in a block formed with an internally screw threaded opening, a screw threaded rod passing through said opening, and means for turning said rod.

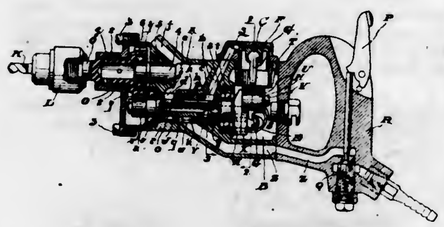
1,385,131. GLARE-SHADE FOR AUTOMOBILES. ELLA HORN, Rifle, Colo., assignor of forty-nine one-hundredths to Albert R. Gwynn, Los Angeles, Calif. Filed Sept. 15, 1920. Serial No. 410,395. 5 Claims. (Cl. 296—97.)

1. In a glare shade for wind shields, supporting means adapted for attachment to a wind shield, a tapered roller, an arcuate curtain wound upon the roller and having one end secured thereto, and means for automatically rotating said roller to wind the curtain thereon.



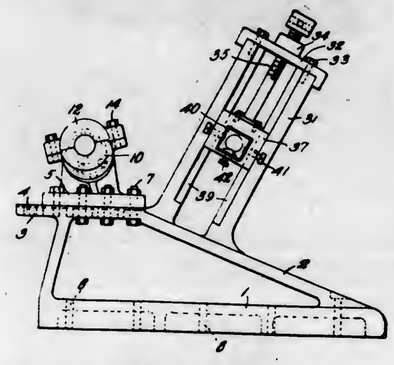
1,385,132. OIL-BURNER. HARRY E. HUNTER, San Jose, Calif. Filed Feb. 20, 1920. Serial No. 360,109. 3 Claims. (Cl. 158—53.)

2. A fuel-oil burner including a secondary vaporizing chamber, a fuel nozzle operatively erected thereon in sub-



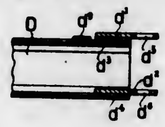
stantially parallel relation thereto and communicating therewith, a primary vaporizing chamber angularly positioned with relation thereto and adjacent the forward end thereof, a member connecting said primary and secondary vaporizing chambers to form open communication therebetween, said member flaring outwardly at both sides to form an oblong orifice at its point of communication with said primary chamber, and an oil feed pipe operatively mounted in said primary vaporizing chamber and provided with a plurality of orifices in that portion thereof positioned within said chamber.

1,385,133. BOURDON TUBE. HAROLD WILLIAM IBBOTT, London, England, assignor to Henry Noel Negretti, Paul Ernest Negretti, Marcus William Zambra, and George Julius Zambra, trading as Negretti and Zambra, London, England. Filed Jan. 12, 1921. Serial No. 436,849. 3 Claims. (Cl. 73—109.)



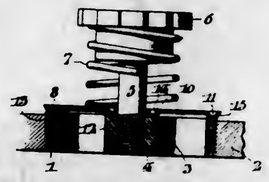
1. A Bourdon tube wound into coaxial double involute coils, an anchorage for the inmost convolution of one involute coil, the outmost convolution being connected to the outmost convolution of the other coil, and a pointer to which the end of the inmost convolution of the second coil is connected.

1,385,134. FLUID-ACTUATED ROTARY TOOL. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 1, 1920. Serial No. 407,504. 5 Claims. (Cl. 121—33.)



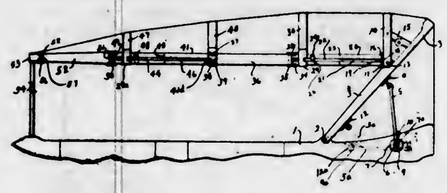
1. In a rotary tool, the combination of a case, a fluid actuated motor having a plurality of radially arranged cylinders in said case, a forwardly extending crank connected to be driven by said motor and having a hollow portion, a valve bushing in the case over said hollow portion of the crank, a motive fluid supply passage in the case leading to an admission port located at a point intermediate the length of the bushing, motive fluid passages leading from the cylinders to supply ports in the bushing located rearwardly of the said admission port, an exhaust port in the bushing, a peripheral passageway in the crank for controlling the distribution of motive fluid to the passages leading to the cylinders, and ports in the crank for permitting the cylinders to exhaust through the hollow portion of the crank.

1,385,135. ADJUSTABLE-CHAIN OIL-BEARING. HARRY A. JONES and EDWARD W. STRUVE, Parsons, Kans. Filed Jan. 3, 1919. Serial No. 269,440. 2 Claims. (Cl. 64—52.)



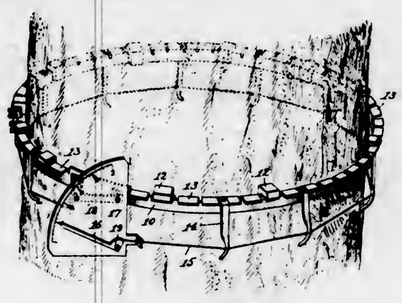
1. The combination of a quadrangular frame having one side parallel to its base and another side at an acute angle thereto, a main bearing mounted on the first mentioned side, an idler frame mounted on the second mentioned side so as to be at right angles thereto, and an idler bearing mounted in the idler frame.

1,385,136. FOUNDATION FOR GUNS. ALFRED KISTNER and KARL STRATOMEYER, Essen, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,389. 4 Claims. (Cl. 89—40.)



2. A foundation for guns which comprises girders disposed in the form of a cross, said girders being box-shaped in cross section, means for detachably uniting said girders, and means disposed between said girders and forming a track surface, for bracing the same and retaining them in their proper positions.

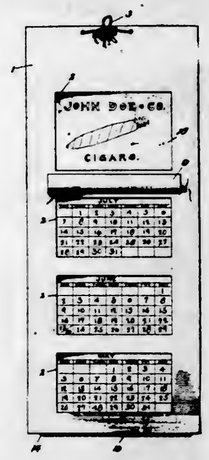
1,385,137. VALVE. GEORGE J. KAUFFMANN, Easton, Pa., assignor of one-half to Maurice F. Richardson, Cynwyd, Pa. Filed Aug. 22, 1919. Serial No. 319,048. 10 Claims. (Cl. 251—145.)



1. The combination of a pump valve seat with inner and outer annular seat surfaces; a guide member; and a thin, light guide-apertured metal disk valve for said seat reinforced and stiffened with outstanding annular contact zone portions for coacting with the aforesaid annular seat surfaces; said valve being loose on said guide member and free to rock with reference thereto and to its seat.

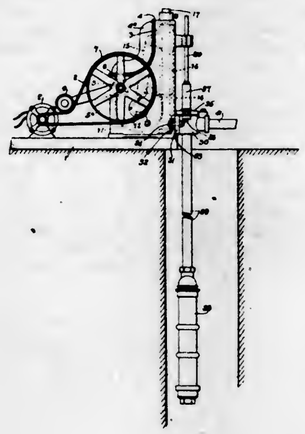
1,385,138. VEHICLE-TOP FRAME. EDWARD LOVER, Buffalo, N. Y., assignor to Lover Top and Converter Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Mar. 14, 1919. Serial No. 282,694. 5 Claims. (Cl. 296—116.)

2. In a vehicle top frame adapted to support a covering over a vehicle, jointed beam members extending lengthwise of said frame and forming the sides thereof, an auxiliary arm pivoted to each of a pair of opposite beam members, midway of the ends thereof and having a swinging end beyond said last mentioned beam member, and a rigid cross beam forming a partial support for said covering having its ends pivotally connecting with said auxiliary arms.



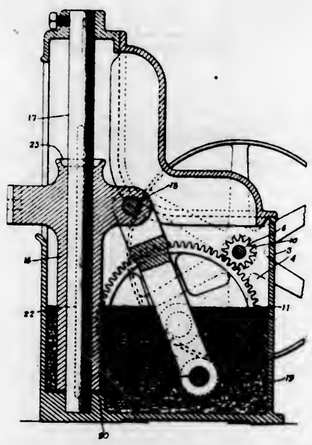
1,385,139. TREE-GROWTH-MEASURING INSTRUMENT. DANIEL TREMBLY MACDOUGAL, Tucson, Ariz. Filed Dec. 13, 1920. Serial No. 430,305. 7 Claims. (Cl. 33—179.)

1. In an instrument of the class set forth, a tree-trunk girdle and means for clamping it adjustably to the trunk, and means carried thereby for indicating the diametrical growth of the trunk, said last-named means functioning independently of the expansion or adjustment of the girdle.



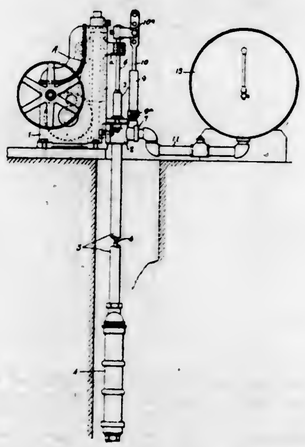
1,385,140. CALENDAR. THOMAS T. MARTIN, Mobile, Ala. Filed Dec. 30, 1920. Serial No. 434,069. 4 Claims. (Cl. 40—116.)

3. In a calendar, the combination of a frame having a plurality of display openings therein and having a slot formed therethrough between two of said openings, means for supporting a rolled portion of a display strip upon one side of the frame over the said slot, a display strip having its inactive portion rolled and housed within said supporting means with its active portion extending through the said slot, and a tension device upon the frame above the uppermost opening, the display strip having announcements upon both faces and being extended



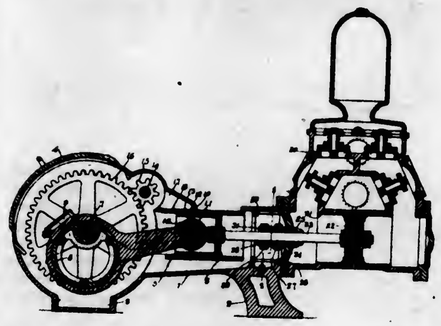
from the slot up to and over said tension device and then from said tension device to the lower end of the frame.

1,385,141. POWER-HEAD. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers and Brother, Ashland, Ohio, a Copartnership consisting of Francis E. Myers and Philip A. Myers. Filed Jan. 16, 1920. Serial No. 351,966. 7 Claims. (Cl. 103—65.)



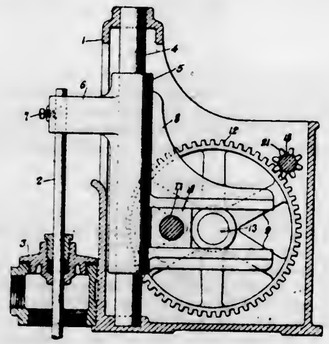
1. In a pumping apparatus, the combination of a power head having oppositely disposed substantially vertical base flanges, and a pump head having substantially vertical flanges corresponding to the flanges of the power head casing, whereby the pump head may be detachably mounted relative to the power head casing in a substantially vertical plane and the pump mechanism alined with the power head actuating mechanism.

1,385,142. POWER-HEAD. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers and Brother, Ashland, Ohio, a Copartnership consisting of Francis E. Myers and Philip A. Myers. Filed Jan. 16, 1920. Serial No. 351,967. 13 Claims. (Cl. 184—27.)



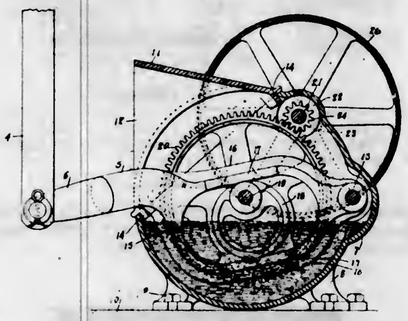
10. In a power head, the combination, with a gear casing and actuating mechanism mounted therein, of a guide shaft, a slide connected to said actuating mechanism and having reciprocating movement on the guide shaft, and an oil well adapted to be entered by an end of said slide, whereby oil will be forced to the slide and said guide shaft.

1,385,143. PUMPING APPARATUS. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers and Brother, Ashland, Ohio, a Copartnership consisting of Francis E. Myers and Philip A. Myers. Filed Jan. 19, 1920. Serial No. 352,319. 2 Claims. (Cl. 103—79.)



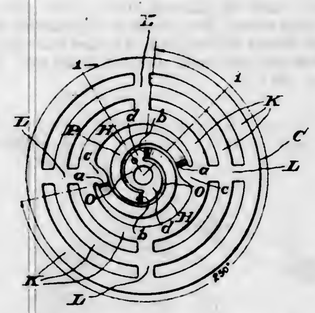
2. In a pumping apparatus, the combination, with a power head including a casing in which the power mechanism is housed, of a pump head detachably secured to a vertical face of said casing, a drop pipe secured to the lower part of the pump head and carrying a lower cylinder, an upper cylinder and an air cylinder carried by upper portions of the pump head, a piston rod common to the lower and upper water cylinders and another piston rod for the air pump cylinder, and connections between said piston rods and an operating arm of the power mechanism.

1,385,144. SELF-OILING POWER-PUMP. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers and Brother, Ashland, Ohio, a Copartnership consisting of Francis E. Myers and Philip A. Myers. Filed Nov. 13, 1919. Serial No. 337,644. 4 Claims. (Cl. 184—11.)



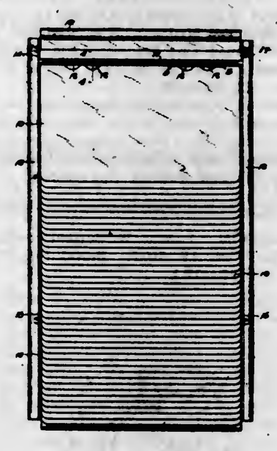
3. In a power head, the combination with a gear casing adapted to contain a supply of oil, a pump adapted to be arranged in operative relation to said power head, a stuffing box interposed between said pump and the gear casing and a piston rod operating through said stuffing box, of a receptacle for liquid arranged adjacent the stuffing box and between the pump and the gear casing, and means to conduct liquid escaping through the stuffing box from the pump casing into said receptacle, one of whose walls is lower than the wall dividing it from the gear casing whereby the liquid may automatically escape and overflow into the gear casing is prevented.

1,385,145. POWER-HEAD. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers and Brother, Ashland, Ohio, a Copartnership consisting of Francis E. Myers and Philip A. Myers. Filed Sept. 27, 1920. Serial No. 413,021. 4 Claims. (Cl. 74—14.)



1. In a power head the combination with a casing adapted to contain a quantity of lubricant and rotatable operating mechanism therein, of an actuating reciprocating sleeve member operable in the lubricant contained within the casing, integral slides extending from said member and a bearing block mounted in the slides and adapted to be actuated by the rotatable operating mechanism.

1,385,146. POWER-HEAD. PHILIP A. MYERS, Ashland, Ohio, assignor to F. E. Myers and Brother, Ashland, Ohio, a Copartnership consisting of Francis E. Myers and Philip A. Myers. Filed Sept. 27, 1920. Serial No. 413,022. 5 Claims. (Cl. 74—56.)

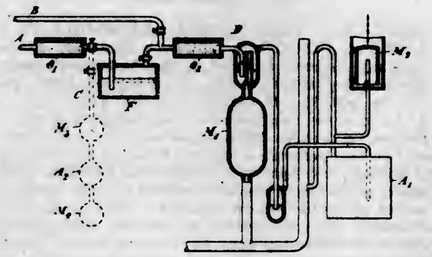


5. In a power head, the combination with a casing having bearings for shafts and adapted to contain operating mechanism and a quantity of lubricant and having an open portion and having an open side, of a walking beam projecting through and beyond the casing and attached to a pump standard, said beam being actuated by the operating mechanism contained within the casing.

1,385,147. PLATE-VALVE. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,238. 10 Claims. (Cl. 251—119.)

1. A sheet metal valve comprising a central portion, a continuous ring portion forming a valve plate adapted to seat over ports in a valve seat, and a plurality of nested integral spiral guide arms connecting said central and ring portions and adapted to lie wholly within the ring portion of the valve over the central unported area of a valve seat and function solely as guides in contradistinction to valve plates, the spiral curve of each of said guide arms being of sufficient length to subtend angles greater than 180° at the center of the valve.

1,385,148. FILING AND INDEXING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1918. Serial No. 260,847. 10 Claims. (Cl. 129—16.)

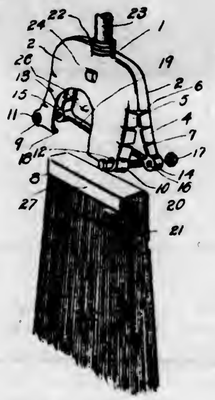


4. In a device of the character described, the combination of a tubular sheet-holder provided with a longitudinal slot, and a sheet received in said slot and having projections extending from opposite faces thereof within said sheet-holder.

1,385,149. STEEL FISHING-ROD. HOMER E. RAWSON, Chicago, Ill. Filed Mar. 21, 1921. Serial No. 454,068. 4 Claims. (Cl. 43—18.)

3. A fishing rod comprising a handle and a plurality of sections made of steel, said sections being adapted to be connected to one another and to the handle in a longitudinal series and being formed in progressively increased lengths.

1,385,150. GAS-ANALYZING APPARATUS. OLOF RODHE, Stockholm, Sweden, assignor to Svenska Aktiebolaget Mono. Filed June 8, 1918. Serial No. 238,991. 4 Claims. (Cl. 23—3.)

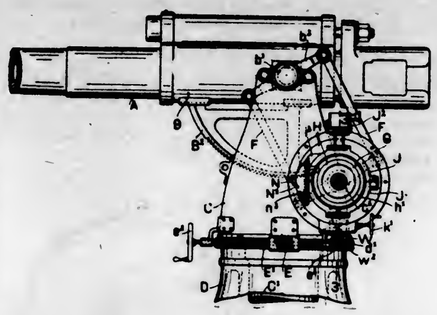


1. Gas-analyzing apparatus, characterized thereby, that in front of the gas-analyzing apparatus proper, provided

with absorption and measuring vessels, two furnaces for oxidation are arranged, an absorption receptacle with hydrate of potassium being arranged between the two furnaces.

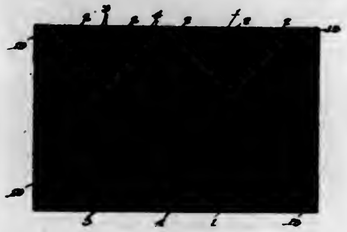
1,385,151. ELECTRIC BATTERY AND METHOD OF PREPARING MANGANESE MATERIAL THEREFOR. OTTO E. RUHOFF, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Feb. 26, 1919. Serial No. 279,404. 4 Claims. (Cl. 204—38.)

1. The method of preparing manganese for use as a battery material consisting in first roasting it at or above a visible red heat, then, after cooling, dissolving out all that a dilute acid, such as sulfuric or muriatic, will take up, then filtering and washing the residue.



1,385,152. BROOM. DANIEL W. SCHENCK, Kansas City, Kans. Filed Oct. 18, 1919. Serial No. 331,616. 3 Claims. (Cl. 15—19.)

1. In a broom head, a hollow member having a handle-receiving neck, the lower end of the member being slitted to provide flexible jaws, inturned, spaced flange members along the ends of the flexible jaws, movable apart when the jaws are expanded and movable together when the jaws are in clamping position, and means for drawing the flexible jaws together.



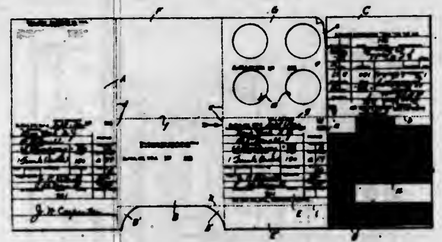
1,385,153. GUN WITH BARREL ADJUSTABLE IN A LATERAL DIRECTION. LEOPOLD SCHMIDT, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,386. 11 Claims. (Cl. 89—41.)

1. A gun of the class described comprising a gun barrel, a pedestal, a carriage for said gun barrel rotatably supported on said pedestal, a sighting telescope supported by said carriage, said sighting telescope being rotatable in its support, an operating member mounted on said carriage, a second operating member mounted on the support for the sighting telescope, gearing for rotating said sighting telescope, a traversing gear for the gun barrel, means operatively connecting the first mentioned operating member to the traversing gear and to the sighting telescope gear, means connecting the second operating member to the sighting telescope gearing whereby the gun barrel and sighting telescope may be traversed simultaneously through the same angle but in opposite directions, when

the second operating member is held stationary and the first operating member is rotated.

1,385,154. TOY BUILDING-BLOCK. WILLIAM SCOTT SHIELDS, Trenton, N. J. Filed Mar. 8, 1920. Serial No. 363,970. 6 Claims. (Cl. 46—35.)

3. A block having longitudinal grooves on one face and tongues at its ends, and having cross grooves on the other face.

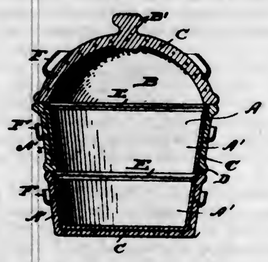


1,385,155. TOY BUILDING-BLOCK. WILLIAM SCOTT SHIELDS, Yardley, Pa. Original application filed Mar. 8, 1920, Serial No. 363,970. Divided and this application filed June 22, 1920. Serial No. 390,699. 4 Claims. (Cl. 46—35.)

4. A toy building block comprising a flat body of elongated formation having its ends formed with longitudinal slots defining spaced tongues, said body being provided intermediate its ends with spaced openings to receive the tongues of similar bodies.

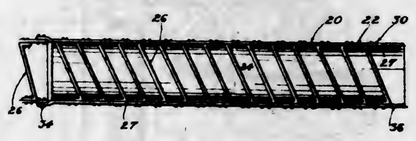
1,385,156. SHIPPING APPLIANCE. FREDERICK PERCIVAL SMALL, Ridgefield, N. J. Filed Nov. 10, 1920. Serial No. 423,120. 2 Claims. (Cl. 283—23.)

1. The herein described shipping appliance composed of a single rectangular sheet, one end portion of which is foldable endwise directly upon the next adjacent portion and a part of the portion thus folded being foldable in a different direction upon the remaining part of the end



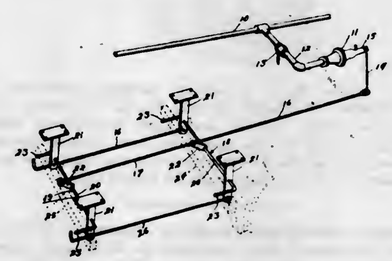
portion, the part last mentioned being slitted free from the portion of the sheet upon which it is first folded whereby the folding in the other direction is readily possible.

1,385,157. COUPLING-NIPPLE. JAMES C. SMITH, Tulsa, Okla. Filed Aug. 28, 1919. Serial No. 320,883. 4 Claims. (Cl. 285—146.)



1. A coupling nipple of the character described comprising a double ended nipple body internally threaded at one end and exteriorly threaded at its opposite end, the threaded portions being interrupted by channels transverse to the threads.

1,385,158. ICELESS REFRIGERATOR. MILTON A. SNIDER, Detroit, Mich. Filed Aug. 5, 1920. Serial No. 401,327. 3 Claims. (Cl. 45—132.)

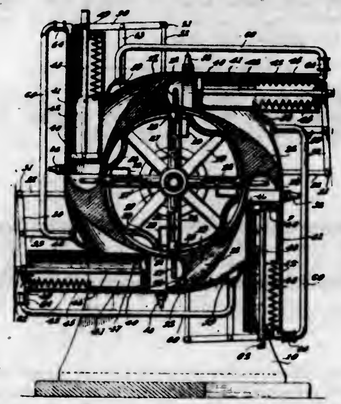


2. In a device of the character described, a vessel formed of porous moisture absorbing material, and a plurality of elastic rubber bands having one edge lodged in grooves formed in the wall of said device and with an upstanding wall spaced from the wall of the vessel to form a water trough, whereby the porous walls of the vessel may be supplied with moisture.

1,385,159. ARMOR FOR VEHICLE-TIRES. WILLIAM G. STOCKHAM, Piqua, Ohio. Filed July 8, 1920. Serial No. 393,848. 2 Claims. (Cl. 152—16.)

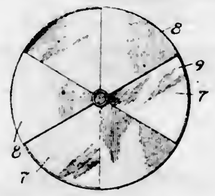
2. A tire armor comprising a plurality of segmental sections, each consisting of a transversely arched web, parallel flanges projecting outwardly from the side edges of the web, and cleats resting at their centers upon the arched web and extending obliquely between the flanges and having their opposite end portions extending longitudinally of the segmental section in opposite directions and secured rigidly to the inner sides of the parallel flanges but free of the arched web, the flanges on each section having offset extensions at one end overlying and secured rigidly to the ends of the flanges on an adjacent section, said ends of the adjacent section being parallel and abutting the said offset extensions.

1,385,160. AIR-BRAKE SAFETY APPLIANCE. HENRY C. STOKES, Sumter, S. C. Filed Sept. 29, 1920. Serial No. 413,508. 3 Claims. (Cl. 246—169.)



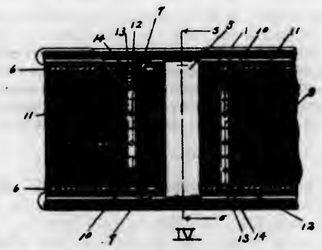
3. In combination with a railway air brake system, a valve for exhausting air from the train pipe for actuating the system, and provided with a casing, levers adapted to be actuated by the displacement of the brakes or brake beams connected with said valve for opening the same, and means within the valve casing for maintaining said valve open after it has once been actuated by said levers.

1,385,161. INTERNAL-COMBUSTION ENGINE. STUART R. THORNTON, Berkeley, Calif. Filed June 11, 1919. Serial No. 303,325. 11 Claims. (Cl. 123—14.)



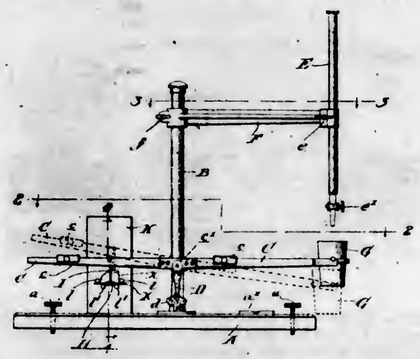
1. In a rotary engine, the combination of a stator, a rotor therein, abrupt shoulders forming compression abutments, pistons extending tangentially from the circumference of the rotor for co-action with said abutment to compress fuel in the stator, means operated by rotation of said rotor for retracting said pistons, said abutments

provided with cup-shaped recesses forming fuel-receiving pockets, fuel supply pipes extending into said pockets,



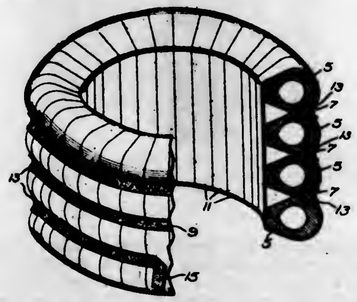
and means operated by rotation of said rotor for controlling the inlet of fuel into said pocket.

1,385,162. MOTION-PICTURE-PROJECTION APPARATUS. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 27, 1917. Serial No. 157,595. 4 Claims. (Cl. 88—19.3.)



4. A shutter for a projecting machine comprising a base member of opaque material having a plurality of apertures formed therein and solid transparent heat screens mounted in the apertures, said screens having the property of selective retardance of the heat rays and transmission of high percentage of visible rays.

1,385,163. TEMPORARY BINDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed May 14, 1920. Serial No. 381,312. 12 Claims. (Cl. 129—1.)

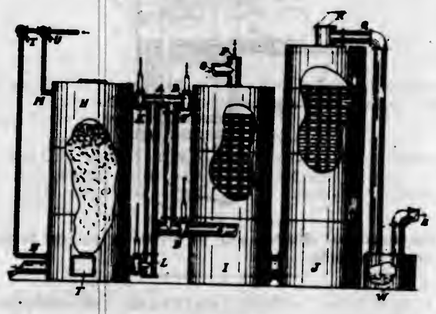


12. In a temporary binder, the combination of binder members, binding members for said binder members, and posts removably engaging said binder members and provided with sheet engaging heads.

1,385,164. PAPER-TESTER. GEORGE S. WITHAM, Jr., Hudson Falls, N. Y. Filed May 14, 1920. Serial No. 381,289. 6 Claims. (Cl. 265—15.)

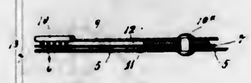
1. An instrument for testing the flexibility of paper comprising a support in which a sample of paper to be tested is loosely mounted, a bending device for bending the paper both lengthwise and crosswise of the grain and for moving the paper flatwise through the support, a liquid receptacle connected with the bending device and a calibrated tube for delivering liquid to the receptacle.

1,385,165. PACKAGE. EDWARD H. ANGIER, Framingham, Mass. Filed Oct. 7, 1920. Serial No. 415,234. 4 Claims. (Cl. 206—46.)



1. A package comprising a plurality of assembled articles providing grooves between them, a wrapping inclosing the articles and binders encircling the package and tensioning the wrapping by drawing it down into said grooves.

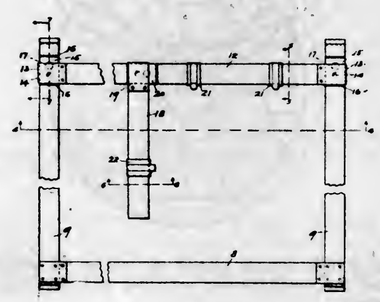
1,385,166. BREAKWATER. JAMES JERVIS BAGNALL, Day's Bay, Wellington, New Zealand. Filed July 23, 1919. Serial No. 312,653. 3 Claims. (Cl. 61—4.)



1. A breakwater of the character described comprising an anchoring element adapted for arrangement at the bottom of a body of water, spaced loops carried by the anchoring element, a plurality of rigid uprights, spaced hooks carried by each upright and engaged with one of the loops forming a flexible connection between said loop and upright, and floats secured to the down stream side of said uprights.

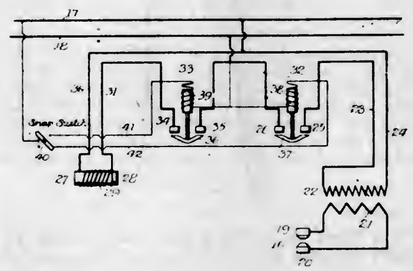
1,385,167. PROCESS OF MANUFACTURING GAS FOR LIGHTING OR HEATING PURPOSES FROM BITUMINOUS FUELS. CLAUDE WINFIELD BOTSFORD, Los Angeles, Calif. Filed June 13, 1919. Serial No. 303,830. 2 Claims. (Cl. 48—205.)

1. A process for the manufacture of carbureted gas using bituminous coal or other fuel containing volatile matter as generator fuel in theree stages consisting in, first, blasting the ignited fuel contained in a generator with an oxygen containing gas, burning the blast so generated to complete combustion in suitable carbureting chambers by supplying oxygen to them; then, when these chambers are sufficiently hot, shutting off their oxygen supply and blasting the generator fuel until it is sufficiently hot for gas making purposes conducting the blast gas new generated into a holder; and third, shutting off the generator blast and injecting steam into the fuel bed for the purpose of steam distilling the fuel and simultaneously making water-gas, carbureting the gas thus produced and conducting it to the holder containing the recovered blast gas where it is mixed with the latter in proportions as generated, substantially as described.



1,385,168. CHECK-PROTECTOR. VITUS A. BOKER, Minneapolis, Minn. Filed Mar. 6, 1920. Serial No. 363,727. 2 Claims. (Cl. 101—19.)

1. A check protector adapted to be carried in a check book having in combination, a die plate having perforations forming the characters to be punched, said perforations being constructed as female die members opening through the bottom of the protector and being unobstructed to permit discharge of the punchings, a stripper plate circumferentially notched and formed with radial projecting portions having perforated characters alining with the perforations in said die plate, and a punch plate having radial arms carrying punches arranged to form the characters to be punched, the ends of said punches being flat and perpendicular to the sides thereof and adapted to cooperate with the dies in the die plate to completely sever the portions of the check, said stripper plate being disposed between the die and punch plates.

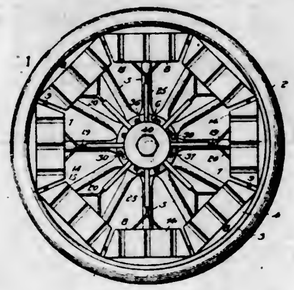


1,385,169. GAGE AND GUIDE FOR PRESS-PLATENS. EBER R. BRADLEY, Hood River, Oreg. Filed Feb. 19, 1921. Serial No. 446,448. 4 Claims. (Cl. 101—413.)

1. In a device of the kind described, the combination of, a frame of rectangular form having angled parts in quadrangular position extending downwardly, adapted to be engaged by a bail of common type and the frame to be thereby secured in a desired position upon a conventional platen, a transverse bar having each end slidably positioned on the side members of the frame, with indentations near the bar ends adjacent to the surface of the frame, and a sliding catch positioned between the

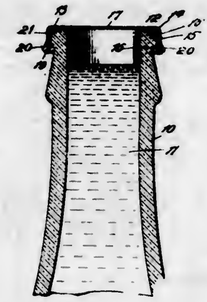
bar and frame, the catch having an opening therein alined to receive the said bar indentation and allow the bar and catch to slide upon the frame and the bar to be rigidly secured upon the frame when the opening of the catch is moved out of alinement with the indentation.

1,385,170. METHOD OF AND MEANS FOR REGULATING A SYSTEM SUBJECT TO LARGE INTERMITTENT LOADS. ALFRED HERZ, Chicago, Ill. Filed Nov. 26, 1915. Serial No. 63,439. 4 Claims. (Cl. 171—97.)



4. In combination, a line, a lamp circuit connected to the line, a load circuit also connected to the line, a load device adapted to be intermittently connected to the load circuit, said load device being of such character as to draw a relatively large current at relatively high power factor whereby a voltage drop largely of I R character is caused in the line such as to disturb the illumination of the lamps and an inductive load adapted to be substituted for the load device and vice versa, said inductive load device being of such a character as to draw current at a relatively low power factor and to cause a voltage drop largely of I X character of substantially the same effect on the lamp circuit as the drop caused by said load device and means for substituting said inductive load device for said load device and vice versa.

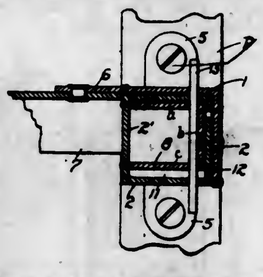
1,385,171. VEHICLE-WHEEL. JOHN HOFFMAN, Port Huron, Mich. Filed July 3, 1919. Serial No. 308,350. 2 Claims. (Cl. 301—46.)



1. A vehicle wheel comprising an auxiliary rim formed of a series of curved members pivotally secured at one side of the wheel and adapted to form a substantially complete

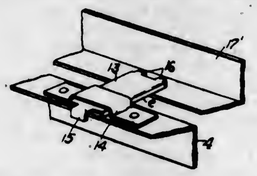
rim when extended, said members having their ends cut at an angle coincident with the radii of the wheel for permit-

ting of their collapse against the side of the wheel, and means for simultaneously extending and retracting said members.



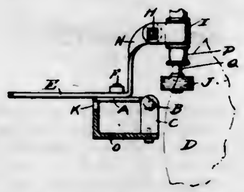
1,385,172. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed July 7, 1917. Serial No. 179,129. 5 Claims. (Cl. 215—10.)

1. A crown cap having a top, a skirt portion, an inwardly extending shoulder at the lower edge thereof, creating an annular vertical recess around the outer peripheral portion of the cap, and a flange below said shoulder to be crimped upon a bottle neck, and a gasket within the skirt portion of said cap above said shoulder, said gasket normally having an outer wall engaging said skirt portion, an upper edge engaging the top of the cap, and an inner wall having a downwardly and outwardly diverging lower edge and normally standing in the path of the surfaces surrounding the mouth of the bottle to which the cap is to be applied, and said gasket being a vertical band extending along said recess from the top of the cap to a point adjacent to the shoulder at the lower edge of said recess, the top of the cap when in sealing position engaging the rim of the mouth of the bottle.



1,385,173. CORNER-FASTENING FOR BEDS. BENJAMIN H. JONES, St. Louis, Mo., assignor to Smith & Davis Manufacturing Co., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 27, 1921. Serial No. 440,389. 3 Claims. (Cl. 5—55.)

1. In combination with a structural member of a bed, a corner-fastening comprising an outer and an inner shell spaced apart to provide a three-way pocket, said shells having registering openings in the top and bottom walls thereof, said structural member also having openings, and a key adapted to coöperate with the openings in the shells and one of the openings in the structural member whereby



the structural member may be reversibly secured to the corner-fastening.

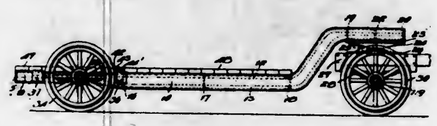
1,385,174. SPRING-MATTRESS AND SUPPORT THEREFOR. BENJAMIN H. JONES, St. Louis, Mo., assignor to Smith & Davis Manufacturing Co., St. Louis, Mo., a Corporation of Missouri. Filed Feb. 4, 1921. Serial No. 442,427. 3 Claims. (Cl. 5—29.)

1. In a device of the character described, a member provided with a strap, a channel-shaped slide mounted between the member and strap, and means for holding said slide in place.

1,385,175. SAW-GRINDING JIG. HARRY A. JONES and EDWARD W. STRUVE, Parsons, Kans. Filed Jan. 20, 1920. Serial No. 352,657. 1 Claim. (Cl. 51—166.)

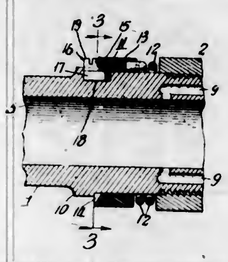
In a device of the character set forth, a supporting table, an angular flange extending therefrom, uprights at the edge of the table opposite the flange, a base pivoted to the uprights at one edge and adapted to have its opposite edge supported by means of the flange of the table, a standard pivotally mounted upon the base and provided with an operating handle, and a grinding wheel carried by the standard.

1,385,176. SOFT-COLLAR HOLDER. FELIX P. KINTZELE, St. Louis, Mo., assignor to Krisman-Frey Jewelry Mfg. Co., Inc., St. Louis, Mo., a Corporation of Missouri. Filed May 9, 1921. Serial No. 468,090. 4 Claims. (Cl. 24—81.)



1. A soft collar holder, comprising two arcuate members, telescoping one within the other for a part of their length, an expansion spring within the two telescoping members limiting outward longitudinal movement thereof and

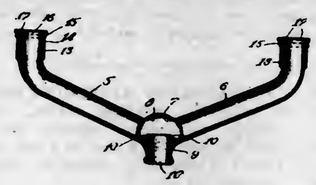
actuating said members to telescope one within the other, a hook rigid with and extending inwardly from the concave side of each of said members near the outer ends



thereof, and a pivoted clasp supported by each telescoping member and arranged to coöperate with the hook on said member for the purpose described.

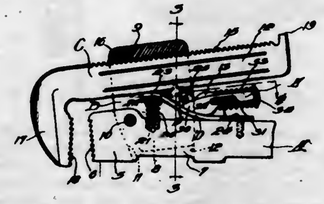
1,385,177. SEMITRAILER. ALBERT P. LEE, Chicago, Ill., assignor to Lee Trailer & Body Co., Chicago, Ill. Filed Nov. 6, 1919. Serial No. 336,043. 2 Claims. (Cl. 280—33.1.)

2. A semitrailer comprising a framework having a raised portion adapted to be supported upon the framework of a pulling vehicle, and a depressed rear portion, said depressed rear portion being supported by an axle having a depressed portion, and means for preventing swinging of said axle relatively to the framework, said means comprising radius rods connecting the lower portion of the axle to the framework and adjustable radius rods connecting the upper portion of said axle to said framework, said radius rods being disposed in pairs at opposite sides of said framework.



1,385,178. VALVE-HOUSING OR HANDLE-LOCK FOR PNEUMATIC TOOLS. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed June 1, 1920. Serial No. 385,438. 4 Claims. (Cl. 285—177.)

4. In a pneumatic tool, the combination of a barrel, a member having threaded connection with said barrel at one end thereof, a rib on the barrel, a ring rotatably and slidably mounted on said barrel and having ratchet teeth in one edge thereof, a spring encircling said barrel between said ring and said member and having its ends bent in opposite directions and engaging in sockets in said member and ring, respectively, and a key having an integral base and head, the former being rotatably seated in a recess in said barrel at said rib and overlapped by said ring, and said head having a tube to engage the ratchet teeth on said ring and provided with a slot to permit turning of said key.



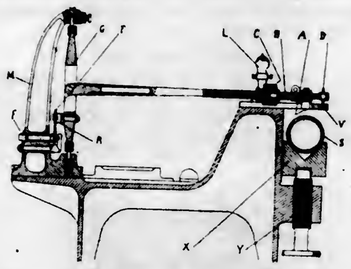
1,385,179. LIQUID-MIXING DEVICE. JOHN W. LISKA, Chicago, Ill. Filed Mar. 19, 1920. Serial No. 367,201. 1 Claim. (Cl. 137—111.)

A liquid mixer comprising a one piece elastic liquid conductor having two conduits joined at their meeting ends by a part inclosing a mixing chamber; a nozzle, extending into the mixing chamber in the path provided

by the conduits, and means within the chamber to divert the liquid from the conduit into the mixing chamber and away from the nozzle.

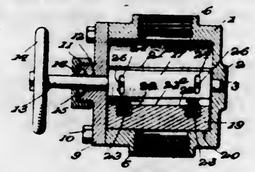
1,385,180. WRENCH. AUGUST S. LIZAK, Chicago, Ill., assignor to Kentowski & Company, Chicago, Ill., a Copartnership consisting of M. E. Kentowski, T. E. Winiarski, and August S. Lizak. Filed Oct. 25, 1920. Serial No. 419,279. 5 Claims. (Cl. 81—145.)

1. In a wrench, the combination of a handle provided with a fixed jaw, a U-shaped frame mounted on the handle and provided with ratchet teeth which face the handle in spaced relation thereto, a jaw movably arranged within the frame and provided with ratchet teeth adapted to cooperate with those in the frame, a leaf spring carried by the handle and pressing on the movable jaw to maintain its ratchet teeth in engagement with those in the frame, a pin arranged transversely in the frame, and a wedge arranged for projection between the pin and leaf spring to depress the latter whereby the movable jaw may be freely moved within the frame, substantially as described.



1,385,181. ELECTRIC-CURRENT RELAY. CHARLES O. LORENZ, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed July 20, 1917. Serial No. 181,864. 8 Claims. (Cl. 200—111.)

2. A relay comprising a tubular member having a solenoid intermediate the ends of the tube and containing

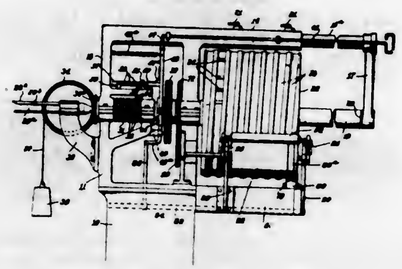


within the magnetic flux of the solenoid an upper laminated core and a lower core of non-magnetizable material having a magnetizable shell, a conducting rod connected with the lower core for movement therewith, and a contact adapted to be engaged by said rod.

1,385,182. APPARATUS FOR MEASURING THE HARDNESS OF BODIES. AUGUSTE MAIRE, Argenteuil, France, assignor to Societe Lorraine des Anciens Etablissements de Dietrich & Cie. de Luneville, Paris, France. Filed Oct. 31, 1918. Serial No. 260,499. 6 Claims. (Cl. 205—14.)

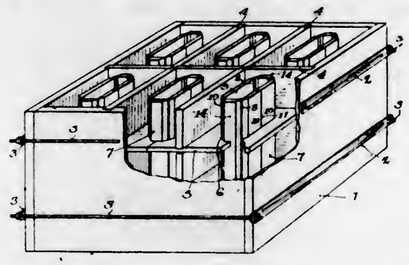
1. An apparatus for measuring the hardness of a stationary body comprising in combination a diamond, a pivotally mounted supporting member upon which said diamond is rigidly secured, means for moving bodily said pivoted supporting member and the diamond with a progressively increasing force so as to tend to move the diamond across the surface of the stationary body and means for measuring the variable value of said force.

1,385,183. VALVE. HARVEY G. MAULE, Seattle, Wash., assignor of one-half to Reginald A. Pearce, King county, Wash. Filed July 8, 1920. Serial No. 394,655. 1 Claim. (Cl. 251—102.)



A valve comprising a body member formed with an inlet and an outlet and open at one side, a plate closing said open side and removably secured to the valve body member, a valve mounted for rotation within the body and coöperating with the inlet and outlet for valve functions, said valve having spaced parallel wings extending therefrom, and a valve operating member supported in said plate and removably supported in the opposite end of the valve body, said valve operating member having a rectangular portion to fit between the spaced parallel wings of the valve, means connecting said rectangular portion and said wings to permit limited independent movement of said rectangular portion and valve, and springs interposed between said rectangular portion and valve and seated in recesses in the latter to normally maintain the valve in valve operating position, the mounting of the valve operating member in the removable plate for the valve body and the support of the valve from said operating member, permitting the removal of the valve and operating member with the plate closing the open end of the valve body.

1,385,184. METHOD FOR FINISHING LEATHER. WYMAN H. MEADE and SVEN H. FRIBERTEDT, Camden, N. J. Filed Oct. 14, 1919. Serial No. 330,636. 3 Claims. (Cl. 91—68.)

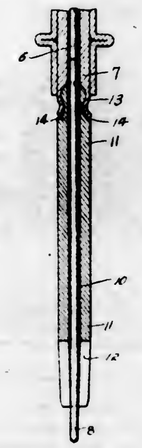


1. As a new article of manufacture, leather having a coating including selenium.

1,385,185. MACHINE FOR MARKING PERFORATED MUSIC-ROLLS. PHILIP J. MEAHL, Summit, N. J. Filed Aug. 24, 1920. Serial No. 405,614. 26 Claims. (Cl. 101—92.)

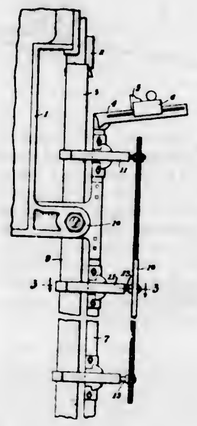
1. In a device of the character described, a member adapted to receive printing characters about its periphery, and means for imparting a continuous rotary and transverse movement to said member.

1,385,186. APPARATUS FOR MAKING BUILDING-BLOCKS. JAMES A. MUTH, Milwaukee, Wis. Filed Dec. 30, 1919. Serial No. 348,342. 11 Claims. (Cl. 25—121.)



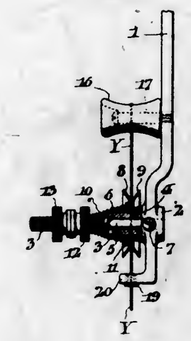
1. In a building block apparatus, the combination of a collapsible, substantially rigid core having a plurality of hingedly joined members, and means for separating a pair of blocks, said means having an opening conforming to said core, and said core arranged to pass through said means and into a pair of adjacent blocks, the walls of said opening limiting the extent of expansion of said core.

1,385,187. PENCIL. PHILIP W. OLSON, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a Corporation of Delaware. Filed Dec. 15, 1919. Serial No. 345,113. 5 Claims. (Cl. 120—18.)



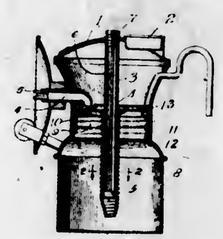
1. A pencil comprising a shell having a tapered inner wall at one end and a lead opening at the apex of said tapered wall; a lead tube having a portion held rigidly against lateral movement in said shell and a portion engaging said tapered inner wall; and a connection between

said portions permitting the second-mentioned portion of the shell to yield laterally out of alinement with said



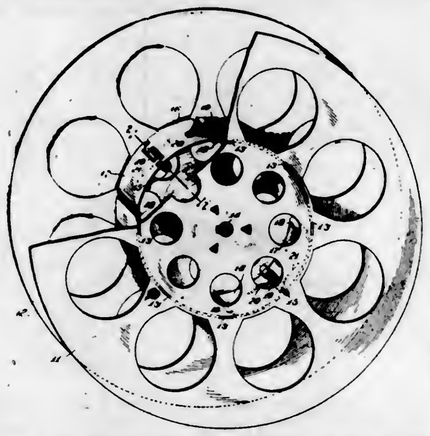
first-mentioned portion, the yielding of said second-mentioned portion being controlled by said tapered inner wall.

1,385,188. ADJUSTABLE CLAMP FOR LOG-HOLDERS. DENNIS PARKS, St. Louis, Mo. Filed June 18, 1920. Serial No. 390,017. 6 Claims. (Cl. 12—42.)



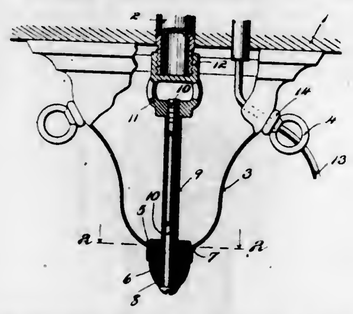
1. A log-holder having an open upper end for receiving heel-blanks, lifts or the like to form the log and extending thence downward for an indefinite distance, said holder comprising two members providing between them an uninterrupted space throughout the length of the holder for accommodating the log, one of said members being movable for varying the area of said space, and means for adjusting said movable member uniformly throughout its length relative to the other member from any point in the length of the holder.

1,385,189. YARN-TENSION DEVICE. ALBERT M. PIGEON Norristown, Pa. Filed Sept. 19, 1919. Serial No 324,888. 3 Claims. (Cl. 242—150.)



3. A yarn tension device comprising a pair of yieldingly opposed, freely rotatable, tension disks; a spool shaped element located beyond said disks about which the yarn, after having passed tangentially between the disks at one side, is reversed in the direction of its travel and reguided to repass in a like manner between the disks at the opposite side; and a pair of guide eyelets adapted for coöperation with the spool element in maintaining the oppositely moving portions of the yarn in parallelism as they pass between the tension disks.

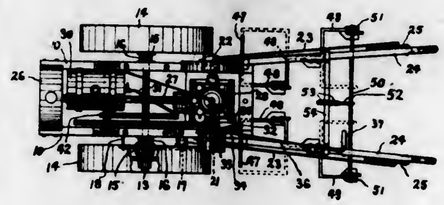
1,385,190. ACETYLENE-GAS LAMP. JACOB S. SHERMAN, Chicago, Ill., assignor to Universal Lamp Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1918. Serial No. 212,217. 4 Claims. (Cl. 48—27.)



4. In an acetylene gas generator, the combination of a water container, a carbid container, a water discharge tube communicating with the former and extending a substantial distance into the latter, a helical spring encompassing the tube for substantially its entire extent within the carbid container and depending below the discharge end of the tube, said spring normally being spaced from the wall of the tube to afford a channel for upward progress of water therebetween, and a water control member disposed within the guard and coöperating with the lower portion of the tube and extending transversely thereof in position to receive water therefrom and direct it toward the encompassing portion of the spring, the periphery of said water control member lying adjacent encompassing coils of the spring in position to impinge water thereon adjacent the lower end of the tube, and means for adjusting said water control member.

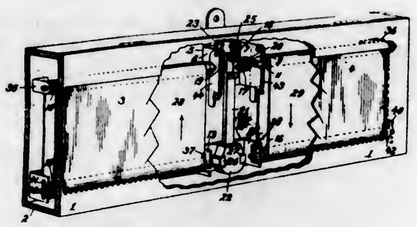
1,385,191. FILM-REEL. FRANKLIN SPAULDING, Chicago, Ill., assignor to George W. Christopher, Chicago, Ill. Filed Aug. 30, 1919. Serial No. 320,886. 5 Claims. (Cl. 242—74.)

1. A film reel comprising a drum about which a film may be wound, a section of the drum being omitted, and a spring closed gripping door located in the omitted portion, its swinging margin bearing outwardly against a transverse edge portion of the drum.



1,385,192. ELECTRIC-LIGHTING FIXTURE. PETER W. SPRECHER, Milwaukee, Wis. Filed Mar. 1, 1920. Serial No. 362,369. 1 Claim. (Cl. 240—85.)

An electric lighting fixture comprising an attaching yoke composed entirely of metal and having a threaded aperture at one end. An internally threaded socket at the other end of the yoke for receiving the threaded end of a gas pipe, the bottom of the socket being adapted to close the end of the pipe, a canopy disposed over the yoke and having an opening in its extremity, an insulating block in said opening and having a bore, an attaching screw disposed through the bore of the block and threaded in the aperture of the yoke, and an insulating sleeve surrounding the screw, said canopy being provided with uninsulated openings in its sides for the current distribution wires.



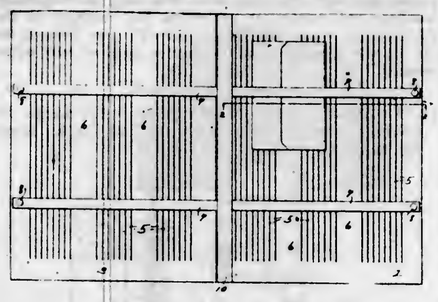
1,385,193. CULTIVATOR ATTACHMENT. CHARLES F. SHOWALTER, Omaha, Nebr. Filed June 18, 1920. Serial No. 389,854. 2 Claims. (Cl. 97—42.)

1. In a tractor, a wheeled frame, depending supports carried upon the rear end of the frame, a pair of sockets mounted on the lower ends of the supports, cultivator bars secured at their forward ends to the sockets and having depending cultivator teeth, a pair of rearwardly extending handles mounted on the frame, a cross piece supported

upon the handles, a yieldably supported link carried by the cross piece, and a bail mounted on the lower end of the link and having connection with the rear ends of the cultivator bars.

1,385,194. ADVERTISEMENT DEVICE. CHARLES HAROLD WAITHMAN, London, England, assignor to James William Carr, Halifax, York, England, and James Gardiner, London, England. Filed Jan. 29, 1920. Serial No. 355,017. 4 Claims. (Cl. 40—51.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

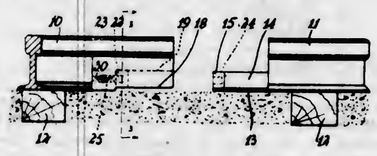
1. In an advertising device, the combination with a frame adapted to be mounted on a vehicle, of a pendulum, a pivot therefor, a ratchet wheel, and a gear wheel driven thereby mounted on said pivot, a pawl on the frame, a pawl on the pendulum, said pawls engaging said ratchet wheel, rollers having their axes disposed in a plane substantially parallel to the plane in which the pendulum swings, a pinion carried by one of said rollers and meshing with said gear wheel and a visible surface adapted to be moved by said driven roller.



1,385,195. REMEDY FOR HEMORRHOIDS. FRED B. WELLS, Hillyard, Wash., assignor to Charles Durant, Hillyard, Wash. Filed Aug. 13, 1919. Serial No. 317,214. 3 Claims. (Cl. 167—9.)

3. A remedy for hemorrhoids, comprising ox bile and alcohol, the proportion of bile present being greater than the proportion which may be dissolved by the alcohol present, the excess bile remaining in suspension in the solution.

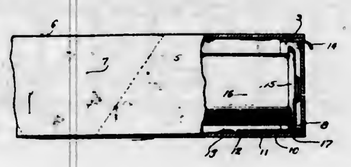
1,385,196. PHOTOGRAPH-ALBUM. LUCILE L. WITTE. Kiel, Wis. Filed June 16, 1919. Serial No. 304,475. 6 Claims. (Cl. 129—20.)



1. A photograph album having leaves provided with substantially parallel flat card retaining bands arranged

in groups extending from the top to the bottom margins thereof, said bands being grouped whereby a photograph

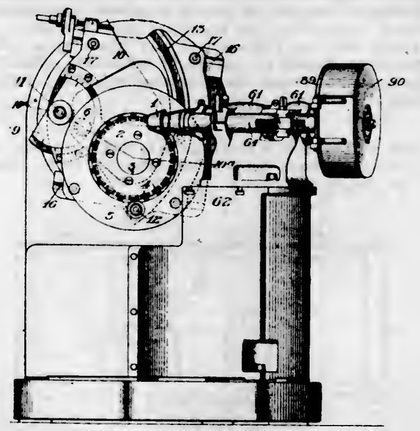
card may be engaged adjacent to its edges by one band from each of two groups.



1,385,197. RAIL-JOINT. JOSEPH ZYGMAN, Greenwich, Conn. Filed May 21, 1921. Serial No. 471,491. 4 Claims. (Cl. 238—235.)

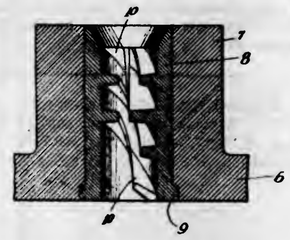
1. A pair of rail ends having interlocking elements preventing longitudinal displacement, and a bolt carried in a longitudinal socket in one rail end and projecting into a registering longitudinal socket in the other rail end.

1,385,198. [WITHDRAWN.]



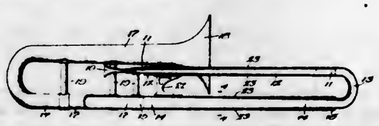
1,385,199. MUSIC-ROLL CONTAINER. WILLIAM L. BUEDINGEN, Milwaukee, Wis. Filed Mar. 26, 1920. Serial No. 369,128. 2 Claims. (Cl. 206—52.)

1. A roll receiving carton having an open end, a cover normally closing said end, and a portion carried by the cover and slidable within the carton, said portion having a recess therein in which the adjacent end head of a roll within the carton is engageable when the cover is in closed position to insure the positive partial withdrawal of the roll from the carton when the cover is moved to open position.



1,385,200. GEAR-CUTTING MACHINE. EDWARD W. BULLOCK and GEORGE H. BRYAN, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 7, 1917. Serial No. 173,313. 18 Claims. (Cl. 90—4.)

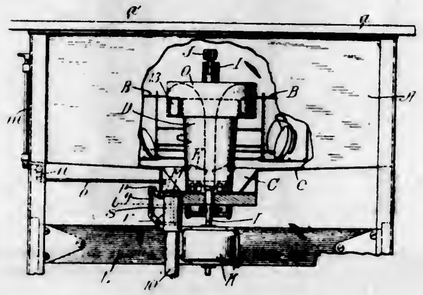
1. In a gear cutting machine, the combination with a cutter spindle, of a sleeve in which the cutter spindle is freely rotatable and held against relative endwise movement, a cam and coöperating cam member, one of which



parts is carried by said sleeve, and means for driving one of said cam parts to effect endwise reciprocating movement of the sleeve and cutter spindle.

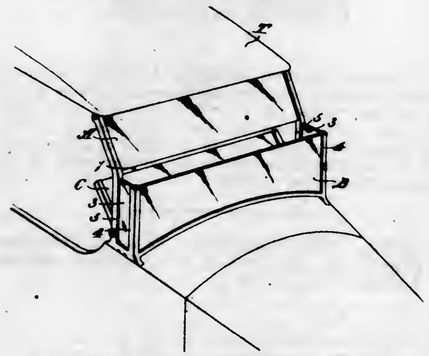
1,385,201. CASTING APPARATUS. CHARLES E. CHAPPLE, Brooklyn, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 29, 1919. Serial No. 341,454. 5 Claims. (Cl. 22—134.)

1. Casting apparatus embodying a member having an ingate formed therein, said ingate having surfaces therein at an angle to the axis thereof, so arranged as to guide the fluid metal poured into said ingate and to prevent the unimpeded passage through the ingate of substantially all the fluid metal poured therein at any point in the cross-sectional area thereof.



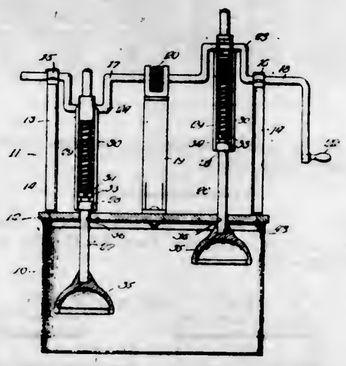
1,385,202. SLIDE-TROMBONE. ERNST A. COUTURIER. Laporte, Ind. Filed June 25, 1919. Serial No. 306,582. 4 Claims. (Cl. 84—395.)

2. In a trombone, the combination of a cylindrical bell-branch, a mouthpipe of progressively increasing diameter, a slide comprising a cylindrical leg telescopically surrounding said mouthpipe and slidingly fitting the larger



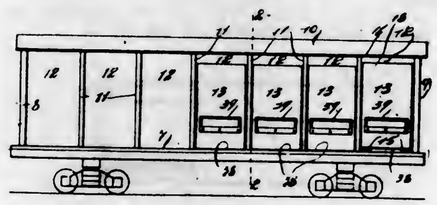
end thereof and a leg of progressively increasing diameter telescopically disposed within said bell-branch, the bore through said instrument being devoid of restrictions irrespective of the position of said slide, and tapered guide collars surrounding said mouthpipe and the tapered leg of said slide, the perimeters of said collars being cylindrical and adapted to slidingly fit within the cylindrical leg of said slide and the cylindrical bell-branch respectively.

1,385,203. DISH-WASHING MACHINE. JAMES W. CROOKS, Pelham, N. Y. Filed Sept. 25, 1919. Serial No. 326,244. 4 Claims. (Cl. 141—9.)



3. A dishwashing machine having, in combination, a dishholding tank; an upwardly expanding stationary casing within said tank communicating at its lower end with said tank and open at its top; and a rotary water elevator and distributer, the elevator consisting of an elevating propeller located near the bottom of said casing which forces the water upwardly through the casing, and a distributer comprising an outer trough at the top of said casing and receiving water therefrom, and having an outlet in its outer wall.

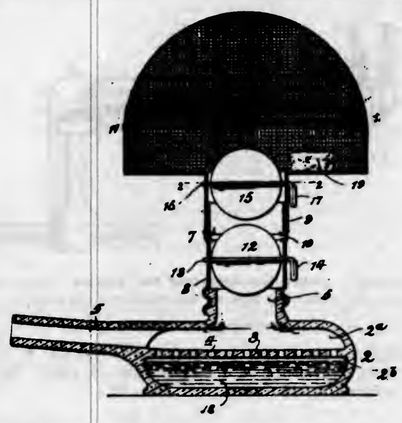
1,385,204. WINDSHIELD FOR VEHICLES AND CONVEYANCES. WILLIAM DE F. CROWELL, St. Louis, Mo. Filed Dec. 31, 1917. Serial No. 209,738. 3 Claims. (Cl. 296—84.)



1. A wind shield for vehicles and conveyances, comprising a rearwardly-inclined upper member whose upper edge terminates in close enough proximity to the front edge of the top of the vehicle to permit the air which travels upwardly over the front side of said member to escape rearwardly over the top of the vehicle, a baffle arranged in advance of the bottom edge of said upper member with its top edge positioned far enough below the bottom edge of said upper member to form a clear vision slot, said baffle causing air to be deflected upwardly across said slot and onto the front side of said upper member, and means for protecting the operator of the vehicle from water that blows through said clear vision slot or which drips from the bottom edge of said upper member.

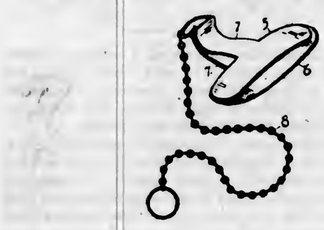
1,385,205. WASHING-MACHINE. LESTER H. DE COSTER, Jackson, Mich. Filed Apr. 15, 1920. Serial No. 374,002. 1 Claim. (Cl. 68—19.)

In combination with a washing machine having a tub; a substantially closed cover therefor; a crank rotatably supported on the cover; a plunger rod passing through the cover and pivoted in the opening of the cover; a bracket slidable on the rod and pivoted to the crank; a ring spaced away from the bracket, slidable on the rod; side rods on each side of the plunger rod connecting the ring and bracket; a spring wound about the plunger rod and bracket and an axially adjustable collar on the plunger rod at one end of the spring.



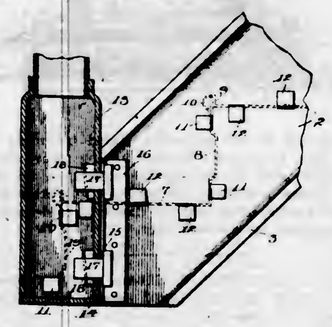
1,385,206. FREIGHT-CAR. EMIL DIMOND, Providence, R. I. Filed Mar. 7, 1921. Serial No. 450,244. 5 Claims. (Cl. 105—366.)

1. The combination of a freight car open at the sides thereof, partitions extending transversely thereof to provide compartments, platforms having wheels permanently connected thereto arranged to be moved into or out of said compartments, a closed box carried by each platform having openings for loading same, and means to lower each box upon its wheels after it has been moved into a compartment to cause said box to rest upon a portion of the car.



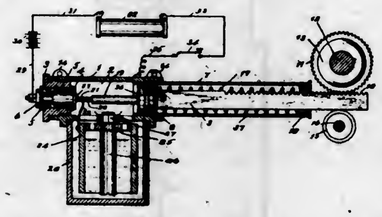
1,385,207. INSECT-TRAP. AMBROISE GARDON, Peterson, Saskatchewan, Canada. Filed Apr. 1, 1921. Serial No. 457,623. 4 Claims. (Cl. 43—107.)

3. A fly trap comprising a vessel divided into two horizontal compartments, said compartments separated by a perforated partition, the upper one of said compartments having a contracted inlet for ingress of flies, and a relatively large outlet, the lower one of said compartments containing bait, and a tubular fly-way comprising two telescopic sections, said sections respectively having a



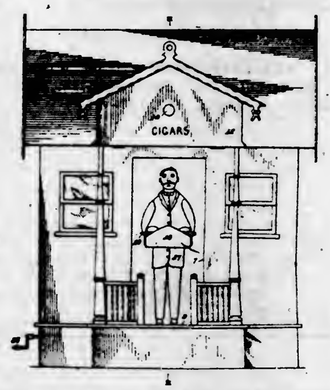
normally open door, and a housing composed of wire netting communicating with and connected to the upper one of said sections, said housing containing bait.

1,385,208. ANTIRATTLER FOR WINDOWS. DANIEL B. GEDDES, Newark, N. J. Filed Dec. 3, 1920. Serial No. 427,991. 3 Claims. (Cl. 292—19.)



1. An anti-rattler for windows comprising two bowed leaf springs which bear together at their ends and each of which has a transverse branch from its middle, the two branches being connected to hold the springs together, substantially as described.

1,385,209. STAIR STRUCTURE. AKOS J. HALL, Cleveland, Ohio. Filed Sept. 23, 1919. Serial No. 325,613. 8 Claims. (Cl. 189—43.)

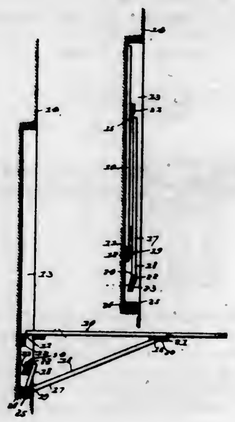


1. In a stair structure, the combination of a plurality of stair units consisting of a tread and riser, lugs formed at the lateral edges of the tread and riser of each unit, and stringers provided with slots, said lugs extending through the slots and bent against the walls of the stringers for fastening the units and stringers together.

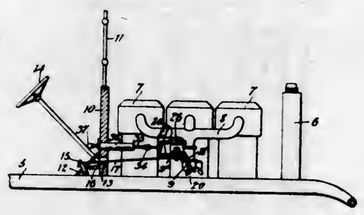
1,385,210. STARTING MEANS. CHARLES HAUNZ, Lancaster, N. Y., assignor to Gould Storage Battery Company, a Corporation of New York. Filed May 10, 1917. Serial No. 167,678. 20 Claims. (Cl. 123—179.)

5. Starting means comprehending an electrically operated gas generator producing an explosive mixture of gases, means for confining said gases under pressure, means operated responsive to said production of gas for igniting said confined gases, and means for utilizing the power developed thereby to perform a starting function.

1,385,211. ADVERTISING DEVICE. JOHN HULL, Coatesville, Pa. Filed Mar. 17, 1921. Serial No. 453,022. 5 Claims. (Cl. 211—8.)



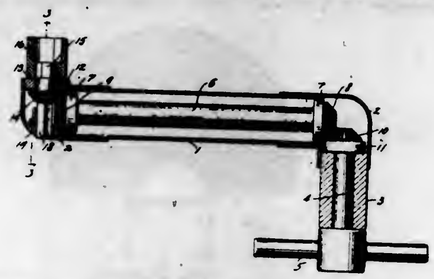
1. In a device for delivering cigars, the combination with a house-like structure having a porch with a doorway communicating therebetween, of a figure movably mounted to pass from within the house-like structure to a point upon the porch through said doorway and including a cigar receiving element, of means to simultaneously deliver cigars one at a time to said receiving member and to move the figure through the doorway onto the porch.



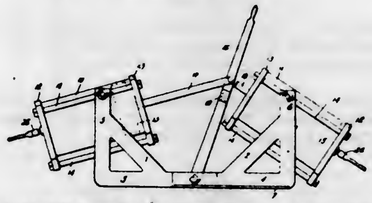
1,385,212. HOUSED IRONING-BOARD. CHARLES V. HUNTINGTON, Woodland, Calif. Filed June 13, 1919. Serial No. 303,933. 1 Claim. (Cl. 68—10.)

The combination with a wall having a housing formed therein, of an ironing board hingedly connected at one end to a transversely disposed cleat mounted on the back wall of said housing, a brace consisting of relatively foldable members which are hingedly connected together at their adjacent extremities, a transverse cleat mounted on the board at an intermediate point in its length and formed with a beveled edge constituting a stop for one of the

elements of the brace, the said element being hingedly attached to the board adjacent the cleat, a transversely disposed rest spanning the housing and having the other element of the brace hingedly connected to it, and a transversely disposed bar mounted in the housing adjacent the bottom thereof and having its outer edge beveled for abutting engagement with the opposite end of the first said element constituting the foldable brace.



1,385,213. AUXILIARY AIR-FEED. PAUL EMERSON KLINE, Bridgeville, Pa. Filed Sept. 15, 1919. Serial No. 323,748. 6 Claims. (Cl. 123—119.)



1. An auxiliary air feed comprising an air tube to be mounted upon an intake manifold for the purpose of producing air intake, said air tube being provided with a stop, a valve mounted within said air tube and movable relatively thereto for the purpose of controlling the amount of air drawn into said tube, a stem connected with said valve, a floating lever connected with said stem, a foot lever, mechanism from said foot lever to said floating lever for actuating said floating lever in order to control said valve, and mechanism controllable at the will of the operator for shifting the position of said floating lever.

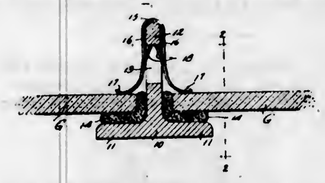
1,385,214. WRENCH. AUGUST CHARLES KLOPPER, Asbury Park, N. J. Filed Nov. 6, 1920. Serial No. 422,225. 2 Claims. (Cl. 81—57.)

1. A wrench of the character described, comprising a tubular casing, a shaft supported by the casing at one end thereof, a nut engaging socket on the shaft, a pinion on the inner end of said shaft having an angular socket therein, an angular locking block movable into and out of engagement with said socket and adapted when in engagement with the socket to lock the pinion against turning movement, means for operating the locking block, and means for imparting turning movement to the pinion.

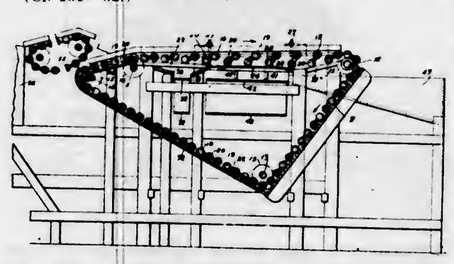
1,385,215. PUMPING MECHANISM. EDWARD S. LIDSTONE, Providence, R. I. Filed June 18, 1920. Serial No. 389,873. 10 Claims. (Cl. 230—27.)

1. A pumping mechanism comprising a sectional frame, a plurality of pumping devices on said frame, means for connecting and holding the frame sections in position suitable for the actuation of said devices, and means on said connecting means for actuating said devices.

9. A pumping mechanism comprising a sectional frame, a base portion and a supporting portion on each section, a pumping device mounted on each section, a connecting link between the base portions of separate sections to hold them in position for the operation of the devices, and an actuating member for said devices coöperating with said link, said base portions adapted to telescope one within the other when the sections are disconnected.



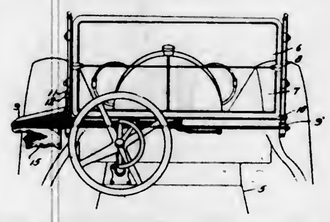
1,385,216. VISE. EDWARD S. LIDSTONE, Providence, R. I. Filed JAN. 18, 1921. Serial No. 438,154. 10 Claims. (Cl. 81—41.)



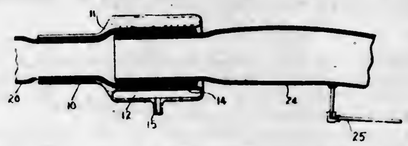
1. A device of the character stated including a supporting base, an annular member having rotary mounting on the base, said annular member including an internal annular flange, a plurality of vertically movable members frictionally engageable with the flange to hold the annular member against rotary movement.

1,385,217. GLAZING-CLIP. HENRY M. LUTZ, New York, N. Y. Filed Apr. 13, 1920. Serial No. 373,653. 3 Claims. (Cl. 189—77.)

1. A glass securing means comprising in combination with a T-shaped bar, the web of which is provided with cut-out portions, a U-shaped resilient clip, the free ends of the legs of which are flared outwardly to provide glass-engaging feet, and resilient tongues formed in the body portion of said U-shaped clip, the free ends of said tongues being adapted to engage within the cut-out portions of the web of the bar to maintain the feet in contact with the glass and the U-shaped clip in position upon the web of said bar.

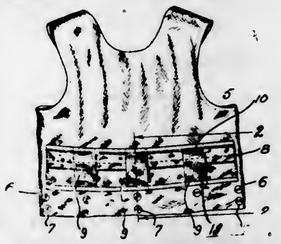


1,385,218. FRUIT-SIZING MACHINE. ALLEN H. MCINTYRE, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed Apr. 16, 1919. Serial No. 290,440. 23 Claims. (Cl. 130—32.)



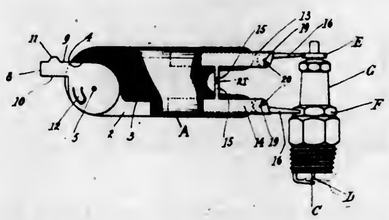
1. In a fruit sizing machine, in combination, a sizing conveyer, means to move the sizing conveyer in a substantially horizontal plane, said sizing conveyer comprising two laterally extending parallel spaced fruit supports, one of said supports being movable below, and out of and into the path of travel of the sizing conveyer and with relation to the other support.

1,385,219. DIRECTION-INDICATOR. MAURICE T. MCINTYRE, Brooklyn, N. Y. Filed Mar. 20, 1920, Serial No. 367,375. Renewed June 7, 1921. Serial No. 475,836. 1 Claim. (Cl. 116—47.)



A direction indicator comprising a stationary housing of substantially rectangular form rigidly secured to the forward portion of a motor vehicle, a shaft extending transversely of the vehicle and having one of its ends projecting into said housing, an indicating member carried by that end of said shaft which projects into the housing, said indicating member lying normally in a horizontal plane to close the lower open side of said housing, and means for rocking said shaft to swing the indicating member to vertical display position on the exterior of said housing.

1,385,220. TUBE-SPLICING. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1920. Serial No. 422,785. 7 Claims. (Cl. 18—59.)

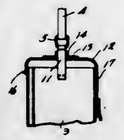


1. The method of splicing tubes comprising coating the inner surface of one section of tube and the outer surface of another section of tube with cement, holding that section having its inner surface coated distended without interfering with access to its inner surface, locating the second section within the first section, and bringing the cemented surfaces into contact.

1,385,221. CHILD'S WAIST. EDNA F. MEIER, Denver, Colo. Filed Sept. 16, 1918. Serial No. 254,275. 1 Claim. (Cl. 2—98.)

A child's nether-garment-supporting waist having a relatively narrow folded member set in the back of the waist with the fold extending transversely of the entire back of the waist, the edges of said folded member being secured to the waist, elastic means spanning said folded member and secured to the waist immediately above and below the folded member, said elastic means extending and being effective throughout substantially the entire transverse length of the folded member, and a series of fasteners on the garment below the folded member for the attachment of nether garments.

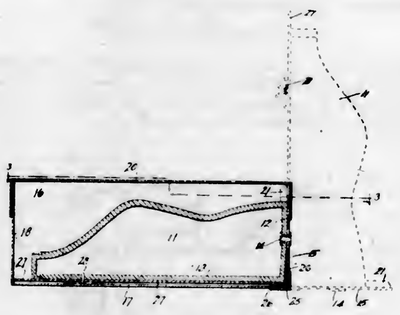
1,385,222. COMBINATION SPARK-PLUG-TESTING AND GAP-ADJUSTING DEVICE. JOSEPH C. MILLER, North St. Paul, Minn. Filed Jan. 16, 1920. Serial No. 351,751. 3 Claims. (Cl. 175—183.)



1. A testing device for ignition systems comprising a non-conducting comparatively thick long block, two spaced conducting members partly embedded in said block and extending longitudinally beyond the end thereof, said block being cut away to form an open space between the embedded parts of said conducting members, electrodes

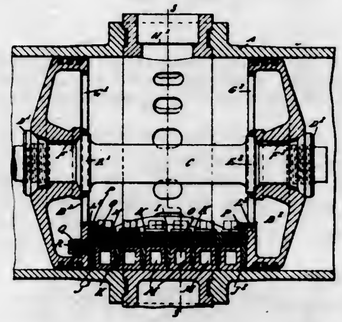
spaced end for end in said open space one connected with each of said conducting members, and a contact member for each conducting member pivoted at the free end of the latter so as to swing in the same plane toward each other, one of said conducting members extending beyond the other to permit one contact member to fold over the other.

1,385,223. ALLOY. FOSTER MILLIKEN, Lawrence, N. Y., assignor to Foster Milliken, S. Fullerton Weaver, and James M. Reppiier, as trustees. Filed May 24, 1920. Serial No. 383,888. 1 Claim. (Cl. 75—1.)



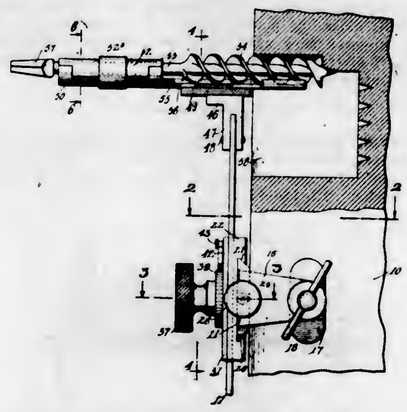
An alloy containing aluminum, lead, and an oxidizing agent, the aluminum and the lead being in a purified state and in proportion substantially as specified, the said oxidizing agent being a portion of 1 to 2 per cent. of the deoxidizing agent used as the medium for purifying the said aluminum and the said lead and remaining as an integral part of the alloy after purification of the said aluminum and lead, the said alloy being characterized by increased density, ability to withstand pressure and high resistance to corrosion.

1,385,224. COVER AND SUPPORT FOR CARRIERS. ROBERT P. ORR, Albany, N. Y. Filed Feb. 6, 1920. Serial No. 356,642. 3 Claims. (Cl. 224—5.)



3. A carrier of the character described comprising a body formed in two sections, flexible means for connecting the sections together, a cover for each of said sections and means extending through said covers for supporting said sections in such a manner that the cover may be opened and closed without disturbing the supporting means.

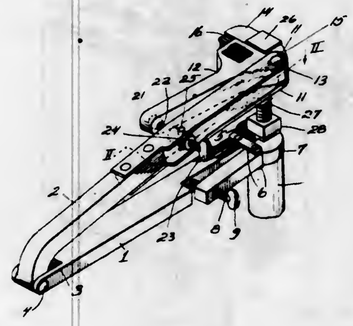
1,385,225. DISPLAY DEVICE. CHARLES I. OWEN, Yonkers, N. Y. Filed Dec. 11, 1919. Serial No. 344,051. 2 Claims. (Cl. 211—28.)



1. A display device, comprising a box having a front, a bottom, back, sides and top, a half form adapted to support a garment to be displayed and having a flat bottom and a flat back, means permanently fastening the said flat bottom of the half form to the rear face of the said box front, the latter forming a base for the said half form, a backplate hinged at its forward edge to the lower end of the said box front, the said backplate fitting into the box between the sides thereof and resting normally on the bottom of the box, the flat back of the half form resting on the said backplate, and tying means detachably fastening the said half form back to the said backplate.

1,385,226. PISTON OF UNIFLOW STEAM-ENGINES. HENRY PILLING, Chorlton-cum-Hardy, England. Filed Jan. 6, 1921. Serial No. 435,462. 6 Claims. (Cl. 74—108.)

1. A uniflow steam engine piston constructed in two parts, each part being separately secured to a piston rod common to each part and in which a chair or slipper arranged between the two parts of the piston supports the weight of the piston.

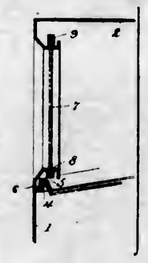


1,385,227. BIT AND DRILL GUIDE. FRANK PYRON, New York, N. Y. Filed May 14, 1920. Serial No. 381,361. 5 Claims. (Cl. 77—62.)

1. A device for drilling mortises in doors, which comprises a clamp to be attached to the door, a drill bit support attached to the clamp, means for moving the support in one direction relative to the clamp, and means for moving the support in another direction relative to the clamp.

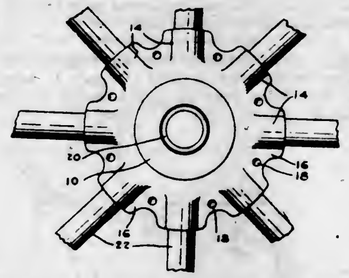
1,385,228. ADJUSTABLE TAPPET-WRENCH. ROY P. REYNOLDS, Harrisonville, Mo. Filed Nov. 29, 1920. Serial No. 427,147. 5 Claims. (Cl. 81—53.)

4. In a tool of the character described, a pair of handles bearing a pivoted relation to each other, one of said handles being provided at its outer end with an immovable jaw having a movable jaw pivoted thereto, and means for locking the movable jaw against outward movement; the



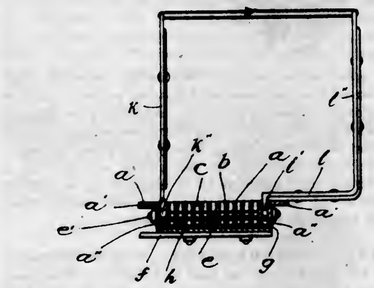
companion handle being provided with a wrench at its outer end, and means carried by said handle for operating said wrench.

1,385,229. PRODUCTION OF REFLECTING-SURFACES ON GLASS BY MEANS OF METALS IN THE PLATINUM GROUP. JULIUS RHEINBERG, London, England. Filed Oct. 11, 1920. Serial No. 416,314. 4 Claims. Cl. 91—70.1.)



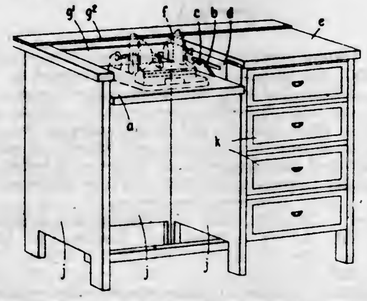
1. The production on glass of surface mirrors which are homogeneous and structureless, by first coating the glass with a dry film of collodion containing one of the platinum metals, and subsequently submitting the coated glass to the requisite temperature in a furnace.

1,385,230. DIRECTION-SIGNAL. JESSE G. ROSEBOOM, Cincinnati, Ohio. Filed Aug. 7, 1920. Serial No. 401,945. 4 Claims. (Cl. 40—132.)



1. In a hood for direction signals the combination of a lower section arranged in the upper wall of the cowl of a vehicle, a section superimposed on the first section, interlocking walls at the meeting line of the two sections to prevent passage of water to the casing formed by the sections, a transparent panel mounted in the front wall of the upper section, and signal means within the casing visible through transparent plate.

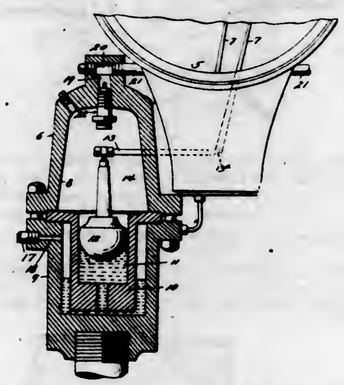
1,385,231. PROCESS OF MAKING HUBS. MAX SKOLNIK, Minneapolis, Minn. Filed Mar. 8, 1920. Serial No. 364,286. 2 Claims. (Cl. 29—174.)



1. The process of making hubs consisting in shaping complemental hub members so that when placed together socket portions and contacting portions occur alternately, then securing together said contacting portions, and shrinking said hub members upon a sleeve.

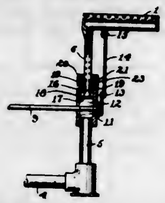
1,385,232. RUNNING-BOARD FOR MOTOR-VEHICLES. FREDERICK SMITH, London, Ontario, Canada. Filed Feb. 28, 1920. Serial No. 362,017. 2 Claims. (Cl. 286—169.)

1. A running board for motor vehicles comprising a grilled tread, a solid bottom below the tread, and spacing members interposed between the bottom and the under side of the tread.



1,385,233. DESK, TABLE, AND LIKE OFFICE FURNITURE. WILFRED STAFFORD, London, England, assignor of one-half to William Davies, London, England. Filed Nov. 23, 1920. Serial No. 426,029. 3 Claims. (Cl. 45—52.)

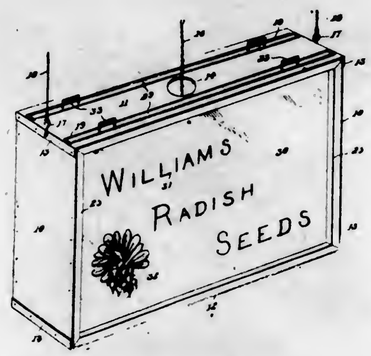
1. A desk comprising a rotatable top part, lugs secured to the said top part and having stud receiving holes formed therein in alinement and offset from one surface of the said top part, a top supporting part, slotted plates secured



to the said top supporting part, studs slidably carried in the slots in the said plates and extending into the holes in the said lugs to form pivotal supports therefor, springs urging the said studs toward the ends of the slots and battens carried by the top supporting part forming a slot to receive one edge of the top part.

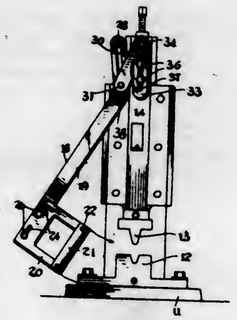
1,385,234. ATTACHMENT FOR DIFFERENTIAL AND STATIC PRESSURE GAGES. HENRY P. WESTCOTT, Erie, Pa. Filed June 24, 1919. Serial No. 306,397. 3 Claims. (Cl. 73—31.)

1. The combination with a differential pressure gage organization of the class specified having a float chamber and an inclosure chamber thereover, and movable support for the float above the latter, the chambers being provided with an inlet and outlet and a loosely operating normally open check valve mounted in the outlet and having a movable closure part adapted to be engaged by a portion of the support of the float to close the said outlet when the float is subjected to excessive pressure.



1,385,235. POULTRY-HOVER. AUGUST WESTMAN, Quincy, Ill., assignor of one-half to Edward A. Westman, St. Louis, Mo. Filed Nov. 6, 1920. Serial No. 422,162. 5 Claims. (Cl. 158—42.)

1. A heating apparatus for poultry hovers comprising a movable fuel burner, a fuel inlet pipe carried by the burner and provided with inlet ports, hollow means connecting the inlet pipe with a source of fuel supply and forming a valve chamber, and means engaging the fuel burner for moving the same as a unit whereby to adjust the position of the ports in the inlet pipe with respect to the chamber to regulate the flow of fuel to the burner.

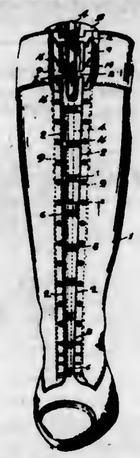


1,385,236. CHANGEABLE ILLUMINATED DISPLAY DEVICE. LYONS H. WILLIAMS, Norfolk, Va. Filed Mar. 9, 1920. Serial No. 364,452. 1 Claim. (Cl. 40—132.)

A device of the class described comprising a metal rectangular frame with top, bottom and ends, the top of the frame having a central opening adapted for the reception of a lamp therethrough, and with a longitudinal slot having inwardly projecting oppositely positioned marginal flanges adapted for the guiding reception of a sign when positioned within the frame, upright guide strips secured to the ends of the frame between the top and bottom thereof with the inner one of said flanges countersunk in the

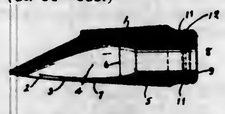
upper end portions of said strips and a rectangular stay closely fitted within the open side of the frame having a longitudinal groove in the upper rail of the stay snugly receiving the outer flange of the slot when the device is assembled with the outer face of the stay flush with the adjacent edges of the top, bottom and ends of the frame.

1,385,237. GUARD FOR PUNCHING-MACHINES. SAMUEL BAKER WOODWARD, Trenton, N. J. Filed May 17, 1921. Serial No. 470,393. 6 Claims. (Cl. 74—105.)



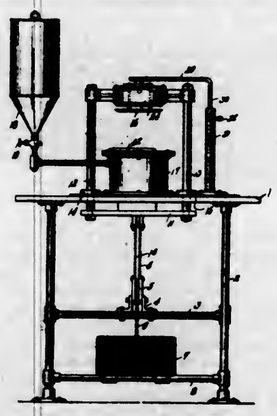
1. A guard for punching machines comprising an arm having its rear portion formed with a diagonally extending branch having a longitudinal slot, a link having a pivot bolt adjustable in said slot, a pivot element engaged with said arm in advance of said slot, an attaching plate having a longitudinal slot, attaching bolts extending through said second named longitudinal slot and securing the attaching plate in position for vertical adjustment for varying the throw of said arm, a pivot pin connecting one end of said link to said attaching plate, and a sweeper adjustably connected to said arm.

1,385,238. SHOE-LACING DEVICE. JOHN H. ANTHON, San Francisco, Calif. Filed Mar. 19, 1921. Serial No. 453,856. 6 Claims. (Cl. 24—205.)



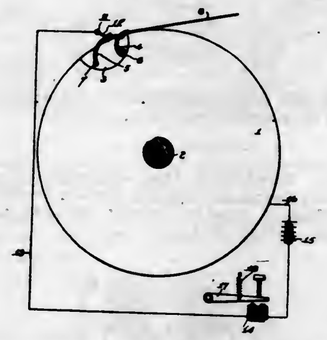
3. The combination with a shoe of a pair of substantially parallel members slidably mounted within the stays of said shoe and detachably and adjustably connected to each other, each member having slots therein oppositely inclined to the slots of the opposite members each of said slots having offset locking portions; pins mounted within said stays and projecting through slots in their respective

members; and means for moving said members to cause the inclined slots therein to move said pins toward each



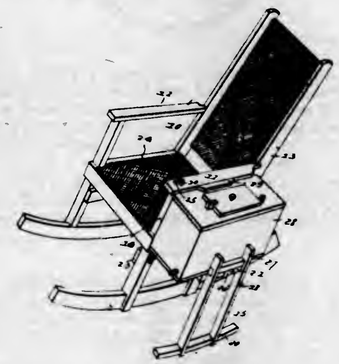
other and into the offset locking portions of the slots to fasten said stays.

1,385,239. MOUTHPIECE FOR WIND MUSICAL INSTRUMENTS. MARVIN H. BABBITT and JESSE BABBITT, Elkhart, Ind. Filed Dec. 11, 1919. Serial No. 344,196. 6 Claims. (Cl. 84—383.)



1. A mouthpiece for wind musical instruments of the class described comprising a tubular body provided with a lateral orifice adjacent one end thereof and a bore at the opposite end thereof; and a separate tubular bushing arranged within said body bore, the forward end of said bushing terminating between the inner end of said lateral orifice and the outer end of said body bore.

1,385,240. MACHINE FOR MAKING HAT-LINING TIPS. RUBIN BELL, New York, N. Y. Filed July 12, 1920. Serial No. 395,633. 8 Claims. (Cl. 154—1.)

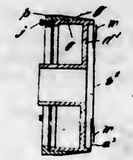


2. A device of the character described comprising a presser head, a die for pressing a hat lining tip thereon, means for moistening said tip as it is being pressed, and means for ejecting or removing the tip from the die after the pressing operation.

1,385,241. AUTOMATIC TRIP-MOTION. MAURICE BERNAUDIN, New York, N. Y. Filed Mar. 3, 1921. Serial No. 449,557. 4 Claims. (Cl. 101—233.)

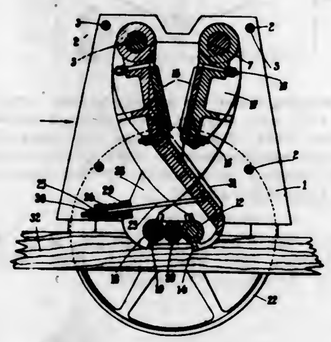
1. A tripping device for printing presses, which comprises a roll, paper gripping means disposed thereon, paper ejecting means disposed thereon, and means attached to the paper ejecting means to make metallic contact between the gripping means and the ejecting means when a sheet of paper is not gripped.

1,385,242. CHAIR-OPERATED CHURN. MOSES W. CARDEN, Opelika, Ala. Filed Dec. 9, 1919. Serial No. 343,591. 3 Claims. (Cl. 155—69.)



1. A rocking chair having an auxiliary rocker supported extension mounted for sliding movement thereon and provided with a table or rest for a churn body, said rocker element being provided at its outer end with means for preventing outward displacement of a churn body with reference to the rest, and a movable locking element mounted upon the chair for overlapping engagement with a churn body arranged upon said seat for holding the latter in position thereon.

1,385,243. DIAPHRAGM FOR GRAMOPHONES, PHONOGRAPHS, TELEPHONES, AND THE LIKE. ARTHUR THOMAS COLLIER, St. Albans, England. Filed Sept. 26, 1919. Serial No. 326,622. 3 Claims. (Cl. 181—32.)



1. A sound recording or reproducing diaphragm comprising a flat apertured outer part of a supple material

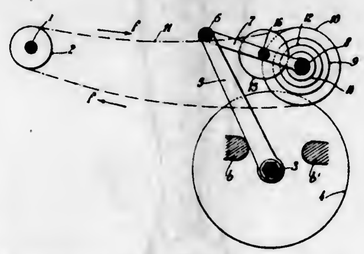
which is sonorous when stretched, and a flat inner part of a more rigid material closing the aperture in the first-

mentioned part and having its outer margin firmly connected to the margin around the said aperture.

1,385,244. VIBRATORY-JAW CRUSHER. CHARLES MARKHAM CONDER and GODFREY TWYNAM VIVIAN, Camborne, England. Filed Jan. 26, 1921. Serial No. 440,227. 3 Claims. (Cl. 83—53.)

1. A crushing machine comprising a frame, crushing jaws pivotally mounted in said frame, rollers carried one by each of said jaws, a cam engaging said rollers so as to spread said jaws apart at intervals, said rollers being so constructed that one roller bears against one portion of the cam on the rotation thereof, while a second roller bears against a portion of the cam which is not brought into engagement with the first roller, means for rotating said cam, and means for drawing the crushing jaws together.

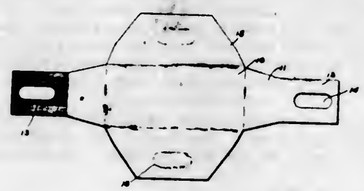
1,385,245. COMPOSITION FOR DETONATORS. RUSSELL M. COOK and BENNETT GROTTA, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 31, 1921. Serial No. 457,500. 4 Claims. (Cl. 52—4.)



1. A blasting cap charge comprising a mixture of lead azid and trinitrophenylmethylnitroamin.

1,385,246. FOOD PRODUCT AND PROCESS OF PREPARING SAME. RALPH W. CROCKER, Chicago, Ill. Filed May 26, 1919. Serial No. 299,897. 5 Claims. (Cl. 99—11.)

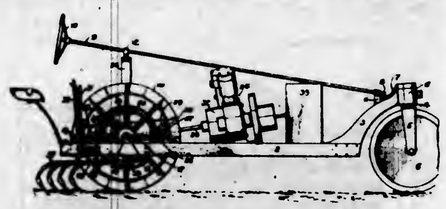
2. A method of preparing and preserving food for market, comprising thoroughly beating eggs with milk, arranging a solid food ingredient on a support; pouring some of the egg and milk mixture upon said solid food and its support, thereby inclosing the solid food; and causing the mixture thus poured to become colloidal and thus to fix the relative positions of parts of the solid ingredient; and sealing and sterilizing the whole in cans.



5. A new article of manufacture consisting of a hermetically sealed can of colloidal egg and milk food containing a small quantity of the product resulting from the dissemination, prior to the colloidal formation, of a relatively very small quantity of flour disseminated throughout its mass.

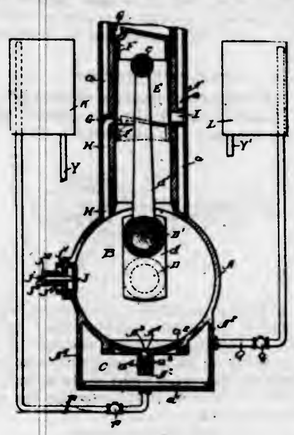
1,385,247. MECHANICAL TRANSMISSION. DÉSIRÉ PIERRE DEMARNE, Issy-les-Moulineaux, France. Filed May 14, 1917. Serial No. 168,535. 1 Claim. (Cl. 74—21.)

The combination with a driving shaft, of a main driven shaft and an intermediate driven shaft, a pulley on the driving shaft and a pulley on the intermediate shaft, a flexible transmission member extending between the same, a toothed wheel secured to the main driven shaft, a connecting rod loosely mounted on the main driven shaft, a second connecting rod pivoted to the end of the first mentioned connecting rod and carrying the intermediate driven shaft at its free end, a gear mounted on the intermediate driven shaft and adapted to mesh with the toothed wheel on the main driven shaft, and a reversing gear carried by the second connecting rod.



1,385,248. ENVELOP. JERROLD PARRILL DE VAUGHN, Buffalo, N. Y. Filed May 22, 1919. Serial No. 298,998. 4 Claims. (Cl. 229—73.)

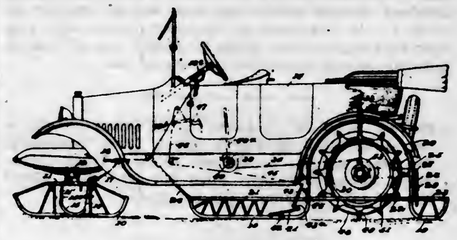
1. An envelop comprising a body having overlapped flaps having registering openings when so overlapped, and a closing flap attached to said body and adapted to be inserted underneath said first flaps, said closing flap presenting a surface for an address, said first-mentioned flaps being arranged to render said address-surface of said closing flap visible when said closing flap is in position underneath said registering openings.



1,385,249. TRACTOR. STANLEY R. DU BRIE, Detroit, Mich., assignor to Edward H. Kramer, Detroit, Mich. Filed Nov. 4, 1918, Serial No. 261,092. Renewed Dec. 1, 1920. Serial No. 427,658. 2 Claims. (Cl. 180—25.)

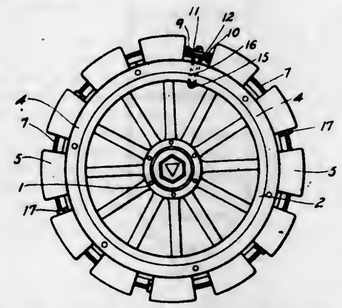
1. A tractor comprising a main frame, and upwardly and forwardly extending head piece carried by said frame, a steering wheel having a turning post in the forward end thereof, a sector gear carried by the post of said steering wheel, a traction wheel at the rear end of said frame and alining with said steering wheel, and supporting said frame below the axis of said wheel, a power plant intermediate said wheels and in alinement therewith, a reduction gearing intermediate said traction wheel and said power plant and adapted for transmitting power to said traction wheel, a side yoke carried by said frame, a third wheel entirely outside of said yoke and supporting said

yoke, a bracket carried by said yoke, a bearing on said head piece in alinement with said bracket, a steering shaft journaled in said bearing and said bracket, and a beveled gear wheel on said shaft and meshing with said sector gear adapted for turning the post of said steering wheel.



1,385,250. TWO-CYCLE ENGINE. WALDO G. GERNANDT, South Bend, Ind., assignor to Gernandt Motor Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1920. Serial No. 399,745. 3 Claims. (Cl. 123—196.)

1. In a two cycle engine which is provided with a fuel tank and a lubricating oil tank, the combination of a crank case chamber, a chamber positioned below said crank case chamber, a passage way between said chambers, means to obstruct communication in said passage way between said last chamber and said first chamber, and to yieldingly obstruct communication from said first chamber and said last chamber, a passage way arranged to convey lubricating oil and pressure from said last chamber to said lubricating oil tank, and an additional passage way arranged to convey gases and pressure from said last chamber to said fuel tank.



1,385,251. MOTOR-VEHICLE SLEIGH. WILLIAM B. JENKINS, Barber, Idaho. Filed Aug. 7, 1919. Serial No. 315,882. 4 Claims. (Cl. 180—6.)

1. The combination with a motor vehicle, of a front sleigh truck operatively connected with the front spindles of the vehicle, a rear sleigh truck, means connecting the forward end of the rear truck with the vehicle, means connecting the rear end of said rear truck with the rear end of the vehicle and holding the rear end of the vehicle against forward and rearward movement as well as transverse movement with respect to the rear truck but permitting vertical movement of the rear end portion of the vehicle with respect to the rear truck, and flexible suspen-

sion means supporting the rear end portion of the vehicle to hang from the rear truck.

1,385,252. TIRE. WINDOM L. KEMPER, Topeka, Kans. Filed July 12, 1920. Serial No. 395,617. 4 Claims. (Cl. 152—23.)

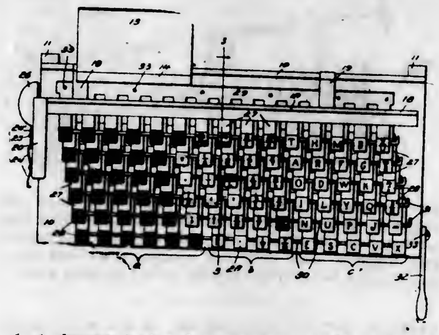
1. A tire comprising a plurality of rubber blocks, flexible connections between the blocks, means for securing the flexible connections to the blocks comprising transverse rods around which the flexible connections engage, and means for securing the tire to the wheel, said means having a portion to engage the tire stem opening in the wheel rim.

1,385,253. GAS-METER. ERNEST A. KERSTEIN, Union, N. J., assignor to American Meter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1919. Serial No. 279,508. 3 Claims. (Cl. 73—1.)

1. In a meter having bellows embodying a flexible diaphragm and a metal disk attached thereto and pre-

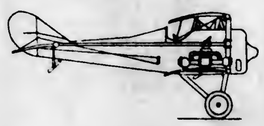
seating a flat face, and gearage for operating the registering mechanism, means for attaching such gearage to said disk comprising gearage posts, and a base plate having openings through which said posts extend and are secured to the base plate at the rear thereof, said base plate having an edge which is turned toward and is soldered edgewise to the flat face of said disk.

1,385,254. SILO OR FILLING-TRUNK FOR POWDERED OR GRANULAR MATTER. KARL LÜFT, Darmstadt, Germany, assignor to the firm RÖHM & HAAS, Darmstadt, Hessia, Germany. Filed Nov. 11, 1920. Serial No. 423,458. 2 Claims. (Cl. 83—52.)



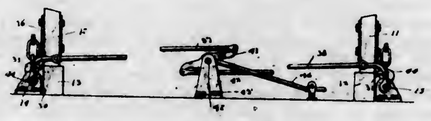
1. An apparatus of the character described, comprising a trunk open at the top and having a discharge at the bottom, and a plurality of angularly arranged bars in the trunk for breaking up the material, the bars being disposed irregularly and in spaced relation to one another and to the sides of the trunk so that the material will not be supported thereon, the spaces provided by the bars, through which the material passes, being angular.

1,385,255. COWL-VENTILATOR FOR MOTOR-VEHICLES. FRED L. LUNT and PAUL F. HATCH, Amesbury, Mass., assignors to Amesbury Seat Manufacturing Company, Amesbury, Mass., a Copartnership composed of W. E. Bassett, Fred L. Lunt, and Paul F. Hatch. Filed Nov. 26, 1920. Serial No. 426,431. 1 Claim. (Cl. 180—69.)



In a cowl ventilator for motor vehicles, a cowl having a ventilator opening in the top thereof, a lining for said opening having an inward trough extension provided with a water outlet, a cover fitting in said opening and having its top surface flush with the top surface of the cowl and provided with a rubber insert extending peripherally around its bottom and resting upon the free edge of said trough extension.

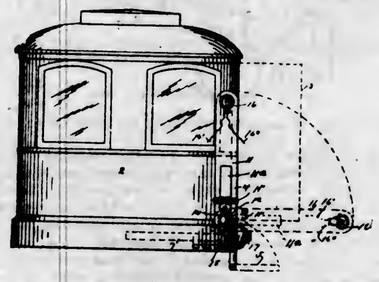
1,385,256. DUMMY KEYBOARD. JOSEPH W. MCCANN, Washington, D. C., assignor, by direct and mesne assignments, of one-half to Joseph H. McCann and one-half to George P. Kimmel, Washington, D. C. Filed Feb. 23, 1921. Serial No. 447,050. 13 Claims. (Cl. 35—16.)



1. A dummy keyboard comprising a body having an upper surface arranged to form an inclined plane, rows of keys resiliently pivoted directly to the inclined plane of said body, and a unitary member constituting a resilient means associated with each row of said keys for limiting their pivotal movement and to facilitate the action thereof.

1,385,257. GENERATOR. DONALD W. MCLEAN, Glencoe, Ontario, Canada. Filed Oct. 12, 1920. Serial No. 416,484. 9 Claims. (Cl. 244—18.)

1. In a generator a cylinder, a pair of pistons one operating within the other, a water space between the pistons, one of the pistons being designed to compress vaporized gasolene to an ignition point, and the second piston to deliver compressed water to the burning gasolene to absorb the heat therefrom and vaporize the water substantially as described.

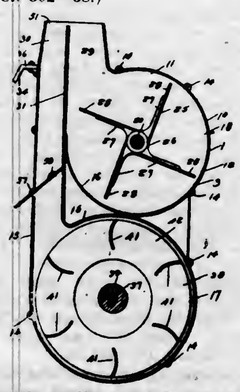


1,385,258. LIFEBOAT-SUPPORTING APPARATUS. DONALD MACBETH, Montreal, Quebec, Canada. Filed Dec. 26, 1919. Serial No. 347,418. 1 Claim. (Cl. 9—22.)

Life boat supporting apparatus, comprising spaced transverse bars having flat upper surfaces, bearings arranged in proximity to the outer faces of each of said bars in parallel relation thereto, shafts mounted in said bearings, spaced substantially right angular arms fixed to said shafts, saddles carried by the free portion of said arms adapted, at times, to rest on the flat upper surfaces of the bars, keel supporting members fixedly supported on said shafts having flat bracket portions on their free ends formed on certain of the sides thereof with upstanding flanges adapted for engagement with the boat keel to prevent lateral shifting of the same on the cradles, anchoring means engageable with the gunwales of the boat,

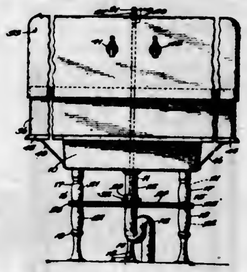
means on said shafts for connecting the same to the anchoring means, and a common means for collectively operating said cradles, keel supporting members and anchoring engaging means.

1,385,259. SAFETY APPLIANCE FOR STREET-CARS. FRANK D. MACDONALD, Syracuse, N. Y. Filed Oct. 23, 1919. Serial No. 332,767. 4 Claims. (Cl. 105—341.)



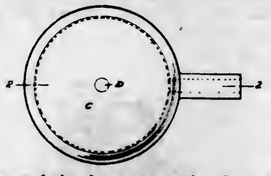
1. In a safety device for street cars, the combination with the door opening and closing mechanism, of a guard mounted on the rear-end of the car, a shaft pivotally supporting said guard, a pinion on said shaft, and a segment gear driving said shaft, said gear rigidly mounted on a rotating member of the door opening and closing mechanism.

1,385,260. SUPPORT FOR AIR-PUMPS OF BICYCLES AND LIKE VEHICLES. ALESSANDRO MOSCA, Turin, Italy. Filed Dec. 10, 1920. Serial No. 429,794. 4 Claims. (Cl. 208—45.)



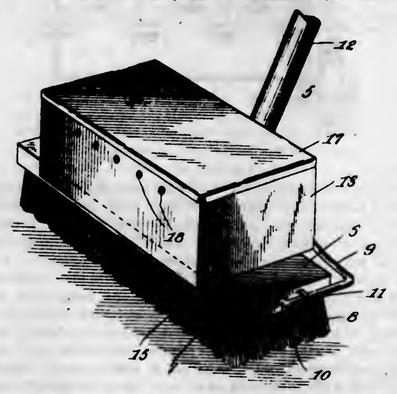
1. A device for carrying the air pump for tires of bicycles and other vehicles, comprising a fixed center and a movable bolt between which the pump is placed in position, characterized in this that the fixing bolt is placed under the control of a lock, and can be opened only by means of a key which is suitable for operating the locking mechanism.

1,385,261. BLOWER. JOHN WILLIAM MUNTZ, Holgate, Ohio. Filed July 29, 1919. Serial No. 314,120. 3 Claims. (Cl. 302—38.)



1. A pneumatic appliance of the character specified comprising a fan blower, a conduit in communication with the fan blower and having a lateral opening, and a valve pivoted at one side of the conduit in line with the opening thereof and extending across the conduit at a relatively upwardly and forwardly inclination.

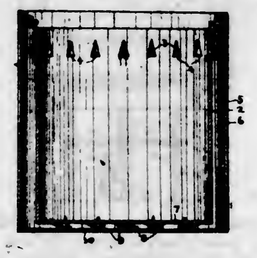
1,385,262. ADJUSTABLE SINK. KURT NEBEL, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,768. 4 Claims. (Cl. 4—36.)



1. The combination with a sink or the like, of a splash board hung from a wall adjacent the sink, a supporting device for the sink comprising a geared rotatable adjusting member, a pinion held in mesh with the gear of said member, and a pinion rotating shaft extending to a point above said splash board and having its upper end formed for engagement by a wrench.

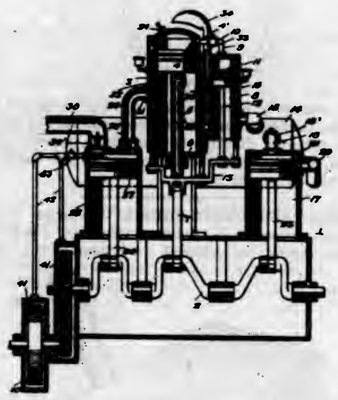
1,385,263. BURNER FOR PETROL AIR-GAS. GEORGE HORATIO NELSON and HUBERT ELWELL SMITH, London, England. Filed Mar. 19, 1921. Serial No. 453,852. 4 Claims. (Cl. 158—112.)

1. A burner of circular cross section for petrol air gas, an outlet therefrom, layers of wire gauze filling said outlet and so arranged that the flow of gas is substantially parallel to the planes of the layers, which are radial to the cross section of the burner.



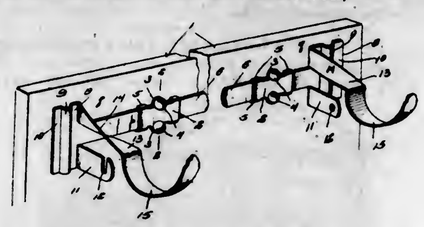
1,385,264. SCRUBBING-BRUSH. CHARLES FREDERICK OLIVIER, Sherbrooke, Quebec, Canada. Filed Dec. 9, 1920. Serial No. 429,444. 2 Claims. (Cl. 15—51.)

1. In a device of the character described, the combination of a brush and a container, a handle for said brush,



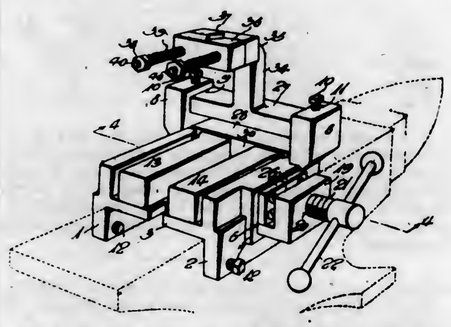
the bottom of said container being punched upwardly forming sharpened projections within said container, constituting a soap shaving means, said container projecting beyond the forward edge of the brush and having a series of openings in advance of the brush, and a cover for said container.

1,385,265. COOKING UTENSIL. CARL OLSON, Foster City, Mich. Filed Sept. 20, 1920. Serial No. 411,451. 2 Claims. (Cl. 53—1.)



2. The combination of an outer and an inner kettle, said inner vessel having its sides and bottom spaced apart from the sides and bottom of said outer vessel, and a series of laterally projected and downwardly directed openings near the top and downwardly and angularly directed openings in the bottom of said inner vessel.

1,385,266. ENGINE. ELIAS HARRY PALMER, Charleston, S. C. Filed Mar. 19, 1920. Serial No. 367,278. 1 Claim. (Cl. 60—32.)



An engine of the class described comprising a cylinder having both ends closed, a piston in said cylinder having its rod passing through the lower end thereof, a crank rod connected with the piston rod, a feeding cylinder connected with said cylinder, a storage tank connected with the feeding cylinder, a compressor cylinder connected with the tank, a carbureter to which the compressor cylinder is connected, pistons in said compressor cylinder and feeding cylinder, means for connecting said pistons with the crank shaft, a vacuum cylinder connected with said first mentioned cylinder, a piston in said vacuum cylinder connected with the crank shaft and valves for controlling the passage of fluid through the cylinders.

1,385,267. CURTAIN AND SHADE HOLDER. MARTIN PANSNER, Schenectady, N. Y. Filed Nov. 15, 1920. Serial No. 424,235. 2 Claims. (Cl. 156—24.)

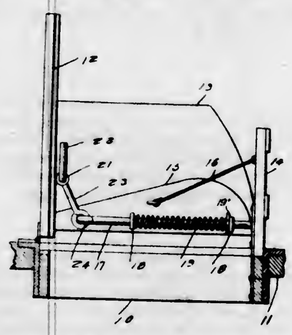
2. A fixture for window casings, including a fixed section comprising a plate centrally formed on its edges with outwardly extending ears, screws passing through the ears and entering the trim of the window casing, inwardly extended guides on the edges of the plate at the corners thereof, the movable section including an arm which is received through the guides of the fixed section and which has its edges in contacting engagement with the securing screws of the fixed section, said movable section having its outer end formed with a lateral extension providing a head, said head being channeled from its inner face to provide an outer bead and a spring rib extending from said bead and in contacting engagement with the trim of the window casing, an outwardly extending right angularly disposed bracket formed on the inner and lower edge of the head, a twisted extension on the upper and inner edge of the head, and said extension terminating in a hook.

1,385,268. ANVIL-VISE. ANTON C. PAULSON, Fargo, N. D. Filed Dec. 20, 1920. Serial No. 431,979. 11 Claims. (Cl. 81—26.)

2. An anvil vise comprising a body having side walls and a connecting web intermediate the height of the side walls for resting upon the upper face of an anvil with the lower portions of the side walls engaging the sides of the anvil, the side walls having oppositely disposed openings intermediate the length of the body, and the web having a transversely extending slot extending from the opening of one wall to a point adjacent the second wall, a carriage bar slidably mounted in the slot and extending through the openings, a jaw rigid with the bar between the side walls, a separate jaw between the side walls resting upon the web and bar, and an actuating screw having threaded engagement with the bar and swiveled connection with the separate jaw.

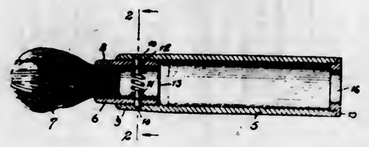
1,385,269. CONSTRUCTION OF THE PERMANENT WAY FOR RAILWAY-CARRIAGES OF LARGE CAPACITY. GUSTAVE PERRIER and GUSTAVE JOLIVET, Paris, France. Filed Mar. 14, 1919. Serial No. 282,688. 9 Claims. (Cl. 238—7.)

1. A compound railway rail, comprising web side portions having base portions and top flanged portions, means securing said web portions together, a removable tread having side flange portions adapted to be seated on the top



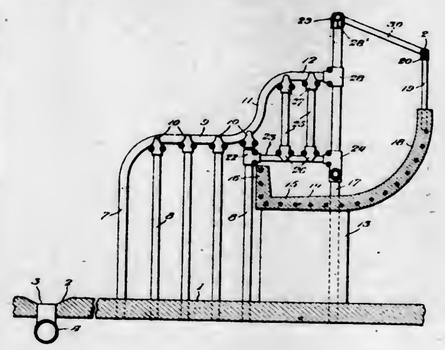
flanges of said web portions and means for fastening said tread flanges to said top web flanges.

1,385,270. MEASURING DEVICE. HOLGER S. PETERSEN, Brooklyn, N. Y. Filed Aug. 8, 1918, Serial No. 248,925. Renewed June 15, 1921. Serial No. 477,866. 2 Claims. (Cl. 73—120.)



2. A liquid measuring device comprising a plug having an opening therethrough, a transparent tube secured to the plug in axial alinement with said opening and having an open-tapered free end adapted for extending into the liquid to be measured, a stem slidably positioned through said opening extending outwardly of the plug, and a valve upon the inner end of said stem adapted for closing said opening when the stem is retracted.

1,385,271. TRAP-DOOR GUARD. CHARLES PETERSON, Leal, N. D. Filed Dec. 10, 1919. Serial No. 343,799. 5 Claims. (Cl. 94—38.)

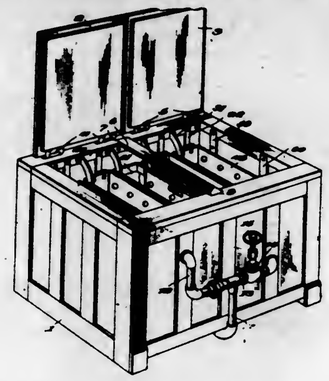


3. The combination with a structure having an opening formed therein and a closure door hingedly mounted at one side of the opening, of a guard hingedly mounted at the opposite side of the opening, a rigid guard carried by said door and extending for engagement with the hingedly mounted guard, a latch carried by the rigid guard for engaging the hingedly mounted guard when the door and guard are in a raised position, and means for moving said latch to an inoperative position.

1,385,272. BRUSH. SIMEON DESMOND PURDY, Fairville, New Brunswick, Canada, assignor of one-half to T. S. Simms & Company, Limited, Fairville, New Brunswick, Canada, a Corporation of Canada. Filed Jan. 7, 1921. Serial No. 435,717. 7 Claims. (Cl. 15—38.)

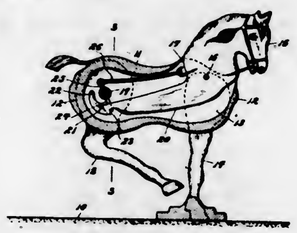
1. In a brush of the type described, a tubular casing having an arcuate notch formed in the inner face of its wall, a brush-carrying ferrule slidable within said casing, and a latching element carried by the ferrule and spring pressed outward to engage said notch and thus to hold the ferrule in brush-exposing position.

1,385,273. STALL. JAMES K. PUTT, Hershey, Pa. Filed June 22, 1920. Serial No. 390,844. 2 Claims. (Cl. 119—27.)



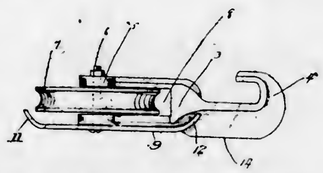
1. In a stall construction for stables, a reinforcing concrete floor, spaced reinforcing concrete standards arising therefrom at the front of the stalls, a reinforcing concrete trough resting on the upper edges of said standards, said trough having an upstanding rear portion and its front rounded upwardly from the standards, members embedded in the floor, and one of said members passing through the trough and standards for reinforcing the latter and for providing the stable with stalls.

1,385,274. ICE-BOX. JOSEPH MILES RHODES, Halls, Tenn. Filed May 3, 1920. Serial No. 378,500. 7 Claims. (Cl. 217—7.)



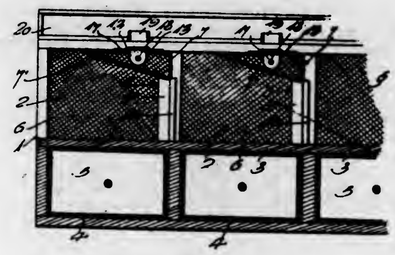
1. In an ice box, a chest having an open upper end, closure means for the open end of the chest, sectional bottom units removable from the chest, sectional guide means respectively connected to said bottom sections,

means for detachably connecting said guide means at the upper end of the chest, and supports for articles remov-



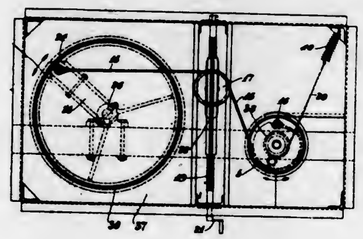
ably held between said guide means and independent of the same, substantially as described.

1,385,275. TOY. JAMES E. ROGERS, Cleveland, Ohio, assignor of one-half to George E. Black, Cleveland, Ohio. Filed Aug. 27, 1920. Serial No. 406,277. 2 Claims. (Cl. 46—40.)



1. A toy comprising a body, an actuating member mounted to swing on the body, a spindle journaled on the body, a movable member carried by the spindle, a stirrup projecting from the spindle, an extension actuating member, a trigger formed on the extension to engage with the stirrup, a guide on the extension for guiding the stirrup relative to the trigger and a tension member connecting with the actuating member and said spindle.

1,385,276. PULLEY. J FRASER ROSE, Trenton, Nova Scotia, Canada. Filed Aug. 9, 1920. Serial No. 402,476. 2 Claims. (Cl. 254—197.)

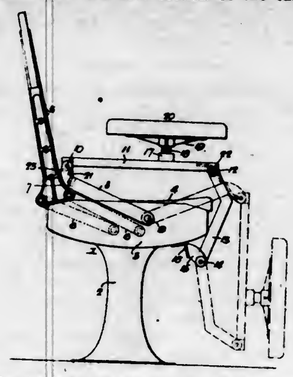


1. A pulley block consisting of a body member, an outwardly extending hook-shaped member, said hook-shaped member being provided with a ridge, the opposite end of said body portion being bifurcated, annular openings formed in the ends of said bifurcated end, a bolt passing through said openings, a pulley wheel mounted on said bolt, a shield independent of said body member and fitted to the under side of said bifurcated end and being held thereto by said bolt, one end of said shield being bent upwardly of the outer side of said wheel and the other side being slotted and bent upwardly of said hooked portion.

1,385,277. CHAT-SEPARATOR FOR CONCENTRATING-JIGS. ALFRED H. RUDGE, Newark, N. J. Filed Nov. 5, 1920. Serial No. 422,033. 2 Claims. (Cl. 83—58.)

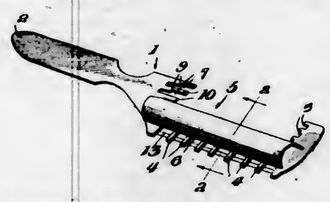
1. A separator comprising a housing having an outlet intermediate its height, and a hollow arm extending from the housing and communicating with the interior thereof, the arm and housing each having an inner wall terminating intermediate the level of the outlet, and the level of the lower edge of its outer wall.

1,385,278. MACHINE FOR BENDING METAL BARS AND THE LIKE. KARL GUSTAV MAGNUS RUNBÄCK, Stockholm, Sweden. Filed Jan. 5, 1920. Serial No. 349,485. 5 Claims. (Cl. 153—46.)



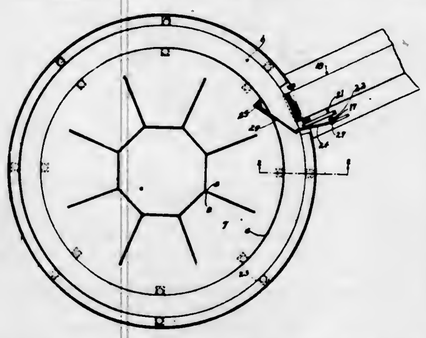
1. In a machine for bending metal bars and the like, the combination of two stationary supports for the bar, a third rotatable support for said bar, a rotatable disk supporting said third support, a rope secured to and wound around said disk, a rotary crank to which said rope is attached, and driving means for said crank.

1,385,279. CAR-SEAT. BERNARD SCHECHTER, St. Louis, Mo., assignor to American Car Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 24, 1921. Serial No. 447,501. 3 Claims. (Cl. 155—10.)



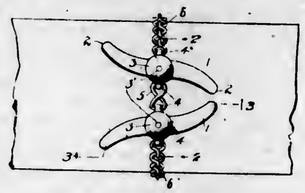
1. The combination of a car seat having a movable back arranged to be shifted to either side of the seat structure; a seat carrying frame; links connecting the seat structure to the frame independently of the back,

said carrying frame being arranged to be moved into position, either above the seat section of the car seat, or



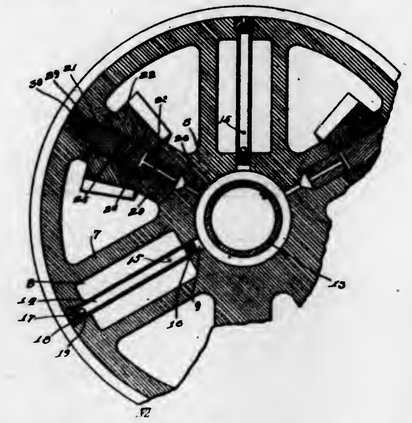
to one side thereof; and a motorman's seat carried by the seat frame.

1,385,280. RAZOR. GEORGE S. SIEBEN, Oak Bluffs, Mass., assignor of one-half to Coleman A. Church, Oak Bluffs, Mass. Filed Sept. 3, 1920. Serial No. 407,845. 4 Claims. (Cl. 30—12.)



1. In a combined hair cutter and safety razor, a frame having a handle and a comb, said frame being cut away above the comb, opposed notches forming fingers in the cut away portion of the frame, and a resilient holder and blade adapted to be retained by any of the opposed fingers.

1,385,281. CONVEYER. WILMONT C. SMILEY, Wampum, Pa. Filed Dec. 10, 1919. Serial No. 343,807. 3 Claims. (Cl. 193—1.)



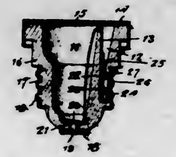
1. The combination with stalls arranged in a circle, an annulus having its periphery contiguous to the stalls, a conveyer having its loading portion adjacent to the annulus, a deflector pivoted adjacent one margin of the annulus at an inclination to its radius and into proximity to the conveyer, means to rotate the annulus, and means to simultaneously oscillate the deflector.

1,385,282. ANTISKIDDING DEVICE. WILMONT C. SMILEY, Wampum, Pa. Filed Sept. 11, 1920. Serial No. 409,703. 6 Claims. (Cl. 152—14.)

2. An anti-skidding attachment for vehicle tires, comprising two longitudinally and transversely curved bars, each of the longitudinal marginal edges of said bars being reversely curved, a link connecting said bars intermediate their ends, and a projection carried by each bar intermediate its ends.

1,385,283. LUBRICATOR. EDWIN B. SMITH and ALBERT H. LOUCKS, Marion, Ind., assignors to The Marion Machine, Foundry and Supply Company, Marion, Ind., a Corporation. Filed Nov. 5, 1920. Serial No. 422,061. 6 Claims. (Cl. 74—34.)

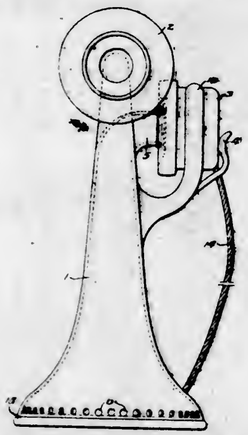
1. In a reversible clutch, a wheel, said wheel having hollow spokes, a hub, said hub having an oil passageway formed therein, a bushing positioned in the hub and forming one wall of the oil passageway, said bushing having openings, gear wheels supporter by the first mentioned wheel, means within the hollow spokes for forcing fluid into the oil passageway, and means to provide communication between the oil passageway and gear wheels to lubricate the same.



1,385,284. COATING FOR FLONGS. OTTO STRUENSEE, Philadelphia, Pa. Filed Sept. 22, 1920. Serial No. 412,021. 8 Claims. (Cl. 22—189.)

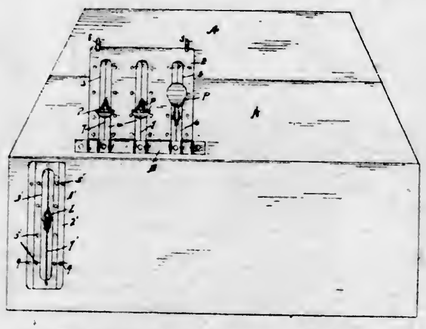
4. A coating for stereotype matrices containing talc; corn flour; and an adhesive material.

1,385,285. FUSE-PLUG. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 23, 1920. Serial No. 368,062. 5 Claims. (Cl. 200—130.)



1. A fuse plug comprising an insulating body having a fuse chamber and a well opening therefrom to the ex-

terior of the body, a screw shell side contact closing the exterior opening of said well, a fuse extending into said

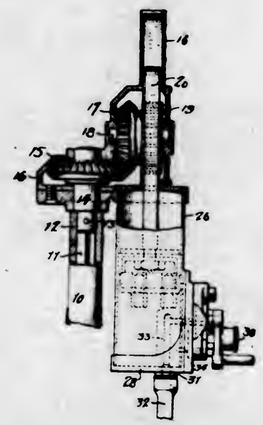


well, and spring means for effecting the electrical connection between said fuse and screw shell.

1,385,286. TELEPHONE. JOHN S. TIMMONS, New York, N. Y. Filed Mar. 25, 1919. Serial No. 284,929. 7 Claims. (Cl. 179—147.)

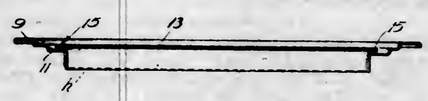
1. The combination in a telephone instrument of a hollow substantially conical supporting structure having an inlet opening for its small end; a transmitter mounted on said structure; and a receiver removably carried by the structure with its diaphragm normally in a position immediately adjacent the inlet opening to the interior thereof.

1,385,287. FOOTBOARD WEATHER-GUARD. JOSEPH R. VALENTINE and FREDERICK W. AKKIRE, Salt Lake City, Utah. Filed Oct. 4, 1920. Serial No. 414,454. 1 Claim. (Cl. 74—81.)



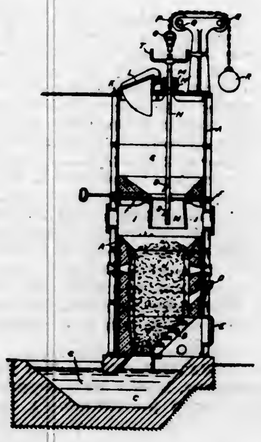
A weather guard for foot boards comprising two flat plates each having open slots therein, a thin strip of rubber secured in place between said plates having slits cut therein parallel with the slots in said plates; thumb buttons to hold one edge of said plates, and a flat bar recessed to receive the opposite edge of said plates and secured to the foot board.

1,385,288. TOOTHPICK-HOLDER. GEORGE W. WALKER, Oakland, Calif. Filed Aug. 30, 1920. Serial No. 406,862. 3 Claims. (Cl. 132—90.)



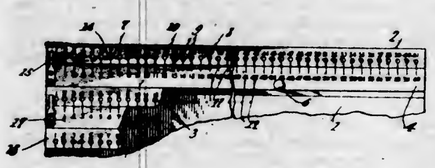
3. A device of the class described, comprising a relatively long container terminating at one end in an open throat, a closure for said throat having an axial bore made to receive and provide a holder for a toothpick so that the toothpick may be manipulated with the container serving as a handle, and means on the container for attaching the same to a watch chain.

1,385,289. PORTABLE ENGINE. FRANK D. WARD, New York, N. Y. Filed Nov. 16, 1917. Serial No. 202,422. 7 Claims. (Cl. 121—38.)



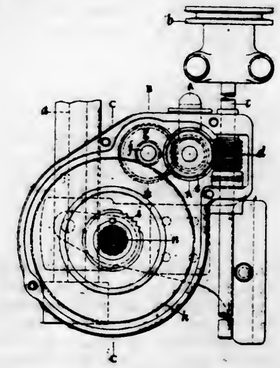
1. A self-contained manually portable engine, comprising a pair of cylinders arranged side by side in parallel, pistons working in said cylinders, a pair of rack bars carried by said pistons and projecting in the same direction therefrom, a pinion interposed between said rack bars and meshing therewith, an oscillating shaft mounted parallel to the axes of the cylinders and to one side thereof, gearing operatively connecting said pinion and shaft to drive the latter, means associated with said shaft for making a quick detachable connection with a driven member, a port adapted to make quick detachable connection with a compressed air pipe, and manually controlled valve means mounted on the opposite side of the cylinders from the oscillating shaft for establishing communication between said port and the respective piston cylinders to drive the pistons simultaneously in opposite directions therein, and thereby impart motion to said shaft.

1,385,290. CAN-CLOSURE. MATTHEW J. WELLING, Chicago, Ill., assignor of one-third to John C. Drabeck, Chicago, Ill. Filed May 29, 1920. Serial No. 385,175. 10 Claims. (Cl. 220—42.)



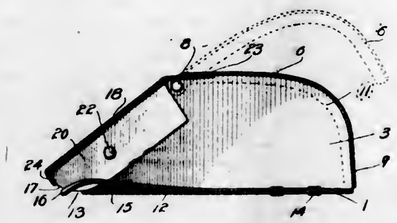
1. A closure for containers formed from a solid blank of metal shaped near its outer edge to provide two juxtaposed flanges carried respectively by an outer portion of the blank adapted to be secured to the wall of the container and by an inner or central portion of the blank, said flanges being severed at their lower edges whereby to constitute the central portion of the blank and its flange a cover element adapted to frictionally engage with the outer portion of the blank and its flange, the latter constituting a seat element.

1,385,291. GAS-PRODUCER. JOHN WELLS, Cairo, Egypt. Filed Nov. 1, 1919. Serial No. 335,078. 1 Claim. (Cl. 48—76.)



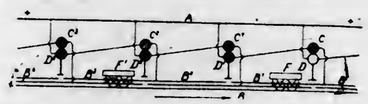
A gas producer having an upper fuel compartment and a lower gas producer chamber, a transverse plate separating the fuel compartment from the producer chamber and formed with an opening, a slide for opening and closing said opening, a bell or cone beneath said opening, a feed rod with helically arranged teeth and means for raising and lowering said rod to feed fuel through said opening.

1,385,292. COUNTER. JOHN EDWARD WHITAKER, Monroe, La. Filed Feb. 24, 1920. Serial No. 360,847. 1 Claim. (Cl. 235—90.)



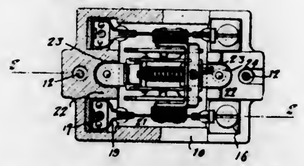
A tally device for keeping pool scores and the like, comprising guides, and a slide mounted for right line reciprocation between the guides, the slide having a scale, and one guide having a scale coöperating with the scale of the slide, the first graduation of the scale on the slide coinciding with the second graduation of the scale on the guide when the end of the slide is flush with the corresponding ends of the guides, there being holes in said guide individual to the graduations of the scale of the guide; a finger on the slide and overlapping the guide having the scale, the finger being disposed in tangential relation to the outer edge of the first of the holes when the first graduation of the scale on the slide coincides with the second graduation of the scale on the guide; and a pin forming a stop coacting with the finger, the pin being insertible into any of the holes.

1,385,293. DRILLING-MACHINE. ISAAC HENRY WRIGHT, Manchester, England, assignor to Smith & Coventry Limited, Salford, Manchester, England. Filed Dec. 16, 1919. Serial No. 345,297. 4 Claims. (Cl. 77—32.)



1. In means for giving automatic feed movement to drilling machine spindles, the combination comprising concentric clutch elements disposed respectively within and without each other, a ratchet wheel integral with the inner member and a pawl integral with outer member of the said clutch elements, a pivot supporting said outer member, and means imparting rocking movements to such outer member about the said pivot whereby the engagement and disengagement of the said pawl and ratchet wheel is effected, as set forth.

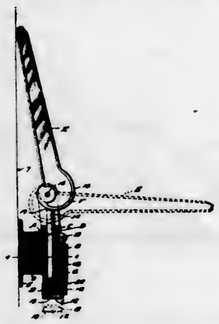
1,385,294. ICE SHAVER AND CRACKER. JOHN B. ZORN, Kansas City, Mo. Filed May 31, 1921. Serial No. 473,581. 7 Claims. (Cl. 83—62.)



1. In a device of the class described, a receptacle having an opening at one end, a blade projecting through the open end, and a gate for closing said open end pivoted intermediate its ends to the receptacle.

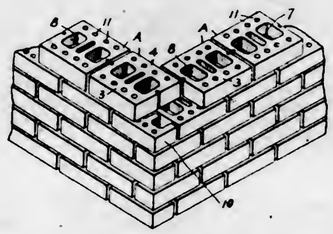
1,385,295. RAILWAY SIGNALING. EMILE PIERRE ANTOINE ABRIC, Paris, France. Filed Sept. 23, 1918. Serial No. 255,317. 5 Claims. (Cl. 246—89.)

1. In block signal apparatus for railroads, in combination, parallel continuous electrical mains, conductors divided into insulated overlapping sections, an electrical connection, including a signal lamp, between each section of said conductors and one of said mains, and means carried by a car for electrically connecting the other main simultaneously to one section of each of said conductors for the purpose set forth.



1,385,296. ELECTRIC SWITCH. CARL ERIC ANDERSON, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 23, 1916. Serial No. 127,146. 1 Claim. (Cl. 200—67.)

An electric switch comprising a cup-shaped rectangular body of insulating material having at its opposite ends ribs extending into the switch chamber, depressed ledges formed by channels in said ribs, a switch frame having a base resting against the bottom of the switch chamber and upwardly angled end lugs overlying said ledges and secured thereto, standards rising from the opposite sides of said base and having open bearings formed therein, a rocker pivoted to said standards adjacent the base; a switch piece pivoted in said open bearings in the standards above the axis of the rocker, a switch spring operatively interposed between said rocker and switch piece, and means for actuating said rocker, for the purpose described.



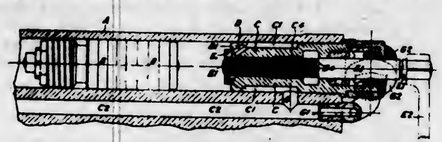
1,385,297. [WITHDRAWN.]

1,385,298. BOTTLE-CAPPING MACHINE. CALVIN L. BEARDSLEY, Rock Island, Ill. Filed June 8, 1920. Serial No. 387,481. 2 Claims. (Cl. 226—84.)

1. A bottle capping machine comprising in combination a support, a die including a stem reciprocable and freely movable circumferentially, with respect to said support, a lever including a cam, carried by said support, the cam engaging said stem, and a device coupling said die to said support and yieldably urging said stem into engagement with said cam.

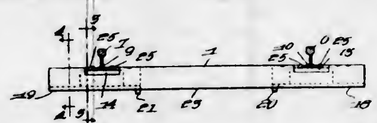
1,385,299. BUILDING-BRICK AND WALL CONSTRUCTION. GEORGE A. BILQUE, Crafton, Pa., assignor of one-half to J. H. Gloninger, Pittsburgh, Pa. Filed Apr. 19, 1918. Serial No. 229,495. 3 Claims. (Cl. 72—41.)

2. A hollow twin brick structure having two stretcher faces and two header faces, all of said faces having substantially the same dimensions, one of said header faces being provided with a centrally located channel-shaped recess adapted to divide said face into two similar header portions, the sides of said channel-shaped recess intersecting the header face at substantially right angles to form square corners on each of said header portions, and a portion of the inner wall of said recess being formed at substantially right angles to the said side walls thereof to give a definite depth to the recess, said recess also forming a cleavage portion facilitating the breaking of the twin brick structure into two similar standard sized bricks each having a finished stretcher face and a finished header end, and partition walls within the body of the brick on opposite sides of said channel-shaped recess and offset therefrom, said walls extending substantially parallel to said stretcher faces, substantially as described.



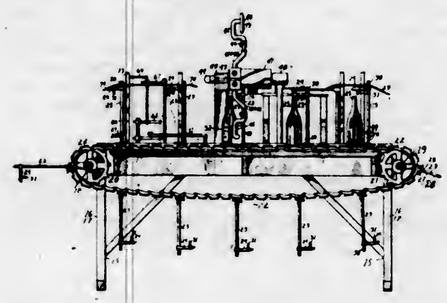
1,385,300. ILLUMINATING DEVICE FOR SWITCHES, &c. KONRAD BOHRDT, Buenos Aires, Argentina. Filed Oct. 13, 1920. Serial No. 416,740. 1 Claim. (Cl. 240—1.)

An illuminating device of the class described comprising a frame consisting of an inner member and an outer member, the inner member being provided at its inner periphery with an outstanding flange defining a shallow recess in the face of the member, the said flange being spaced inwardly from the inner periphery of the outer member of the frame, a luminous substance in the recess, and a transparent means covering the recess and protecting the said substance and engaging at its rear side with the edge of the said flange and at its forward side with the inner face of the outer member of the frame.



1,385,301. RECOIL APPARATUS FOR ORDNANCE. AXEL BREMBERG and ALEXANDER BANKS, Glasgow, Scotland. Filed June 17, 1920. Serial No. 389,737. 4 Claims. (Cl. 89—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

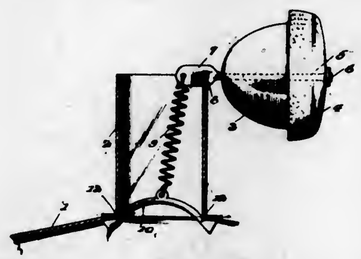
1. A recoil apparatus for ordnance, comprising a cylinder, a floating piston therein subjected on one face to air pressure and on its other face to a pressure liquid, a plug closing the liquid entry end of the cylinder, but affording a chamber communicating with the liquid inlet port, passage means between said chamber and the cylinder, a valve



controlling said passage, means for displacing said valve into engagement with the floating piston to support the latter against the air pressure thereon, and a normally closed liquid fill port communicating with the cylinder.

1,385,302. RAILROAD-TIE. LEONARD L. BROWN, Clifton Forge, Va., assignor of one-fourth to Robert E. Robinson and one-fourth to George I. Grasty, Clifton Forge, Va. Filed Mar. 8, 1921. Serial No. 450,760. 7 Claims. (Cl. 238—286.)

6. A metallic tie having transverse recesses, pockets wider than said recesses, formed thereunder and blocks seated in said pockets and projecting above the surface of said recesses and means whereby said blocks may be reversed.

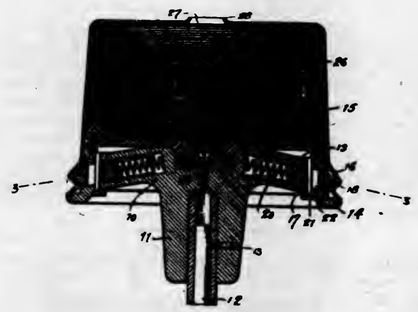


1,385,303. LABELING-MACHINE. LINUS F. BURGHARDT, Westfield, N. Y. Filed June 1, 1920. Serial No. 385,586. 33 Claims. (Cl. 216—55.)

1. In a labeling machine in combination with labeling mechanism, a main conveyer belt for the containers to be labeled, a feed conveyer belt alongside the initial end of said conveyer belt to feed said containers thereonto, a distributing belt alongside the rear end of said conveyer belt, and means to guide said containers onto said main conveyer belt from said feed belt and to remove said containers from said main conveyer belt to said distributing belt and labeling mechanism associated with said main conveyer belt.

1,385,304. AUTOMOBILE-RADIATOR CAP. THOMAS O. BUSSLER, Wheelersburg, Ohio, assignor of one-half to Cecil Nolche, Portsmouth, Ohio. Filed Apr. 24, 1920. Serial No. 376,317. Renewed Dec. 16, 1920. Serial No. 431,274. 2 Claims. (Cl. 220—35.)

2. In combination with an automobile radiator formed with a cylindrical filler neck extending outward therefrom, of a cap for said neck having a substantially spherical body portion, a plate projecting from the inner face of said cap and formed with a notch in its edge, an

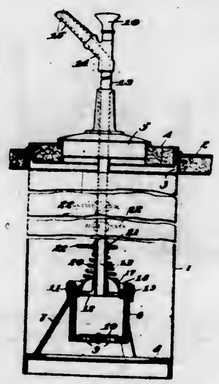


arched arm extending across the base of said neck and formed with notches near its extremities to engage the radiator wall surrounding the neck, and a spring within said neck connecting said plate with said arm.

1,385,305. STORAGE-BATTERY ELECTROLYTE. FRED D. CHENEY, Gypsum, Kans. Filed Mar. 21, 1921. Serial No. 454,280. 2 Claims. (Cl. 204—29.)

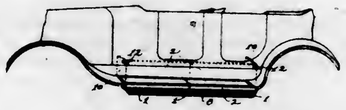
1. The herein described composition of matter consisting of water, sulfuric acid, and sodium phosphate, substantially as described, and for the purpose specified.

1,385,306. SPINNING-BOX FOR ARTIFICIAL SILK. JAMES CLAYTON, Coventry, England, assignor to Courtaulds, Ltd., London, England. Filed Apr. 8, 1918. Serial No. 227,348. 6 Claims. (Cl. 118—49.)



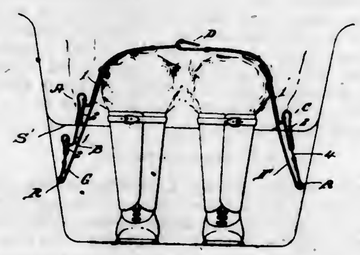
1. A spinning box of the class described comprising a relatively heavy base adapted to be mounted in fixed position on a spinning spindle, and an independent relatively light basket-like cover adapted to rest on said base and form therewith a spinning chamber, and outwardly displaceable means carried by and permanently affixed to the base for detachably securing said cover to the base during the spinning operation.

1,385,307. PUMP. ERNEST L. CONDON, Medway, Mass., assignor to United Soda Fountain Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1920. Serial No. 349,897. 10 Claims. (Cl. 225—35.)



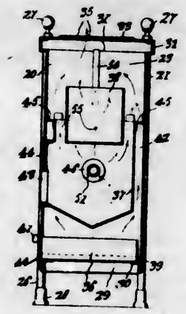
1. A pump comprising a container, an annular cover therefor, a cap for the opening in said cover, a removable pump cylinder in the container, a piston in said cylinder removable through the top of the cylinder without remov-

ing the cylinder from the container, a top for said cylinder normally closing the same but freely removable with the



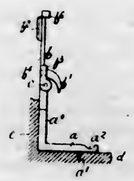
piston therefrom, and a stem fast to the piston extending upward through said cap.

1,385,308. RUNNING-BOARD CARRIER. ISAIAH W. COPELIN, Toledo, Ohio. Filed Dec. 16, 1919. Serial No. 345,227. 3 Claims. (Cl. 280—164.)



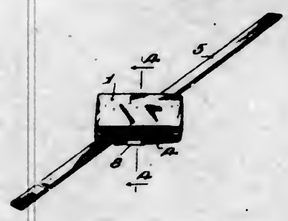
1. In a device of the character described, a running-board, the major portion of which is hinged at its outer edge and capable of assuming either an upright or a horizontal position, and which is flush with the surrounding stationary portion of the running board when in the latter position, in combination with a substructure forming a rigid part of the machine coöperating with the running-board when the latter is raised to form an article-carrier, and covered and concealed thereby when in its normal horizontal position.

1,385,309. ADJUSTING DEVICE FOR BELTS. JOHN H. DAVIS, New York, N. Y. Filed Apr. 17, 1918, Serial No. 229,122. Renewed Nov. 5, 1920. Serial No. 422,075. 7 Claims. (Cl. 24—71.)



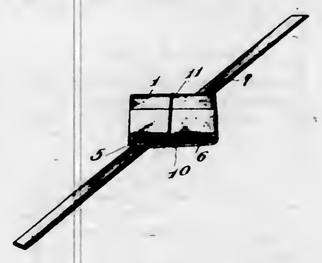
1. In a device of the type described, an adjustable take-up device comprising a hook member and a closed link member pivoted to the end of the hook member and a link slidably engaging the link member; said hook member being adapted to be connected at its free end with one part of a belt, and the link being adapted to be connected with another part of the belt; said link member when in one position forming a link of the belt and extending same, and when turned into position beside the hook member causing the said slidable link to engage the hook member and thus shorten the belt.

1,385,310. GAS-STOVE. JOHN F. DOMHOFF and ROBERT M. SABO, East St. Louis, Ill. Filed Jan. 3, 1921. Serial No. 434,718. 5 Claims. (Cl. 126—20.)



1. A gas stove comprising a stove body open at its top and bottom, a burner arranged in the body, a heating drum surrounding the burner and opening at its lower end through the front of the stove body and being open at its top, and a super-heating drum arranged above the opening in the lower end of said first drum and adapted to be heated by the burning of gases from said burner and adapted to ignite any gases liberated from the burner and tending to rise through said first drum.

1,385,311. FASTENER, SUPPORT, AND THE LIKE. GEORGE CHARLES DUPONT, South Croydon, England, assignor to Philip and Tracey, Limited, Fulham, London, England. Filed Mar. 19, 1921. Serial No. 453,675. 6 Claims. (Cl. 16—26.)



5. A device for attachment to a surface, said device consisting of a member provided with prongs, a flap, a hinge-pin for hinging the said member and flap together, curved prongs mounted on said hinge-pin and operatively engaging said flap so as to move therewith, and means for locking the said member and flap together.

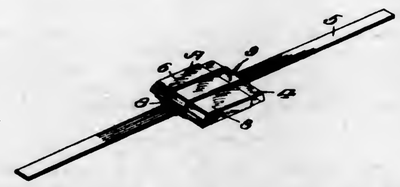
1,385,312. RAILWAY SIGNAL-TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,372. 6 Claims. (Cl. 246—487.)

1. The combination with an angular shaped torpedo case, composed of a folded sheet, of a rail-engaging strap located and held between the folds of the sheet in diagonal relation to the torpedo case, for the purpose described.

1,385,313. RAILWAY SIGNAL-TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,373. 4 Claims. (Cl. 246—487.)

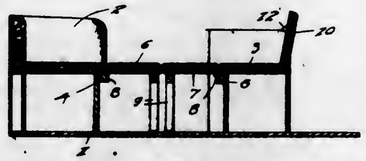
1. A railway signal torpedo having a case, composed of a sheet wrapped around an explosive charge, a rail-engaging member embraced by the final folds of the case, and a string holding the final folds of the case and the strap in position.

1,385,314. RAILWAY SIGNAL-TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1921. Serial No. 435,644. 6 Claims. (Cl. 246—487.)



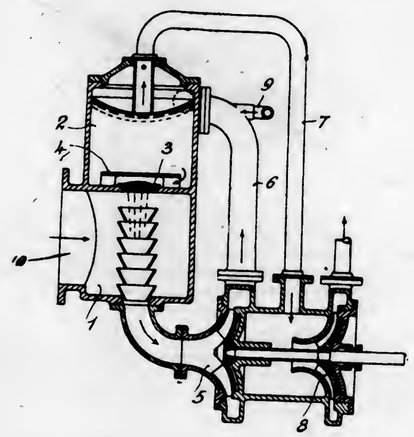
1. A torpedo comprising a case composed of a sheet wrapped in a plurality of folds around an explosive charge to form extended wrapped portions folded inward upon the explosive charge, and a rail-engaging member secured upon the case between the adjacent ends of the inwardly folded wrapped portions.

1,385,315. RAILWAY SIGNAL-TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 2, 1921. Serial No. 441,716. 4 Claims. (Cl. 246—487.)



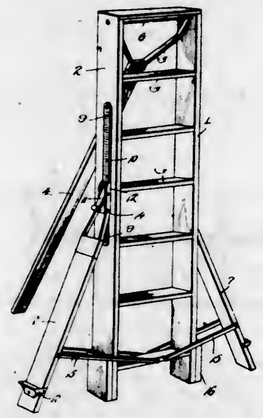
1. A railway signal torpedo having a case, a rail-engaging member carried upon one side of the case, and strings wrapped first around the rail-engaging member and then around the case at opposite ends thereof and binding the rail-engaging member to the case.

1,385,316. RAILWAY SIGNAL-TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporatoon of New Jersey. Filed Feb. 2, 1921. Serial No. 441,717. 4 Claims. (Cl. 246—487.)



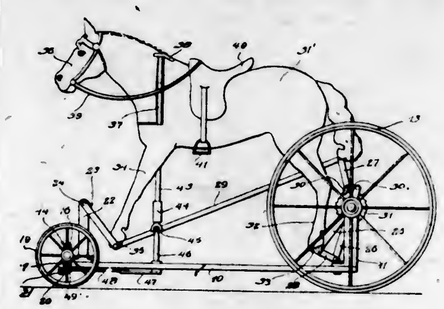
1. The combination with a case of a railway signal torpedo and rail-attaching member at one side thereof, of a string pressed around the rail-attaching member at points adjacent the edge of the case and across the case in separated parallel lines, and means for holding the string in its wrapped position.

1,385,317. CONVERTIBLE VEHICLE-BODY. GON Z. DYER, Williamson, W. Va. Filed Apr. 12, 1916. Serial No. 90,737. 1 Claim. (Cl. 155—7.)



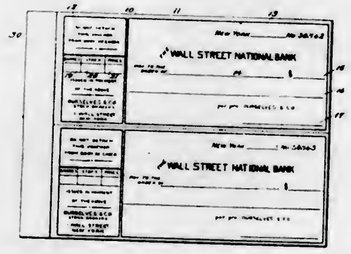
A convertible automobile body comprising front and rear seats each including back and seat portions and the back portion of the rear seat being rigidly secured to the seat portions of said rear seat, links pivoting the back portion of the front seat to the seat portion thereof so that said last mentioned back portion may be moved from the rear edge to the front edge of the seat portion of the front seat, strips secured to the front and rear seats along their rear and front edges respectively, extensions of widths equal to the width of the seat portion hinged to said strips and adapted to be moved into a plane with the seat portion with their attached edges overlying the strips, and links hinged to said extensions for supporting them in said position.

1,385,318. **WET CENTRIFUGAL COMPRESSOR.** JENS WILLIAM ÆGIDIUS ELLING, Christiania, Norway, assignor to A/S Myrens Verksted, Christiania, Norway. Filed Mar. 6, 1920. Serial No. 363,671. 5 Claims. (Cl. 230—11.)



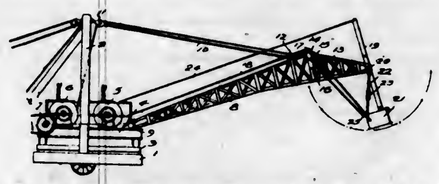
1. The process of compressing a gaseous medium, which comprises adding to the medium before compression an amount of liquid, compressing the mixture, separating part of the liquid from the mixture after compression, and returning the separated liquid to the compressor.

1,385,319. **LADDER.** MARTIN F. ENKE, Oakland, Calif. Filed Apr. 14, 1920. Serial No. 373,879. 2 Claims. (Cl. 228—31.)



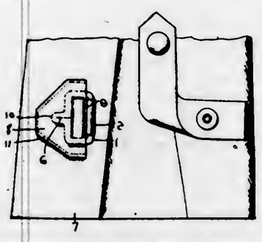
1. An improved ladder comprising a ladder body having side bars provided with an elongated rack, said rack having a plurality of perforations, auxiliary legs provided with a sliding sleeve pivotally attached to the upper ends thereof, a spring pawl within the sliding sleeve, and adapted to engage the perforations in said elongated rack, said auxiliary legs may be adjusted to swing in an arc from the ladder body substantially as specified.

1,385,320. **TOY HORSE.** D ROY FRICK, Richland, Mo. Filed June 22, 1920. Serial No. 390,751. 3 Claims. (Cl. 208—42.)



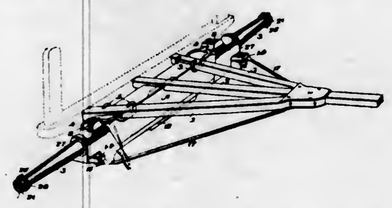
1. A device of the character described comprising a support, rear wheels journaled thereon, a ratchet associated with the rear wheels, a U-shaped rocking member mounted for rocking movement at the rear end of said support, arms pivoted at the rear end of the support, pawls carried by said arms and engaging said ratchet, a U-shaped rocking member mounted upon the forward end of the frame and connected with one of said arms, front wheels carried by the forward end of the frame, and a body formed as the representation of an animal including legs supported upon said rocking members whereby when the body is rocked said pawls will impart rotary movement to said rear wheels.

1,385,321. **COMBINATION CHECK, RECEIPT, AND RECORD.** ARTHUR V. FRY, Ridgewood, N. J. Filed Apr. 15, 1918. Serial No. 228,573. 3 Claims. (Cl. 283—58.)



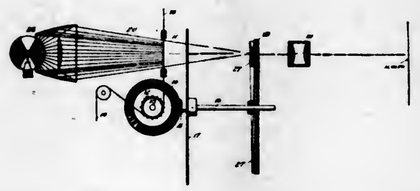
1. A device of the character described comprising a plurality of members, one of said members having a plurality of portions, each of which is provided with spaces adapted to receive written data relating to a business transaction, another of said members positioned below said first-named member and co-extensive in size therewith, said second-named member being provided with spaces corresponding to and registering with the spaces on both portions of said first-named member, whereby said second-named member is adapted to receive an imprint of all of the data written on said first-named member, and another of said members being positioned below said first-named member and co-extensive in size with one only of the portions thereof, said third-named member being provided with spaces registering with the spaces on said one portion only of said first-named member, whereby said third-named member is adapted to receive an imprint of the data written on said one portion only of said first-named member, substantially as specified.

1,385,322. **EXCAVATING-MACHINE.** CONRAD M. HOFFMEYER, Stratford, Ontario, Canada. Filed Mar. 24, 1917. Serial No. 157,159. 1 Claim. (Cl. 214—138.)



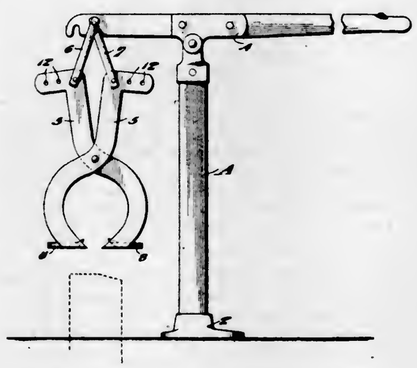
An excavating machine including a trussed edgewise disposed boom adapted to be pivoted at one end to a supporting structure and enlarged in width near its free end with enlarged vertical brace bars at the limit of its enlargement, the upper edge of the free end of said boom being inclined downwardly from said enlarged braces and the lower edge of said boom being inclined downwardly from a point spaced inwardly from said braces to its free end and at an angle less acute than the upper inclined portion whereby the stress on the outer end of the boom will be evenly distributed throughout, a pulley carried by the boom at the upper end of said enlarged vertical bars, another pulley in the rear of said brace carried pulley and a digging shovel carried by the free end of said boom.

1,385,323. **BUCKLE.** WILLIAM HORN, Oneonta, N. Y. Filed July 29, 1920. Serial No. 399,743. 1 Claim. (Cl. 24—265.)



The combination with two plies of material superposed one on the other, a T-shaped row of stitching connecting said plies, the head of said T being formed of a pair of parallel laterally spaced rows connected at their ends, a rectangular buckle for insertion between said plies and having a loop extending laterally from one side bar thereof, the members of said loop being designed to straddle the shank of the T-shaped row of stitching, the body of the buckle fitting snugly around the head of the T-shaped row with all except one side member disposed between said plies, and a row of stitching outlining the portion of said buckle disposed between said plies, said outlined stitching being in close proximity to the buckle whereby it is securely held against movement.

1,385,324. **AXLE FOR RUNNING-GEARS OF WAGONS.** FRANCIS M. JACOB, Columbus, Miss. Filed May 15, 1919. Serial No. 297,245. 3 Claims. (Cl. 301—125.)



1. The combination with an axle and hounds, of skeins and bolts hooked over the hounds and connected with the skeins for securing the skeins at their tops to the axle.

1,385,325. **MOTION-PICTURE MACHINE.** CHARLES FRANCIS JENKINS, Washington, D. C. Filed Oct. 23, 1919. Serial No. 332,742. 7 Claims. (Cl. 88—16.8.)

1. An annular refracting prism of approximately rigid material having its thickness at one margin progressively varied, with respect to the thickness of the other margin and in passing along the circular curve, from a predetermined maximum to a predetermined minimum.

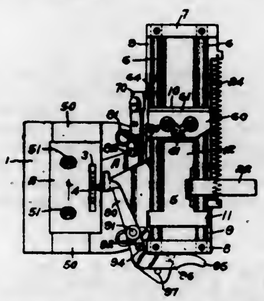
1,385,326. **POST-PULLER.** CLAUDE O. LEISURE, Broken Bow, Nebr. Filed May 15, 1919. Serial No. 297,192. 1 Claim. (Cl. 254—132.)

A post-puller including an upright, a lever fulcrumed thereon, links extending from the lever, grappling-tongs made in pairs and pivoted together, and connected at their lower ends by horizontally-disposed grappling-jaws having an internal concaved arrangement of teeth, the upper ends of the grappling-tongs extending laterally and provided with a plurality of holes, and links extending from such of said holes as desired to a common point of support on the lever.

1,385,327. **UMBRELLA.** JERRY M. LEWIS, Little Rock, Ark. Filed Dec. 4, 1920. Serial No. 428,333. 2 Claims. (Cl. 135—38.)

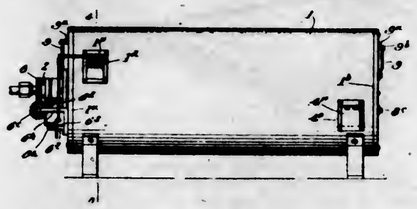
2. The combination with the tubular rod of an umbrella or the like, a tongue movably mounted therein and normally projecting therefrom, and a runner slidable on the rod and movable into and out of engagement with the tongue, of a resilient spiral mounted for rotation within the rod, means within said rod for engaging the spiral, a wedging head connected to one end of the spiral and slid-

able within the rod and into and out of engagement with the tongue, and key operated means for rotating the



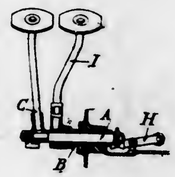
spiral relative to the spiral engaging means to extend the spiral and direct the head into or out of engagement with the tongue.

1,385,328. FOOTWEAR-SUPPORT. CHARLES W. LOUDENSLAGER, (now by judicial change of name Charles Wescott Louden,) Los Angeles, Calif. Filed Feb. 2, 1920. Serial No. 355,790. 2 Claims. (Cl. 36—58.5.)



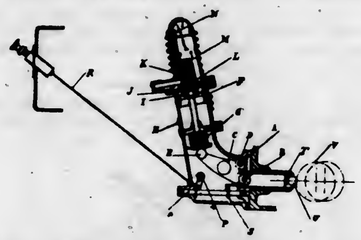
1. A device of the character described comprising a strip of suitable material constructed and adapted to engage the instep of the foot and the shank of a pump, an elastic medium attached near the ends of and conjoining said strip, the ends of said strip being provided with eyelets, and an ornament engaging the eyelets, for lacing together the end of the strip and covering said elastic medium.

1,385,329. TRIMMING DEVICE FOR SEWING-MACHINES. WILLIAM A. NEELY, Lynn, Mass.; Jas. S. Richardson administrator of said William A. Neely, deceased. Filed Oct. 26, 1918. Serial No. 259,754. 4 Claims. (Cl. 112—122.)



1. In a trimming device for sewing machines, the combination with a throat plate having a needle hole, a horizontal under edge trimming blade movable in a rectilinear line parallel to the feed of the machine and guide ways in which the throat plate is adjustable laterally relatively to the needle hole.

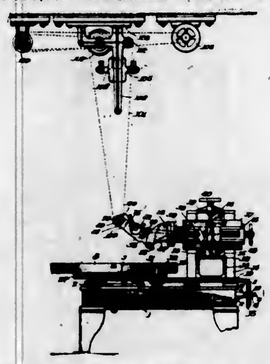
1,385,330. AUTOMATIC COOKING-MACHINE. OWEN ELSWORTH VANCE and PAUL STANLEY BAKER, Muscatine, Iowa. Filed Dec. 5, 1917. Serial No. 205,678. 10 Claims. (Cl. 193—1.)



1. In combination, a horizontally disposed cylindric casing having a spiral guide way, and a rotatable can carrier disposed axially of and within the casing, adjustable bearings for the can carrier attached to the heads of the casing, means for vertically adjusting said bearings to adjust the carrier vertically within the casing and eccentric to the guide way, and means for fastening the bearings when adjusted.

1,385,331. FOOT-LEVER CONSTRUCTION FOR MOTOR-CARS. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed Sept. 21, 1920. Serial No. 411,829. 2 Claims. (Cl. 74—81.)

1. A foot lever construction for motor cars comprising in combination a bushing adapted to be secured to the vehicle, a pedal spindle rotatably mounted in said bushing, a pedal secured on said spindle, a brake actuating pedal rotatably mounted on said bushing and means operated by said spindle for operating the clutch device.

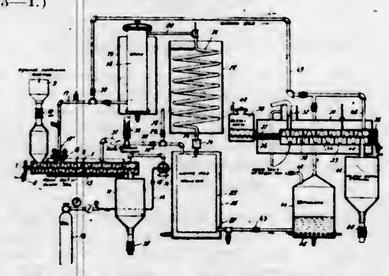


1,385,332. AIR-COMPRESSOR FOR MOTOR-VEHICLE TIRES. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed Mar. 30, 1921. Serial No. 456,935. 7 Claims. (Cl. 230—27.)

1. An air compressor for penumatic tires of motor vehicles, comprising in combination, a cam, a pusher actuated by the said cam, a guideway having the said pusher slidable therein, a swinging lever, means for operatively connecting the said pusher to the said swinging lever, a cylinder, a piston slidable within the said cylinder, means for operatively connecting the said swinging lever to the said piston, means for admitting air into the said cylinder, an air chamber connected with the said cylinder,

means for opening and closing the passage between the cylinder and the said air chamber, and means for evacuating the compressed air.

1,385,333. MACHINE FOR ENGRAVING MOLDS. ALBERT A. BUSH and RICHARD H. FREITAG, Akron, Ohio, assignors to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 18, 1919. Serial No. 331,663. 14 Claims. (Cl. 90—13.6.)

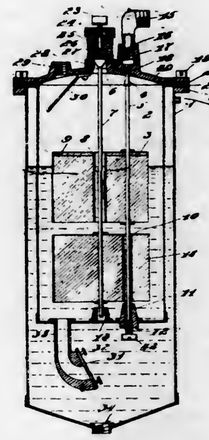


1. In a machine for the purpose set forth, the combination of a tire mold carrier, a cutting tool carrier, said elements being independently movable so that the tool may reach any part of the mold surface to be cut, a pattern for a section of the mold, a pattern follower, the mold carrier being connected to one of said parts, the tool carrier to the other, and independent means to move the tool carrier relatively to the mold to present a new section of the mold to the tool so that the design may be repeated on the mold.

1,385,334. METHOD OF REPAIRING SCORED CYLINDERS. ROSS D. HEACOX, Washington, D. C. Filed Mar. 18, 1921. Serial No. 453,502. 3 Claims. (Cl. 29—156.4.)

1. A process of repairing scored cylinders which consists in cleaning and fluxing the scores and then soldering therein a hard solder having the property of expanding on cooling.

1,385,335. PRODUCTION OF HYDROCYANIC ACID. FLOYD J. METZGER, New York, N. Y., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed May 3, 1919. Serial No. 294,377. 11 Claims. (Cl. 23—1.)

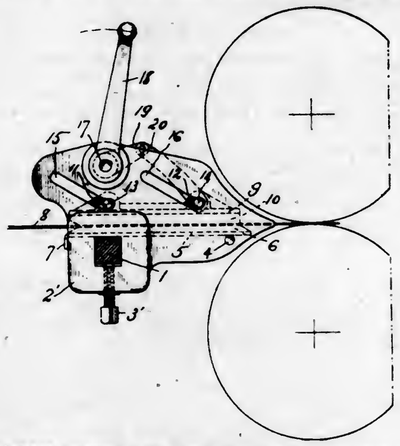


1. A method of producing hydrocyanic acid which comprises subjecting a solid cyanid containing material to the action of carbon dioxid and regulating the temperature of the mass in the reaction zone to prevent polymerisation of the hydrocyanic acid.

1,385,336. PRODUCTION OF HYDROCYANIC ACID. FLOYD J. METZGER, New York, N. Y., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Aug. 14, 1919. Serial No. 317,440. 12 Claims. (Cl. 23—1.)

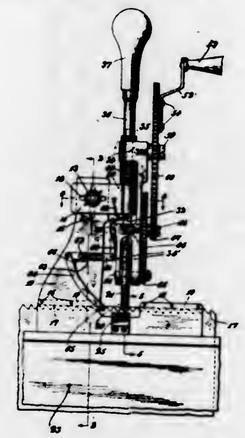
1. The method of recovering hydrocyanic acid from solid cyanid-containing material, which comprises, causing carbon dioxid to react with the material, and withdrawing the gaseous end product of the reaction at a rate precluding the substantial polymerization of the hydrocyanic acid.

1,385,337. FUEL-FEEDING SYSTEM FOR AUTOMOBILES. WILLIAM H. MUZZY, Chicago, Ill. Filed May 10, 1920. Serial No. 380,156. 11 Claims. (Cl. 158—36.)



1. In a fuel feeding system the combination with a tank having a vacuum chamber and a supply chamber, the former with a suction port, an atmosphere port and a fuel inlet port, of a valve for the suction port, a float for opening and closing the valve, a valve for the atmosphere port, a float for opening and closing this latter valve operating independently of the first mentioned float and so located in relation to the first float that its point of buoyancy has been passed when the first float rises, and means for discharging gasolene from the vacuum chamber to the supply chamber.

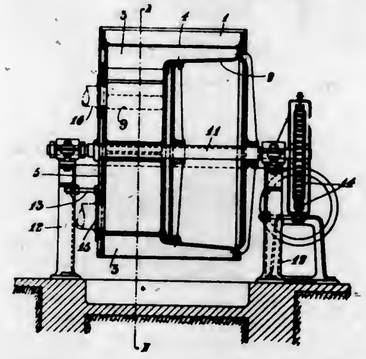
1,385,338. METAL-GUIDE FOR ROLLING-MILLS. WILLIAM A. ROBBINS, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 9, 1920. Serial No. 415,756. 5 Claims. (Cl. 80—51.)



5. In a peg guide for metal rolling mills, the combination of side pieces and a lower guide member supported thereby, an upper movable member adapted to be moved toward and from said lower member, said upper member having lateral projections and said side members having inclined ways engaged by said lateral projections so as to

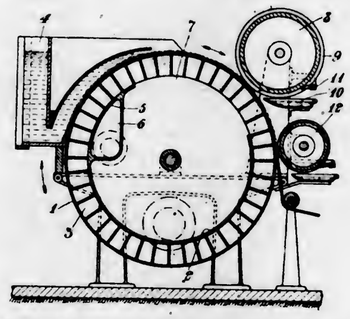
move said upper member toward and from said lower member as it is reciprocated in one direction or the other,

said ways consisting of slots extending through said side members and said projections extending through said slots.



1,385,339. SAW-SHARPENING APPARATUS. CARL STANZEL, New York, N. Y. Filed Oct. 4, 1919. Serial No. 328,516. 5 Claims. (Cl. 76—41.)

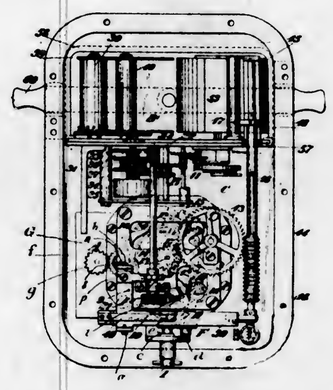
1. In a saw sharpening apparatus, the combination with an L shaped frame, bifurcated in its lower portion to receive a saw blade, a forked element slidable on the raised portion of said frame, means for securing said forked element adjustably on said frame, an abrading wheel carried in said forked element, means for manually rotating said abrading wheel, and means for raising or lowering said abrading wheel with reference to the teeth of the saw.



1,385,340. STRAINER-CYLINDER FOR WOOD-PULP AND CELLULOSE. RUDOLF ERNST WAGNER, Karlstad, Sweden, assignor to Aktiebolaget Karlstads Mekaniska Verkstads, Karlstad, Sweden, a Manufacturing Company of Sweden. Filed Aug. 9, 1920. Serial No. 402,376. 3 Claims. (Cl. 92—38.)

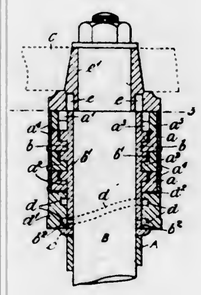
1. In a strainer cylinder for wood-pulp and cellulose, the combination of a pulp container, a rotary cylinder divided into cells, a strainer cloth surrounding said cells and forming the outer surface of said cylinder, an upward rotating portion of said strainer cloth above the horizontal plane through the axis of said cylinder forming one wall of said pulp container, a stationary suction box located in the interior of said cylinder within said cells and having a suction opening opposite the upper part of said portion of the strainer cloth forming a wall of said container, and a wall opposite the lower part of

said portion of the strainer cloth, said wall forming a stationary bottom for the cells covered by said part, for the purpose that during the rotation of the cylinder the cells moving into the pulp container shall at first be closed and shut off from the suction box and afterward placed into communication with said suction box when a filter layer has been formed on the strainer cloth over said cells by natural straining.



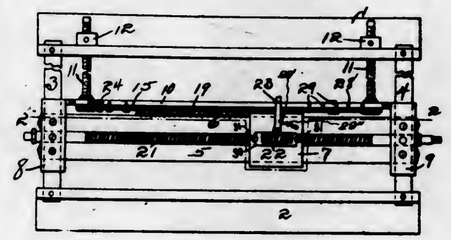
1,385,341. PULP-VAT AND THE LIKE. RUDOLF ERNST WAGNER, Karlstad, Sweden, assignor to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden, a Manufacturing Company of Sweden. Filed Aug. 9, 1920. Serial No. 402,377. 1 Claim. (Cl. 92—38.)

In a pulp-vat and the like, the combination of a rotary strainer cylinder for gathering the pulp, and a press roller bearing against said cylinder and provided with peripheral grooves, notches, deep slots, or the like, for the purpose of rendering possible an increased pressing out of the pulp sheet gathered on the strainer cylinder.



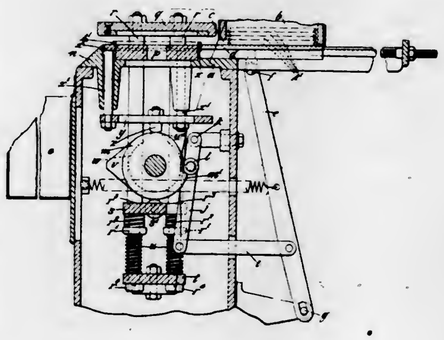
1,385,342. SPEED-RECORDER FOR VEHICLES OR LOCOMOTIVES. FRIEDRICH WILHELM GUSTAV BRUHN, Wilmersdorf, near Berlin, Germany. Filed Mar. 20, 1920. Serial No. 367,523. 8 Claims. (Cl. 234—33.)

1. In a device for recording the speed of travel of a vehicle, a recording tape, a tape feed mechanism for moving the tape, a primary driving means adapted to impart an amount of movement to the tape feed mechanism that is proportional to the distance covered by the vehicle, a secondary driving means, a transferring means for transferring the drive of the tape feed mechanism from the primary driving means to the secondary driving means whenever the speed of travel sinks below a certain limit,



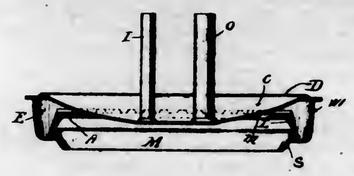
an impressing needle for making impressions on the said recording tape, a speed indicator adapted to be driven by the primary driving means, and intermediate gear between the speed indicator and the impressing needle for moving the needle in accordance with the movements of the indicator.

1,385,343. PERMUTATION-LOCK FOR AUTOMOBILES. HERBERT ERNEST DAKIN, London, England, assignor to Herbert E. Dakin Limited, London, England, a Corporation of Great Britain. Filed Dec. 24, 1920. Serial No. 433,009. 2 Claims. (Cl. 70—53.)



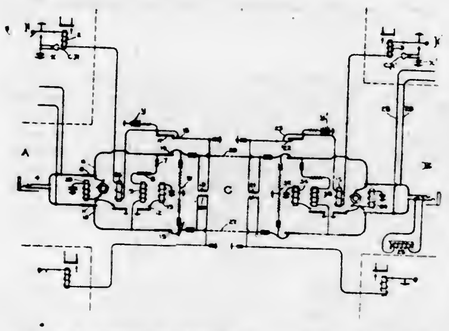
1. In a steering wheel lock the combination with a steering wheel having recesses in the underside of the hub thereof and steering mechaniam supporting the wheel, a sleeve fixed to a part of said mechanism and having longitudinal guide grooves in its sides, tongues slidably mounted in said grooves and adapted to enter the said recesses of the hub, a shifting ring mounted to turn on said sleeve and having a cam groove therein for each tongue, pins projecting from the tongues into said cam grooves for actuating the tongues upon turning of the ring, a plurality of code rings arranged in superposed relation about said sleeve and tongues and having interlocking elements adapted to engage the tongues and adapted to be individually turned to free said tongues for operation, and code bearing strips separately mounted on said code rings for individual adjustment thereon whereby the code may be changed from time to time without changing the construction of the code rings.

1,385,344. PORTABLE LOCOMOTIVE-VALVE-SEATING MACHINE. JAMES J. MOONEY and RICHARD E. BENNETT, Wichita Falls, Tex. Filed Aug. 4, 1919. Serial No. 315,067. 4 Claims. (Cl. 90—24.)



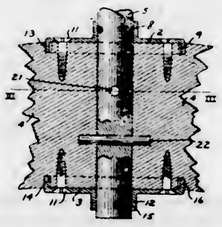
1. A valve seating machine comprising a frame including longitudinal guide and supporting bars, a traveling tool head movable on said guide bars, means for reciprocating said head on said guide bars including a shaft provided with a worm thread and a worm wheel journaled in said tool head and adapted to mesh with said shaft, means for automatically locking said worm wheel to said tool head and for releasing said wheel from said head, and a counterweight for returning said head to starting point.

1,385,345. METHOD OF MANUFACTURE OF PISTON-RINGS. WILLIAM A. OUBRIDGE, Coventry, England. Filed Oct. 6, 1919. Serial No. 328,715. 2 Claims. (Cl. 29—156.6.)



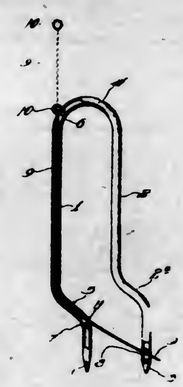
1. The method or process of piston ring manufacture, which comprises the following essential steps, viz:—(I) raising the ring blank to a red heat; (II) conforming the ring blank, at a red heat to "the selected curve," as near as may be, by pressure between suitably shaped dies; (III) quickly removing from the inner die, and (IV) regulating cooling, all substantially as hereinbefore described and for the purposes hereinbefore specified.

1,385,346. SURGICAL WOUND-DAM. WALTER HERBERT TAYLOR, Guelph, Ontario, Canada. Filed June 27, 1919. Serial No. 307,248. 13 Claims. (Cl. 128—248.)



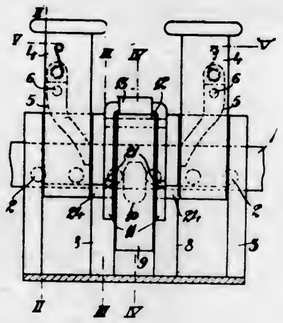
1. A surgical wound dam formed of flexible rubber and comprising a ring; a wall depending from the ring; an inwardly and downwardly directed annular flange formed at the lower edge of the wall; and a cover closing the top of the chamber within the ring and wall.

1,385,347. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1918. Serial No. 215,249. 15 Claims. (Cl. 179—27.)



9. In a telephone system, a trunk line, a signal at one end of said trunk line, a controlling circuit for said signal superimposed on one conductor of said trunk line, a relay in said circuit, means controlled by alternating current for sending an impulse of direct current over said circuit to operate said relay, and means controlled by said relay for operating said signal.

1,385,348. CHAIR-BASE. OSWALD H. HANSEN, Port Washington, Wis. Filed Oct. 30, 1920. Serial No. 420,595. 10 Claims. (Cl. 155—138.)



1. A chair base comprising an upright seat supporting rod, a pair of spaced plates rigidly attached to said rod, each of said plates having a continuous peripheral flange extending toward the other plate, and a plurality of legs having both of said flanges embedded therein.

1,385,349. LOCKING HAIR-FASTENER. ROY C. JONES, Chicago, Ill. Filed May 2, 1921. Serial No. 466,104. 6 Claims. (Cl. 132—51.)

1. A hair fastener having two prongs arranged side by side and connected together at their bases, one of said prongs having an open ended passage extending lengthwise through the same from the base to a point on the inner side near the free end of the prong, the other prong having near the free end thereof an opening facing the adjacent open end of said passage, and a light resilient wire long enough to extend through said passage and across the space between the prongs and into said opening.

1385,350. CALCULATING-MACHINE. EDVARD KUIKKA, Gottenborg, Sweden, assignor to Aktiebolaget Original-Odhner, Gottenborg, Sweden, a Corporation of Sweden. Filed Nov. 4, 1919. Serial No. 335,661. 9 Claims. (Cl. 235—63.)

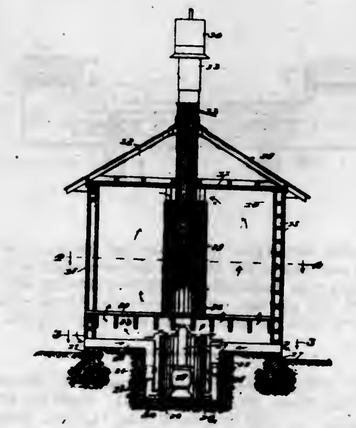
1. In a calculating machine having a movable carriage, a tabulating device comprising projections arranged at intervals and connected with said carriage, an escapement pawl movable at right angles to the direction of movement of the carriage and having a sliding surface adapted to actuate said projections to move the carriage, means normally locking the projections operated by the actuating movement of the pawl to release the projections, and means whereby the locking means is returned to normal position in advance of the return movement of the pawl.

5. In a calculating machine, the combination of a casing, a carriage movable in said casing, a row of projections on said carriage, and a member in said casing movable at right angles to the direction of movement of the carriage, said member having a cam surface to engage with said projections, for the purpose described.

9. In a calculating machine, the combination of a casing, a carriage movable horizontally in said casing, a horizontal row of projections on said carriage, and two keys movable up and down on said casing, members on said keys having oppositely positioned cam surfaces to engage with said projections.

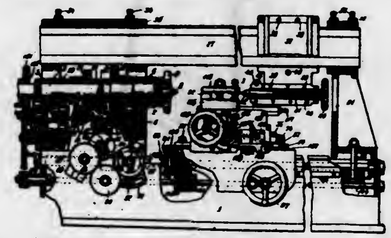
REISSUES.

15,154. INSECT-KILLING DEVICE. GEORGE W. GOMBER, Conyngham, Pa., assignor, by mesne assignments, to A. W. Drake Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1918. Serial No. 248,643. Original No. 1,161,654, dated Nov. 23, 1915, Serial No. 12,046, filed Mar. 4, 1915. 9 Claims. (Cl. 43—137.)



9. A fly killing device comprising a handle; and a flap on said handle formed of a perforated sheet of soft flexible non-abrasive material, substantially as described.

15,155. EXPLOSIVE COMPOUND. ROY LINDEN HILL and ARCHIBALD JACKSON STRANG, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 14, 1921. Serial No. 469,567. Original No. 1,307,495, dated June 24, 1919. Serial No. 260,631, filed Nov. 1, 1918. 11 Claims. (Cl. 52—7.)



4. An explosive comprising a hygroscopic ingredient and copper sulfate.

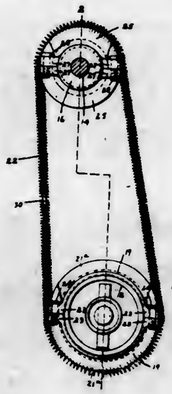
15,156. CURING-HOUSE FOR SWEET POTATOES. ELIJAH JASPER ILES and ODIE LEE HASTINGS, Alexandria, La., assignors to Alexandria Potato Curing Company, Inc., Alexandria, La., a Corporation of Louisiana. Filed Mar. 8, 1921. Serial No. 450,604. Original No. 1,353,752, dated Sept. 21, 1920, Serial No. 387,559, filed June 9, 1920. 11 Claims. (Cl. 98—26.)

10. A curing house including means forming a curing chamber having a reticulate charging floor, a vertical cylinder in the curing chamber having a closed lower end and an open upper end, an outlet air flue having a lower open end depending into the said cylinder, a heating pit below the charging floor, a heater in the said pit, a drum around the heater having an upper open end below the charging floor, and means for admitting air to the lower portion of the drum.

15,157. RELIEVING-LATHE. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, Hartford, Conn., a Corporation of New Jersey. Filed Feb. 11, 1920. Serial No. 357,831. Original No. 1,299,207, dated Apr. 1, 1919, Serial No. 139,838, filed Dec. 30, 1916. 65 Claims. (Cl. 82—2.)

1. In a relieving lathe, the combination of means for holding and rotating a cutter, a tool holder, means comprising a single-throw cam acting positively to advance the tool holder slowly toward the cutter and acting positively to withdraw it rapidly therefrom a plurality of times during each rotation of the cutter, and means for varying from zero to maximum the extent of advance and withdrawal.

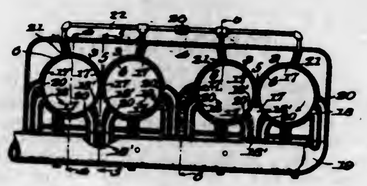
15,158. WAGON-HAYRACK CARRIAGE. JACOB S. MYERS, Hagerstown, Md., assignor to Warren Murray Baechtel and Joseph K. Hoffman, Hagerstown, Md. Filed Mar. 1, 1921. Serial No. 448,850. Original No. 1,296,207, dated Mar. 4, 1919, Serial No. 211,361, filed Jan. 11, 1918. 3 Claims. (Cl. 214—81.5.)



3. A carriage adapted for movement endwise of a wagon rack bed having elevated side rails forming a track and also having rollers below the level of the track; the said carriage being capable of movement endwise of a rack bed

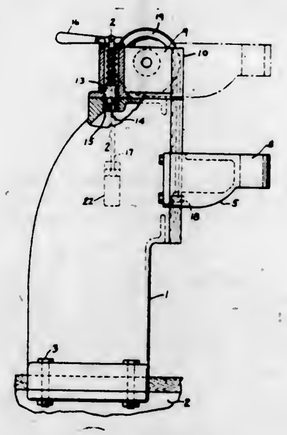
below the level of the rails and being provided with rails to rest and travel upon said rollers and being also provided at its sides with hanger brackets having spaced portions and adapted to overhang the track rails of the track

bed, with transverse rollers carried between the said spaced portions of the brackets to travel upon said track rails, and with supporting connections between said hangers and the carriage, said connections being adjustably connected with the carriage and with said brackets.



15,159. PULLEY-ADAPTER. CHARLES F. NICKERSON, Reading, Mass. Filed May 19, 1921. Serial No. 470,906. Original No. 1,371,512, dated Mar. 15, 1921, Serial No. 254,111, filed Sept. 14, 1918. 6 Claims. (Cl. 64—17.)

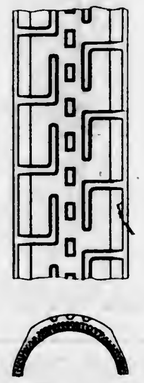
1. For application to a flat belt-engaging pulley, a non-continuous annular adapter, formed internally to embrace the periphery of the pulley, and having separable portions permitting its application to, and its contraction on the pulley, round belt-guiding external flanges, and coupling means carried wholly by the adapter and adjustably connecting said separable portions to clamp the adapter on the pulley, said flanges and coupling means being located at opposite sides of the central zone of the adapter, so that the adapter is rotatable in the bight of a round belt.



15,160. INTERNAL-COMBUSTION ENGINE. ERNEST R. OLSEN, Detroit, Mich., assignor to George William Olsen, Muskegon, Mich. Filed Dec. 15, 1919. Serial No. 345,033. Original No. 1,266,849, dated May 21, 1918, Serial No. 187,196, filed Aug. 20, 1917. 29 Claims. (Cl. 123—25.)

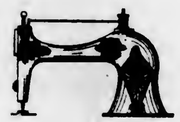
1. In an internal combustion engine, the combination of a plurality of internally shouldered cylinders each provided with pairs of alternating intake ports and exhaust ports and a steam inlet port lying in the same plane, rotatable internal valve members shouldered to coact with the shoulders of said cylinders and disposed to project from the inner ends thereof and provided with worm teeth on their projecting ends, said valve members being provided with three uniformly spaced valve ports lying in the plane of said cylinder ports and adapted to be brought into register therewith as the valve members rotate, the pairs of cylinder intake and exhaust ports being spaced uniformly

with said valve ports, the steam ports of the cylinders being positioned so that one of the valve member ports register therewith during each intake stroke, steam delivery connections to said steam inlet ports, pistons reciprocating in said valve members, a crank shaft, a worm shaft provided with worms coacting with the worm gears of said valve members, and driving connections between said worm and crank shafts.



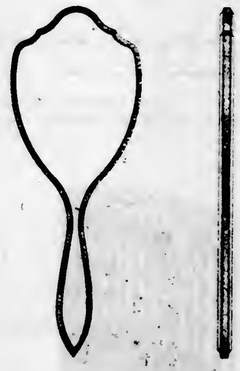
15,161. SPINDLE-SUPPORTING MEMBER. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed May 14, 1921. Serial No. 469,569. Original No. 1,304,643, dated May 27, 1919. Serial No. 172,489, filed June 2, 1917. 13 Claims. (Cl. 90—19.)

1. A machine-tool combining a bed; a box-type member uprising therefrom column-like; a second member extending arm-like transversely thereto and adapted to carry a spindle at its end; an element in the nature of an intermediary pivoted to one of said parts and having a slideway-connection with the other of said parts; locking means for normally preventing pivotal action but adapted to be released to enable the arm-like member to be swung to one side of the other member; and a clamping means for engaging slideways on said box-type member, whereby the arm-like member may be rigidly secured against vibration relative to the box-type member.



DESIGNS.

58,419. TIRE. JOHN M. ALDERFER, Akron, Ohio. Filed Dec. 17, 1920. Serial No. 431,495. Term of patent 14 years.



The ornamental design for a tire as shown.

58,420. SEWING-MACHINE ARM. BRONISLAW AMBROSIEWICZ, Hamtramck, Mich. Filed July 9, 1920. Serial No. 395,152. Term of patent 14 years.

The design for a booth as herein shown and described.

58,424. RADIATOR. LOUIS COURTOT, Paris, France. Filed Aug. 30, 1919. Serial No. 320,955. Term of patent 14 years.

The ornamental design for a radiator, as shown.

58,425. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,762. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,426. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,763. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,427. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,764. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,428. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,765. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,429. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,766. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,430. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,767. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,431. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,768. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,432. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,769. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

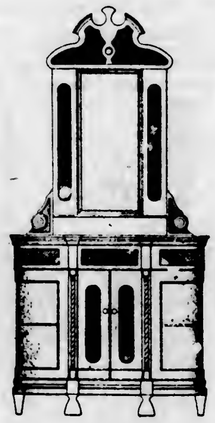
58,433. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,770. Term of patent 7 years.

The ornamental design for a pen and pencil holder as shown.

58,434. PEN AND PENCIL HOLDER. OSCAR B. FISH, St. George, N. Y. Filed Feb. 2, 1920. Serial No. 355,771. Term of patent 7 years.

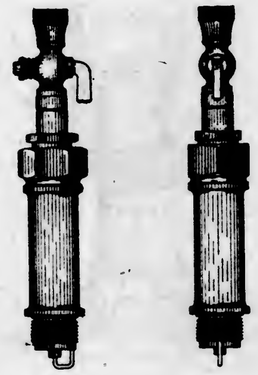
The ornamental design for a pen and pencil holder as shown.

58,435. ADVERTISING SIGN OR SIMILAR ARTICLE. LOUIS GICLAS, Washington, D. C. Filed Dec. 29, 1920. Serial No. 433,952. Term of patent 14 years.



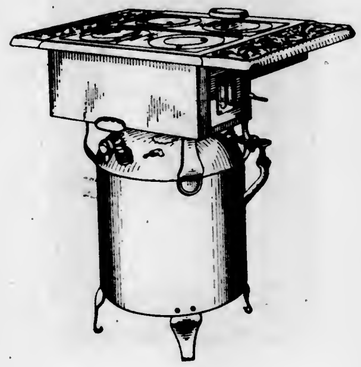
The ornamental design for an advertising sign, or similar article as shown.

58,436. EMBLEM BUTTON. CLARENCE B. GORE, Chicago, Ill. Filed July 12, 1920. Serial No. 395,777. Term of patent 14 years.



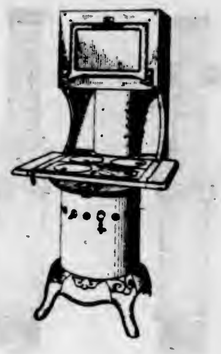
The ornamental design for an emblem button, as shown.

58,437. PHONOGRAPH-CABINET. GIOVONNI RICCI GRAMITTO, Rochester, N. Y. Filed Apr. 22, 1921. Serial No. 463,682. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

58,438. SPARK-PLUG. PATRICK J. GRIFFIN, Boston, Mass. Filed Feb. 3, 1921. Serial No. 442,297. Term of patent 7 years.

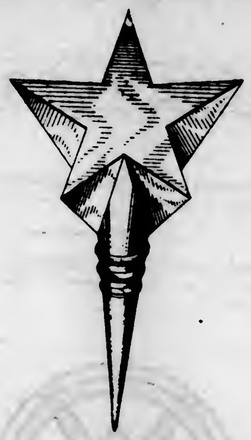


The ornamental design for a spark plug, as shown.

58,439. OIL-STOVE. EDWIN E. HILLIKER, East Aurora, N. Y. Filed Dec. 24, 1919. Serial No. 347,233. Term of patent 3½ years.

The ornamental design for an oil stove, as shown.

58,440. OIL-STOVE. EDWIN E. HILLIKER, East Aurora, N. Y. Filed Dec. 24, 1919. Serial No. 347,234. Term of patent 3½ years.



The ornamental design for an oil stove, as shown.

58,441. EMBLEM. VEDER JACOBSEN, Chicago, Ill. Filed Jan. 29, 1918. Serial No. 214,430. Term of patent 3½ years.

The ornamental design or an emblem, as shown.

Ser. No. 138,796. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WISCONSIN BUTTER & CHEESE CO., Elkhorn, Wis. Filed Oct. 25, 1920.

ELKO

Particular description of goods.—A Compound Milk.
Claims use since Oct. 2, 1920.

Ser. No. 138,956. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GEORGE W. PFOTT CO., Chicago, Ill. Filed Oct. 29, 1920.

Consists of the combinations of the words as shown to form a circular design, having half of the background red.
Particular description of goods.—Certain Parts of Machinery.
Claims use since July 30, 1917.

Ser. No. 139,267. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VICTOR HALPER, New York, N. Y. Filed Nov. 6, 1920.

TESTOGAN

Particular description of goods.—A Medicinal Preparation Indicated as a Specific for Insufficiency of the Hormones of the Reproductive Glands and the Glands of Internal Secretion, Eunuchoidism, Climacterium, Virile Neurasthenia, Hypochondria, and other Conditions of Physical and Nervous Debility.
Claims use since about Mar. 10, 1920.

Ser. No. 139,268. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VICTOR HALPER, New York, N. Y. Filed Nov. 6, 1920.

THELYGAN

Particular description of goods.—A Medicinal Preparation Indicated as a Specific for Insufficiency of the Hormones of the Reproductive Glands and the Glands of Internal Secretion, Climacteric Systems, Amenorrhea, Neurasthenia, Hypochondria, Dysmenorrhea, and other Conditions of Physical and Nervous Debility.
Claims use since Mar. 10, 1920.

Ser. No. 139,287. (CLASS 39. CLOTHING.) HYMAN M. KASS, New York, N. Y. Filed Nov. 6, 1920.

GLOBE

Particular description of goods.—Collars and Cuffs.
Claims use since May 15, 1920.

Ser. No. 139,476. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FREDERICK E. RICHARDSON, New York, N. Y. Filed Nov. 10, 1920.

"Richo"

Particular description of goods.—Ice-Cream Powder and Meringue-Powder.
Claims use since Apr. 1, 1920.

Ser. No. 139,528. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LESS-KOAL MANUFACTURING COMPANY, Boston, Mass. Filed Nov. 11, 1920.

LESS-KOAL

Particular description of goods.—A Powdered Composition to be Dissolved in Water and Sprinkled Over Coal to Facilitate Combustion.
Claims use since Oct. 25, 1920.

Ser. No. 139,547. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) E. S. NOYES COMPANY, Weeks Mills, Me. Filed Nov. 11, 1920.

GARDEN-SIDE

Particular description of goods.—Canned Vegetables.
Claims use since Oct. 29, 1920.

Ser. No. 139,569. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COMMERCIAL UNION OF AMERICA, INCORPORATED, New York, N. Y. Filed Nov. 12, 1920.

STAMBOUL

Exclusive right to use of the word "Stamboul" apart from the mark shown on the drawing is disclaimed.
Particular description of goods.—Wheat-Flour.
Claims use since May 20, 1920.

Ser. No. 139,577. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE ELECTRIC MACHINE COMPANY, Indianapolis, Ind. Filed Nov. 12, 1920.

ELMCo

Particular description of goods.—Stands for Testing Starting-Motors and Electric Generators, and Growlers for Testing Armatures.
Claims use since Oct. 1, 1920.

Ser. No. 139,631. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILL B. ROBINSON, M. D., Mount Gilead, Ohio. Filed Nov. 13, 1920. Under ten-year proviso.

NATHAN TUCKER M.D.
SPECIFIC

Particular description of goods.—A Medicinal Preparation for Asthma, Hay-Fever, and all Catarrhal Diseases of the Respiratory Organs.
Claims use since Feb. 3, 1891.

Ser. No. 139,758. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Nov. 17, 1920.

The pictures shown being fanciful.
Particular description of goods.—Chambray in the Piece.
Claims use since Sept. 24, 1920.

Ser. No. 140,005. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AUTOMATIC FUEL SAVING CO., Wilmington, Del. Filed Nov. 23, 1920.

AUTOMATIC FUEL SAVING CO.
AUTOMATIC
COMBUSTION CONTROL
GRAY SYSTEM

No claim being made to the words "Automatic Fuel Saving Co.," "Automatic Combustion Control," "Saves Coal," and "Gray System" apart from the mark shown by the drawing.
Particular description of goods.—Compressed-Air Systems of Automatic Combustion Control for Steam-Boilers.
Claims use since Oct. 26, 1920.

Ser. No. 140,209. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) REPUBLIC MATCH COMPANY, Chicago, Ill. Filed Nov. 26, 1920.

No claim is made to the words, "Made in U. S. A. By" and "Impregnated Safety Match" apart from the mark shown in the drawing illustrating the trade-mark.
Particular description of goods.—Impregnated Matches.
Claims use since Nov. 1, 1920.

Ser. No. 140,262. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920.

Particular description of goods.—Tickings, Piece Goods—Namely, Denims and Cheviots.
Claims use since 1918.

Ser. No. 140,405. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) HENRY PAULSON, Chicago, Ill. Filed Nov. 29, 1920.

MERITAS

Consisting of the word "Meritas."
Particular description of goods.—Spectacle-Frames, Eyeglass-Frames.
Claims use since Feb. 15, 1904.

Ser. No. 140,482. (CLASS 17. TOBACCO PRODUCTS.) BAYUK BROS., INCORPORATED, Baltimore, Md., and Philadelphia, Pa. Filed Dec. 1, 1920.

HAVANA RIBBON

Particular description of goods.—Cigars, Cigarettes, Chewing-Tobacco, and Smoking-Tobacco.

Particular description of goods.—Chewing-Gum.
Claims use since Dec. 3, 1920.

Ser. No. 140,961. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PHENIX CHEESE CO., New York, N. Y. Filed Dec. 11, 1920.

Particular description of goods.—Milk-Sugar.
Claims use since Nov. 1, 1920.

Ser. No. 140,978. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN BISCUIT COMPANY, San Francisco, Calif. Filed Dec. 13, 1920.

FIESTA

Particular description of goods.—Sugar Wafers in Cake Form and Cakes.
Claims use since December, 1907.

Ser. No. 141,080. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) GEORGE J. QUINN & COMPANY, INC., New York, N. Y. Filed Dec. 14, 1920.

No claim being made to the words "Worsted Jersey."
Particular description of goods.—Various Lines of Piece Goods—Namely, Silk, Silk and Cotton, Cotton, Woolen, and Worsteds.
Claims use since Oct. 20, 1920.

Ser. No. 141,184. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Dr. B. E. NEAL MEDICINE COMPANY, San Francisco, Calif. Filed Dec. 16, 1920.

Neal-Tone

Particular description of goods.—A General Tonic in Tablet or Pill Form.
Claims use since Feb. 18, 1920.

Ser. No. 141,375. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) THE INDEPENDENT BREWERIES COMPANY, St. Louis, Mo. Filed Dec. 21, 1920.

A·B·C·

Particular description of goods.—A Cereal Malt Beverage Containing Less Than One-Half of One Per Cent. of Alcohol, by Volume, and Sold as a Soft Drink.
Claims use since Jan. 6, 1920.

Ser. No. 141,733. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS NOT INCLUDING ELECTRICAL APPARATUS.) FRANK PFEIFER and BERNARD R. PFEIFER, Fargo, N. D. Filed Dec. 31, 1920.

Particular description of goods.—A Retort for Producing Gas, Tar, and Creosote from Straw and other Vegetable Materials.
Claims use since Mar. 11, 1920.

Ser. No. 141,829. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SIMMONS L. CREEK, Birmingham, Ala. Filed Jan. 4, 1921.

ZEPHYR

Particular description of goods.—Toilet Preparations—Namely, Toilet Cream, Vanishing Cream, Cleansing-Cream, and Shampoo.
Claims use since August, 1917.

Ser. No. 141,892. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) ATLAS TRUCK CORPORATION, York, Pa. Filed Jan. 6, 1921.

ATLAS WORM DRIVE "MERCHANTS' DISPATCH"

No exclusive claim is made to the words "Worm Drive" and "Merchants' Despatch" apart from the mark herein shown.
Particular description of goods.—Motor-Trucks.
Claims use since May 15, 1920.

Ser. No. 141,965. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES E. CESSNA, Chicago, Ill. Filed Jan. 8, 1921.

BONITA

Particular description of goods.—Eye-Waters or Eye-Lotions and Antiseptic and Healing Ointments.
Claims use since Apr. 1, 1920.

Ser. No. 142,017. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE HOBART MANUFACTURING COMPANY, Troy, Ohio. Filed Jan. 10, 1921.

Aroma

Particular description of goods.—Machines for Roasting Food Products.
Claims use since December, 1920.

Ser. No. 142,060. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE HODGSON PUMP COMPANY, LIMITED, Bamber Bridge, near Preston, England. Filed Jan. 11, 1921.

SUNTURBO

Particular description of goods.—Machine-Pumps.
Claims use since Nov. 21, 1913.

Ser. No. 142,078. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) J. W. IBBERSON, Sheffield, England. Filed Jan. 11, 1921.

BACKBONE

Particular description of goods.—Piece Goods Manufactured from or Consisting of Linen, Cotton, Hemps, Silks, or Wool, Used in Making Coat-Fronts.
Claims use since May, 1920.

Ser. No. 142,853. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DAVID ROBINSON, Brooklyn, N. Y. Filed Jan. 27, 1921.

BUFFALO
BEST BY TEST
AMMONIA

No claim being made to the exclusive use of the words "Best by Test" and "Ammonia" apart from the mark as shown on the drawing.
Particular description of goods.—Ammonia.
Claims use since April, 1896.

Ser. No. 142,881. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FOAMITE FIREFOAM COMPANY, New York, N. Y. Filed Jan. 28, 1921.

ALLWEATHER

Particular description of goods. — Fire-Extinguishing Compounds.
Claims use since Dec. 1, 1920.

Ser. No. 142,944. (CLASS 39. CLOTHING.) JACOB STEIN, New York, N. Y. Filed Jan. 29, 1921.

PRESTO

Consisting of the word "Presto."
Particular description of goods.—Baby-Pants and Aprons.
Claims use since Nov. 20, 1920.

Ser. No. 142,996. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NEUSS, HESSLEIN & CO. INC., New York, N. Y. Filed Jan. 31, 1921.

CRUSADER

Particular description of goods.—Woven Cotton Piece Goods.
Claims use since July, 1919.

Ser. No. 143,159. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CANTOL WAX COMPANY, San Antonio, Tex. Filed Feb. 4, 1921.

APIMELA

Particular description of goods.—A Beeswax Substitute.
Claims use since 1914.

Ser. No. 143,193. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) U. S. INDUSTRIAL ALCOHOL CO., New York, N. Y. Filed Feb. 4, 1921.

ALCORUB

Particular description of goods.—Composition Containing Alcohol for Bathing, Massage, and other External Uses.
Claims use since Feb. 3, 1921.

Ser. No. 143,194. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) U. S. INDUSTRIAL ALCOHOL CO., New York, N. Y. Filed Feb. 4, 1921.

ALCORUB

Particular description of goods.—Composition Containing Alcohol for Bathing and Massage and other External Uses.
Claims use since Feb. 3, 1921.

Ser. No. 143,205. (CLASS 12. CONSTRUCTION MATERIALS.) CHICAGO FIRE BRICK CO., Chicago, Ill. Filed Feb. 5, 1921.

C

"C" in circles.
Particular description of goods.—Fire-Brick, Flue-Lining, Well-Coping, Brick Drain-Tile, Clay Sewer-Pipes, Portland Cement, Lime, Hollow Tile, Clay Tile, Metal Lath, Wooden Lath, and Plaster.
Claims use since Jan. 1, 1921.

Ser. No. 143,214. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) KATZENBACH & BULLOCK CO., New York, N. Y. Filed Feb. 5, 1921.

Particular description of goods.—Acetone, Acetic Acid, Alum, Alumina Sulfate, Ammonia Carbonate, Ammonia Chlorid, Ammonia Nitrate, Ammonia Phosphate, Ammonia Sulfate, Amyl Acetate, Amyl Alcohol, Anhydrous Ammonia, Anilin Salts, Antimony Salts, Aqua Ammonia, Aqua-Fortis Acid, Barium Binoxid, Barium Carbonate, Barium Chlorid, Barium Peroxid, Barium Sulfate, Battery-Acid, Benzol, Bleaching-Powder, Blue Vitriol, Boracic Acid, Borax, Calcium Chlorid, Carbolic Acid, Carbon Bisulfid, Carbon Tetra Chlorid, Cobalt Sulfate, Copperas, Cresol, Creosote, Epsom Salts, Formic Acid, Formaldehyde, Glauber Salt, Glycerin, Hydrochloric Acid, Hydrofluoric Acid, Iron Liquor, Iron Perchlorid, Iron Nitrate, Iron Sulfate, Lead Acetate, Lead Arsenate, Lead Nitrate, Lead Oxid, Lye, Magnesia, Magnesite, Magnesium Carbonate, Magnesium Oxid, Magnesium Chlorid, Mixed Acid, Nickel

Oxid, Nickel Salts, Nitric Acid, Oxalic Acid, Paris Green, Phosphoric Acid, Phosphorus, Picric Acid, Potash Bichromate, Potash Binoxalate, Potash Caustic, Potash Carbonate, Potash Cyanid, Potash Nitrate, Potash Permanganate, Potash Prussiate, Pyroligneous Acid, Red Arsenic, Sal-Ammoniac, Sal-Soda, Soda Acetate, Soda-Ash, Soda Bicarbonate, Soda Bichromate, Soda Bisulfite, Soda Carbonate, Soda Caustic, Soda Crystals, Soda Hyposulfite,

K&B

Soda Nitrate, Soda Nitrite, Soda Phosphate, Soda Prussiate, Soda Silicate, Soda Sulfate, Soda Sulfid, Soda Sulfite, Stearic Acid, Sulfur, Sulfuric Acid, Sulfurous Acid, Tin Crystals, Tin Oxid, Titanium Potassium Oxalate, Toluol, White Arsenic, Zinc Chlorid, Zinc Sulfate, Zinc Stearate, Beta Naphthol, Alphanaphthylamin, Dimethylanilin, Hexamethylenetetramin.
Claims use since June, 1910.

Ser. No. 143,267. (CLASS 39. CLOTHING.) HUNTINGTON SHOE AND LEATHER COMPANY, Huntington, Ind. Filed Feb. 7, 1921.

THE CO-WORKER SHOE

No exclusive right is claimed to the use of the word "Shoe" except in connection with the other features of the mark.
Particular description of goods.—Boots and Shoes of Leather, Skins, Hides, or Partly of Leather, Skins, and Hides and Cloth.
Claims use since Jan. 1, 1921.

Ser. No. 143,372. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) WESTERN INDUSTRIES CO., San Francisco, Calif. Filed Feb. 9, 1921.

WICO

Particular description of goods.—Ethyl Alcohol.
Claims use since June 28, 1920.

Ser. No. 143,400. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PRONTIC DRUGGISTS INC., Baltimore, Md. Filed Feb. 10, 1921.

PRONTO

Particular description of goods.—Bromics, for Headache, Nervousness, Nervous Exhaustion, and Mental Depression; Cold and Grippe Tablets, for Colds, La Grippe, and Influenza; Digestives, for Indigestion, Constipation, and for Elimination of Food-Poisons Accumulated in the Lower Bowel; Indigestion Tablets, for Chronic Constipation and Indigestion; Laxative Aspirin, for the Pain of Headache, Colds, Aching Joints, Lumbago, Rheumatism, Neuralgia, Sciatica, Toothache, Earache, the Menstrual Period; Little Liver Pills, for a Torpid Liver, for the Elimination of Poisons from the Body Which Would Otherwise Find Their Way in the Blood Stream, and for Eliminating Waste Matter of the Body; Kidney and Bladder Pills, for the Kidneys and Liver, for Eliminating Waste Products of the Body, and for the Purpose of Flushing the Kidneys and Restoring the Urine to Its Healthy Quantity, Color, and Non-Irritating Condition; Blood and Nerve Tonic, for Restoring to the Blood Those Elements Which Have Become Missing, Occasioned by Sickness or Run-Down Condition, Restoring Artificially Before the Body Can Become Strong Enough to Extract Certain Elements from Food in Necessary Quantities to Even Up the Exhausted Supply; Hair-Tonic, for Treatment of the Scalp for the Prevention of Dandruff; Liniment, for Rheumatic, Neuralgic, and All Localized Pains, for Sprains, Stiffened Muscles and Joints, Bruises, Painful Swellings, Frost-Bites, Stings of Insects, Muscular Fatigue, Sore and Tired Feet; Soothing Skin-Ointment, for Eczema and Kindred Skin Diseases, for Skin Irritations, Burns, Scalds, Chafes, Insect Stings and Bites, Rashes, Pimples, Boils, Minor Wounds, and Abrasions of the Skin; Healing Cold-Cream, for Chafing of Infants or Stout People, for Sunburn, Windburn, Chapped Hands or Face, Redness, Pimples, Rashes, Burns, or Scalds; Antiseptic, for Cuts, Wounds, and Open Sores; Corn-Remover, for Removing Corns and Callous Skin; Tonic Restorative, a Blood-Tonic for Building Up the Blood After Hard Physical or Mental Strain or After an Exhausting Illness, Such as Influenza and Typhoid or Other Fevers; Rheumatic Relief, a Liniment for Rubbing All Localized Pains; Headache-Seltzer, for Headache; Toothache Relief, for Toothache; Fruit Phosphate, for Flushing Sluggish or Diseased Kidneys.
Claims use since on or about Feb. 1, 1921.

Ser. No. 143,470. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Feb. 12, 1921.

JAC-LIN

Particular description of goods.—Perfume.
Claims use since Jan. 10, 1921.

Ser. No. 143,471. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Feb. 12, 1921.

ACTA SENTALIS

Particular description of goods.—A Skin-Lotion.
Claims use since Jan. 27, 1921.

Ser. No. 143,492. (CLASS 39. CLOTHING.) SOLOMON GARDE, Seattle, Wash. Filed Feb. 12, 1921.

POLLY ANNA

That portion of the mark shaded in the drawing indicates a red color.
Particular description of goods.—Ladies' Aprons and House-Dresses.
Claims use since Jan. 1, 1918.

Ser. No. 143,518. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SODERSEINE COMPANY OF NORTH AMERICA, Wilmington, Del., and Brooklyn, N. Y. Filed Feb. 12, 1921.

Soderseine

Particular description of goods.—Hair-Tonic, Shampoo Compound, Pressing-Oil, Hair-Grower, Eczema-Salve, and Compound for Treating Dandruff.
Claims use since March, 1913.

144,989. (CLASS 39. CLOTHING.) BOURN RUBBER CO., Providence, R. I. Filed Apr. 9, 1919. Serial No. 117,292.

Covd.

Particular description of goods.—Rubber Boots and Shoes.
Claims use since Jan. 27, 1919.

144,990. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COLGATE & CO., Jersey City, N. J., and New York, N. Y. Filed Dec. 29, 1920. Serial No. 141,627.

QUINOL

Particular description of goods.—Hair-Tonics.
Claims use since Sept. 1, 1900.

144,991. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CALDWELL IMPORTING CO., Minneapolis, Minn. Filed Apr. 2, 1921. Serial No. 145,603.

GOLD MEDAL

Particular description of goods.—Coffee.
Claims use since Jan. 1, 1917.

144,992. (CLASS 39. CLOTHING.) COULTER DRY GOODS COMPANY, Los Angeles, Calif. Filed July 22, 1920. Serial No. 135,260.

Loraine

Particular description of goods.—Leather Gloves for Men and Women.
Claims use since May 13, 1920.

144,993. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE DOSS RUBBER & TUBE CO., INC., Atlanta, Ga. Filed Feb. 17, 1919. Serial No. 115,905.

Particular description of goods.—Rubber Tires.
Claims use since Dec. 31, 1918.

144,994. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE DOSS RUBBER & TUBE CO., INC., Atlanta, Ga. Filed Feb. 17, 1919. Serial No. 115,906.

Particular description of goods.—Rubber Tires.
Claims use since Dec. 31, 1918.

144,995. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE DOSS RUBBER & TUBE CO., INC., Atlanta, Ga. Filed Feb. 17, 1919. Serial No. 115,907.

DOSS

Particular description of goods.—Rubber Tires.
Claims use since Dec. 31, 1918.

144,996. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) WALTER D. ELMORE, Pittsburgh, Pa. Filed Apr. 4, 1921. Serial No. 145,676.

Elmore

Particular description of goods.—Antifriction Metals.
Claims use since Feb. 1, 1915.

144,997. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE GRAFF FURNACE CO., New York, N. Y. Filed Feb. 23, 1921. Serial No. 143,922.

FAULTLESS-COMFORT

Particular description of goods.—Warm-Air, Coal, Wood, Gas, and Oil Furnaces and Cooking-Ranges.
Claims use since 1910.

144,998. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE GRAFF FURNACE CO., New York, N. Y. Filed Feb. 23, 1921. Serial No. 143,924.

FAULTLESS
SCIENTIFIC

Particular description of goods.—Warm-Air, Coal, Wood, Gas, and Oil Furnaces and Cooking-Ranges.
Claims use since 1906.

144,999. (CLASS 37. PAPER AND STATIONERY.) THE HALL LITHOGRAPHING CO., Topeka, Kans. Filed Feb. 3, 1921. Serial No. 143,125

THE HALL MARK OF QUALITY
HALL TOPEKA

Particular description of goods.—Rubber Bands, Loose-Leaf Binders, and Lead-Pencils.
Claims use since Jan. 1, 1916.

145,000. (CLASS 2. RECEPTACLES.) MONO-SERVICE CO., Newark, N. J. Filed Sept. 7, 1920. Serial No. 136,900.

KLEEN KUP

Particular description of goods.—Composition Containers for Food Products—Namely, Wood-Fiber Containers of the Tumbler and Tub Shaped Type.
Claims use since October, 1911.

145,001. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARTIN LUTHER MOORE, Memphis, Tenn. Filed Jan. 20, 1921. Serial No. 142,507.

MOORE'S

Particular description of goods.—General Tonics; Tonics for Use in Purifying the Blood, Strengthening the Nerves, Building Up Vitality; Tonics for Use in Treating Constipation, Indigestion, the Kidneys, and Pellagra; Tonics for Use in the Treatment of Tuberculosis, Bronchitis, Catarrh, Asthma, Coughs, and Colds; Liniments for the Treatment of Wind-Colic, Muscular Cramp, Bronchial Cough, Spasmodic Croup, Acute Pleurisy, Skin Irritations, Muscular Rheumatism, Lumbago, Stiff Neck, Neuralgic Headaches, Neuralgia, Bruises, and Insect Bites and Stings.
Claims use since 1914.

145,002. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NAUMKEAG STEAM COTTON CO., Salem, Mass. Filed Apr. 7, 1921. Serial No. 145,850.

SALEM

Particular description of goods.—Sheets, Pillow-Cases, and Cotton Piece Goods.
Claims use since 1900.

145,003. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PACIFIC CHEMICAL COMPANY, Los Angeles, Calif. Filed Dec. 30, 1920. Serial No. 141,690.

PRONTO

Particular description of goods.—Chemical Drain Opener and Cleaner.
Claims use since Feb. 24, 1920.

145,004. (CLASS 38. PRINTS AND PUBLICATIONS.) A. I. RANDALL, INC., Rockland, Mass. Filed Nov. 9, 1920. Serial No. 139,430.

A. I. Randall Inc

Particular description of goods.—Catalogues, Booklets, Price-Lists, and Pamphlets.
Claims use since Apr. 1, 1920.

145,005. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE READE M'F'G CO., Jersey City, N. J. Filed Jan. 8, 1921. Serial No. 141,996.

INCOMPARABLE

Particular description of goods.—Soldering Fluids, Soldering-Paste, Soldering-Salts, Tinning Solution, and Soldering-Flux.
Claims use since 1888.

145,006. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) J. E. RHOADS & SONS, Philadelphia, Pa., and Wilmington, Del. Filed Jan. 31, 1921. Serial No. 143,013.

POWER

Particular description of goods.—Flat Leather Belting.
Claims use since about Feb. 1, 1909.

145,007. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) SERVICE AUTO EQUIPMENT CORPORATION, Kansas City, Mo. Filed Oct. 2, 1917. Serial No. 106,562.

SERVICE

Particular description of goods.—Outer Tubes or Shoes for Pneumatic Tires.
Claims use since Apr. 1, 1917.

145,008. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARVIN L. SEWELL, Lavonia, Ga. Filed Feb. 17, 1920. Serial No. 128,524.

"EASY-TEETHER"

Particular description of goods.—A Preparation for Teething of Infants, Liver, Kidneys, Glands, Stomach, and Bowel Diseases, Colic, Cholera Infantum, Hives, Colds, and Worms.
Claims use since Jan. 7, 1920.

145,009. (CLASS 11. INKS AND INKING MATERIALS.) G. SIEGLE COMPANY, Rosebank, Staten Island, N. Y. Filed Feb. 11, 1919. Serial No. 115,788.

Bengal

Particular description of goods.—Colors Used in Ink for Printing and Lithographing.
Claims use since about 1910.

145,010. (CLASS 11. INKS AND INKING MATERIALS.) G. SIEGLE COMPANY, Rosebank, Staten Island, N. Y. Filed Feb. 11, 1919. Serial No. 115,790.

Topaz

Particular description of goods.—Colors Used in Ink for Printing and Lithographing.
Claims use since about 1910.

145,011. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SMITH, HOGG & CO., New York, N. Y. Filed May 20, 1921. Serial No. 147,997.

LEHIGH

The trade-mark is stamped in blue.
Particular description of goods.—Cotton Goods in the Piece.
Claims use since 1910.

145,012. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SMITH, HOGG & CO., New York, N. Y. Filed May 20, 1921. Serial No. 147,998.

MICHIGAN

The trade-mark is stamped in blue.
Particular description of goods.—Cotton Goods in the Piece.
Claims use since 1910.

145,013. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE SOUTHERN COTTON OIL COMPANY, Jersey City and Bayonne, N. J.; New York, N. Y.; Gretna, La.; Savannah, Ga., and Chicago, Ill. Filed Apr. 12, 1921. Serial No. 146,091.

Wesson

Particular description of goods.—Prepared Fatty Oleaginous or Unctuous Food Substance.
Claims use since about June, 1899.

145,014. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SPENCER KELLOGG & SONS, INC., Buffalo, N. Y. Filed Dec. 6, 1920. Serial No. 140,660.

KELLOGG'S TASTELESS CASTOR OIL

Particular description of goods.—Castor-Oil.
Claims use since December, 1914.

145,015. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) STANDARD VENTILATOR COMPANY, Lewisburg, Pa. Filed May 11, 1921. Serial No. 147,574.

STANDARD

Particular description of goods.—Ventilators and Chimney-Caps.
Claims use since Sept. 15, 1909.

145,016. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LILLIAN E. A. STROUD, Philadelphia, Pa. Filed Dec. 2, 1920. Serial No. 140,552.

STROUD'S

Particular description of goods.—Shampooing Preparation.
Claims use since 1907.

145,017. (CLASS 37. PAPER AND STATIONERY.) F. A. TOOMBS & CO., Brooklyn, N. Y. Filed Feb. 25, 1921. Serial No. 144,055.

Pictorial Log

Particular description of goods.—Photograph-Albums.
Claims use since July, 1915.

145,018. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) UNITED STATES TIRE COMPANY, New York, N. Y. Filed Apr. 30, 1921. Serial No. 147,066.

CHAIN TREAD

Particular description of goods.—Rubber Vehicle-Tires.
Claims use since Nov. 21, 1913.

145,019. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) WHITE FLAME LIGHT CO., Grand Rapids, Mich. Filed May 4, 1921. Serial No. 147,224.

White Light

Particular description of goods.—Lamp-Burners.
Claims use since 1916.

145,020. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) WICHITA MOTORS COMPANY, Wichita Falls, Tex. Filed Apr. 29, 1920. Serial No. 131,845.

Particular description of goods.—Motor-Trucks.
Claims use since Jan. 2, 1918.

145,021. (CLASS 39. CLOTHING.) THE WILSON RUBBER COMPANY, Canton, Ohio. Filed Nov. 11, 1920. Serial No. 139,537.

LO-TEST

Particular description of goods.—Rubber Gloves.
Claims use since Jan. 1, 1917.

145,022. (CLASS 39. CLOTHING.) THE WILSON RUBBER COMPANY, Canton, Ohio. Filed Nov. 11, 1920. Serial No. 139,556.

PURITEE

Particular description of goods.—Rubber Gloves.
Claims use since Jan. 1, 1917.

145,023. (CLASS 39. CLOTHING.) THE WILSON RUBBER COMPANY, Canton, Ohio. Filed Nov. 11, 1920. Serial No. 139,558.

HI-TEST

Particular description of goods.—Rubber Gloves.
Claims use since Jan. 1, 1917.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

WEBER ELECTRIC COMPANY *v.* E. H. FREEMAN ELECTRIC COMPANY.

Decided June 6, 1921.

1. PATENTS — INFRINGEMENT — IDENTITY — DIFFERENT MODES OF OPERATION.
The Weber patent, No. 743,206, for improvements in incandescent-electric-lamp sockets, claim 4, involving a sleeve and cap having provisions for locking against longitudinal movement by a snap action, but which lacks any provision for preventing disengagement by a rotative movement, *Held* not infringed by a device constructed in accordance with Patent No. 927,344, having two similar parts engaged, but not locked, by a longitudinal thrust, the locking being effected by a rotative movement.

2. SAME—CLAIM CONSTRUED IN VIEW OF PRIOR ART AND PROCEEDINGS IN PATENT OFFICE.
The Weber patent, No. 743,206, for improvements in incandescent-electric-lamp sockets, claim 4, the words "telescopically received" and "telescopically applied," in view of the prior art, the file-wrapper and a second patent to the same patentee and others, No. 916,812, *Held* restricted to a direct longitudinal movement or thrust of the sleeve into the cap, which is not infringed by the device or Patent No. 927,344, which locks by a rotary movement.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Third Circuit.

Mr. Charles Neave and *Mr. Frank C. Curtis* for Weber Electric Co.

Mr. Livingston Gifford and *Mr. D. P. Wolhaupter* for E. H. Freeman Electric Co.

Mr. Justice CLARKE delivered the opinion of the Court.

This is a suit for infringement of Letters Patent of the United States, No. 743,206, granted to August Weber, Sr., on November 3, 1903. The district court held claims 1 and 4 valid and infringed, but the circuit court of appeals, while affirming the validity of the claims, reversed the holding that they were infringed. A supposed conflict of this decision as to infringements with one by the Circuit Court of Appeals of the Second Circuit, with respect to the same patent, serves to bring the case here for review on writ of certiorari.

The patent is a simple and, as we shall see, a narrow one. As described in the specification it relates to new and useful improvements in incandescent-electric-lamp sockets, the principal object of which is to provide a simple and effective automatic lock or connection between the sleeve and the cap of such a socket.

Nothing new electrically or in the general form of the cap or sleeve is claimed,—the invention relates solely to the method of fastening the overlapping cap to the sleeve, or, as it is sometimes called, the shell or casing.

The validity of the claims involved is conceded in argument, and, having regard to the disclaimer with respect to claims 2 and 3, which has been filed by the petitioner since the decision by the circuit court of appeals, we regard the issue as now narrowed to the infringement of the fourth claim.

The familiar incandescent lamp consists of a glass bulb, attached to a screw-threaded base, adapted to be screwed into a properly-insulated block, through which the necessary electrical connections are made, and which is inclosed by a cylindrical "sleeve" of sheet metal. In order to complete the lamp this detached sleeve supporting the bulb and inclosing the insulated block must be fitted and securely fastened into the usual cap, which is attached to the wall or fixture, for if the fastening should become loose, the light might fail, or the bulb fall, or a fire hazard be created. To invent a device by which the sleeve and cap should be easily and securely attached to each other and yet be readily detached when desired, was the problem to which the patentee addressed himself, and his solution of it is thus described in the fourth claim of the patent:

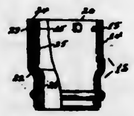
> In a device of the class described, and in combination a pair of members comprising a sheet metal sleeve having a slotted end, and a sheet metal cap adapted to telescopically receive the slotted end of said sleeve, one of said members being provided with a recess, and the other having a correspondingly located *transverse slit and the wall on one side thereof displaced to form a* projection beveled or inclined toward said recessed member and terminating abruptly *at said slit*, whereby said members are adapted to automatically interlock with a snap action when telescopically applied to each other, and to be released by *manual* compression of said slotted sleeve, substantially as described.

To make the device thus described, it was only necessary to cut two transverse slits, each about one-quarter of an inch in length, in opposite sides of the flange of an ordinary cap, and to then, with a punch or die, force outward the upper edges or walls of the slits to the extent desired to create the necessary "recesses" which must "terminate" at the lower, sharp edges of the slits. A similar operation on a slotted sleeve would produce a similar result, but when viewed from the outer surface of

the sleeve the recesses would become the projections of the quoted fourth claim. When, such sleeve is telescopically applied to—pushed or pressed into—the cap, it is obvious that with the recesses in the cap and the projections in the sleeve properly positioned and of a suitable size, when the projections shall register with the recesses, the resiliency of the metal will cause the two to engage with a snap action and the sharp lower edges of the slots in the cap will then prevent the cap and sleeve from being separated by a longitudinal movement only, until the sleeve shall be manually compressed to release the projections from the recesses.

It is to be noted, for it will be of significance in the interpretation of the claim involved, that it is required that the projections on the sleeve shall be "beveled or inclined toward said recessed member," and in the specification it is provided that the projections shall be—

beveled or inclined from the inner end of the sleeve toward the outer end.



With such construction it would seem plain, even without the exhibits, which show it to be true, that, friction aside, projections so beveled or inclined could readily be released by rotative movement from similarly-shaped recesses without compression of the sleeve.

It was admitted at the bar that sockets made as specified in the patent in suit were never put upon the market, but the record shows that with a feature added which is covered by another patent owned by petitioner, the socket met with large commercial success. This other patent is No. 916,812 and was granted March 30, 1909, to the patentee of the patent in suit and two others, on an application filed July 18, 1904. Figure 8 from the drawings of this patent, showing the cap and sleeve of the petitioner's socket as manufactured by it, will aid in describing the additional "improvement" which it made to the device of the patent in suit and will also be of service in comparing this device with what is claimed to be the infringing socket of the respondent.

Fig. 8.

Fig. 9.

This patent is also for improvements in incandescent-electric-light sockets and contains fourteen claims, of which only the terms of the first need be noticed. It claims as new and useful—

a pair of tubular, sheet metal members, one adapted to telescopically receive the other, having mutually abutting cut-metal edges on the respective members (the slot 19 in the cap and projection 20 in the sleeve), to *prevent relative rotative movement*, and automatically interlocking means *for preventing a telescopic movement of separation* of one member from the other (the recesses 17 in the cap and the projections 15 in the sleeve), said means permitting, without manipulation thereof, the telescopic application of the members to each other.

This language, with slight additions and omissions, not significant, is repeated in claims 3, 13, and 14.

This device for preventing "relative rotative movement" of the cap on the sleeve is the feature which the petitioner added to the socket of the patent in suit before putting it upon the market and it consists, as the figure *supra* shows, in the open slot (19) cut to the edge of the flange of the cap, into which passes the projection on the sleeve (20) when the two are "telescopically applied" to each other. This projection (20) is formed by cutting two longitudinal slits in the sleeve and then pressing outward the narrow strip of metal between them. It is perfectly true, as stated in four of the claims and as asserted with much emphasis in the specification, that this added device effectively prevents any relative rotative movement of the cap and sleeve upon each other.

Coming now to the construction of the respondent, which it is claimed infringes the fourth claim of the patent in suit.

This (respondent's) socket has been manufactured since 1909, under Patent No. 927,344, and it may most readily be described by reference to the following, Fig. 3 of the drawing, which was a part of the specification of the patent.

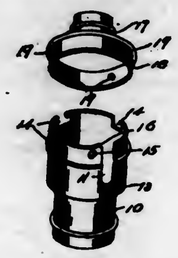


Fig. 3.

It will be seen from this drawing that instead of outwardly extending recesses in the flange of the cap, formed by slits and displacing of the metal, such as are in the petitioner's socket, respondent's cap has four inwardly projecting lugs (19), each of which is a separate piece of metal riveted to the flange. Each of these lugs is circular in outline, with a flat inner end or face and presents abrupt shoulders on opposite sides. In the upper edge of the sleeve are three bayonet-slots of the familiar form (14), so positioned that the studs on the cap may enter them when the sleeve is slipped into the cap. But when the sleeve has been telescoped, or pushed, into the cap so that the lugs have been pressed to the end or bottom of the longitudinal part of the bayonet slots (14) rotation of the sleeve is obviously necessary to bring them into the transverse parts of the slots, so that the two members will be locked against longitudinal separation. (No such rotative movement of the two members is mentioned in

the patent in suit, it is expressly provided against in petitioner's second patent, and it is not possible in its commercial socket.)

This rotative movement accomplishes a second result.

Reference to the figure, *supra*, shows a longitudinal slot in the sleeve, which in the key-socket affords a passage for the key, but in the keyless socket is narrower, and serves only to render the sleeve compressible. To the left of this slot in the sleeve is cut a round hole (15) so positioned that when three of the lugs in the cap are brought by the rotative movement to the ends of the transverse parts of the bayonet-slots the fourth stud will snap into the hole (15). This hole (15) is placed in such a relative position that when the three lugs enter the longitudinal parts of the bayonet slots, the fourth stud rides upon the metal near the edge of the slot in the sleeve, and to facilitate this movement the corner of the slot (16) is bent slightly inward. Thus the adjustment of the studs in the cap is practically a universal adjustment between the cap and shell, so that if any one lug is in position to enter any bayonet-slot two others will be in position to enter the other bayonet-slots and the fourth will be in a position to enter the hole (15) when the sleeve and cap have been so pressed together that the (three other) studs have reached the ends of the longitudinal part of the bayonet-slots and the rotation described of the one upon the other has been completed. A slight compression of the sleeve suffices to release the members when desired.

This description shows that the structural features of the two sockets are strikingly different. Instead of slits and outwardly-extending recesses in the cap of the one there are inwardly-extended studs riveted to the cap of the other. And instead of slits and outward projections of the sleeve to lock by snap action with recesses in the cap against longitudinal movement in the one, there are the bayonet-slots in the sleeve to lock with studs in the cap of the other to accomplish the same result with out snap action. But these different constructions not only differ radically in structural features but they do not function in the same manner, for locking against longitudinal movement in the one is by snap action upon direct longitudinal thrust of the sleeve into the cap, while the other requires first a longitudinal movement or thrust, and then a rotative movement, without which it is entirely ineffective, whereby it locks against longitudinal movement without snap action.

But it is argued that the infringement lies especially in the locking-hole (15) in respondent's socket and the associated lug which operate by snap action and afford a positive lock against rotation of the two members on each other.

The sufficient answer to this is that the patent in suit makes no suggestion of a lock against the rotative movement of the cap and sleeve on each other and contains no disclosure providing for it, but, on the contrary, because the beveled sides which are required by claim 4, for the projections on the sleeve permitted such movement, a subsequently-patented addition was added to prevent it. The petitioner cannot read into the patent in suit the additional slot in the cap and the additional projection on the sleeve of patentee's second patent, and without them there is no lock against rotative movement in the socket of the first patent to be infringed by the stud snapping into the locking-hole of the sleeve of respondent's socket.

This is sufficient to dispose of the case, but we also fully agree with the circuit court of appeals that the prior art, the file-wrapper and the second patent to the same patentee, No. 916,812, *supra*, require that the expressions in the fourth claim "telescopically received" and "telescopically applied" must be restricted to a direct longitudinal movement or thrust of the sleeve into the cap and that for this reason the construction of respondent requiring a rotary movement to render it effective, does not infringe that of the petitioner.

In the application for the patent in suit this fourth claim, originally the seventh, read as we have quoted it omitting the words in italics. In this form it was promptly rejected by the Patent Office on reference to the Oetting patent, No. 642,825, and to the Kenney patent, No. 712,686, and it is clear that the chief concern of the applicant thereafter was to distinguish his construction from that of Kenney, which is very similar to that of respondent. The Kenney socket has lugs in the cap and bayonet-slots in the sleeve, to lock against longitudinal movement, as respondent's socket has, and also slots with open ends and locking-holes similarly placed in the sleeve to lock against rotary movement when the lugs in the cap engage with them. The chief difference between the Kenney and respondent's socket is that in Kenney the lug passes down the slot to a position opposite the locking-hole and then with the rotary movement mounts and rides over the narrow strip of metal—"the bridge"—into the hole, while in the respondent's socket the lugs having plain faces ride on the metal near to the edge of the slot during the longitudinal movement and from that position pass into the locking-holes with the rotative movement.

When his application was rejected by the Patent Office on reference to the Kenney patent thus described, the applicant, without objection or appeal, amended his claim seven (numbering it four) by adding the words in italics and in his explanatory "remarks," when submitting these amendments, it was said:

Claim 4, originally 7, is now *drawn to a specific structure*, having advantages not found in either of the references cited. By transversely slitting the sheet metal shell and displacing the wall on one side of said slit to form a beveled or inclined projection the parts are permitted to be applied to each other *by simply inserting one within the other*, without manually compressing the inner member.

And again—

Kenney's device is adapted to *unlock by simply rotating one member upon another in the same manner that the parts are locked together*, no manual compression of the inner member being necessary.

Thus the patentee, in order to avoid infringing Kenney's construction, voluntarily restricted himself to a "specific structure" operative when the

sleeve was "simply" inserted in the cap, without suggesting any rotary movement whatever, but, on the contrary, by his reference to Kenney as locking and unlocking by "simply rotating one member upon the other," clearly implying that no such rotary movement was necessary in the adjustment of his socket. Having thus narrowed his claim against rotary movement in order to obtain a patent the patentee may not by construction, or by resort to the doctrine of equivalents, give to the claim the larger scope which it might have had without the amendments, which amount to a disclaimer of rotation as an operative feature of his device. (*Shepard* v. *Carrigan*, 116 U. S., 593, 598; *Hubbell* v. *United States*, 179 U. S., 77, 80.)

But that no rotary movement was implied in the use of "telescopically received" and "telescopically applied" in the patent in suit is further unmistakably shown by the frequent use of the same or equivalent expressions in the specification and claims of patentee's later patent, No. 916,812, *supra*, in which claims 1, 3, 13 and 14 relate almost wholly to an improvement which renders rotation of the members one upon the other impossible and which petitioner added to the construction of the patent in suit before putting the sockets upon the market. That the inventor did not intend to claim, and that he certainly did not disclose, that any such rotary movement was necessary in his socket as was required to render the socket of the respondent effective, is, we think, for these reasons, so clear that it is not necessary to consider the dictionary definitions of the words used, upon which the circuit court of appeals, with sound reason, relied in reaching this same conclusion.

For the reasons thus elaborated, we conclude that the socket of the respondent does not infringe the fourth claim of the patent in suit because there is no claim made therein of a lock against rotative movement of the cap and sleeve upon each other, and also because the file-wrapper and the subsequent patent show that the disclosure is, and was intended to be, limited to a construction operative by direct longitudinal movement or thrust without such rotative movement.

The contention, pressed strenuously upon our attention, that the added open slot in the cap and projection on the sleeve provided for in the second patent were devised simply to secure the alinement of the projections and recesses of the first patent in making telescopic application of the two members to each other, is not convincing in the presence of the fact that claims 1, 3, 13 and 14 of the second patent are devoted almost wholly to claiming that this improved construction is intended "to prevent relative rotative movement" of one member upon the other, while only claims 11 and 12 refer, quite incidentally, to what is now claimed to be the chief function of the added parts, that of a guide to the positioning of the recesses and projections of the first patent with reference to each other. Without a guide, the difficulty should not be very great of alining projections and recesses distant from each other but a fraction of an inch when the edges of the cap and sleeve are in contact. The constructions held by the Circuit Court of Appeals of the Second Circuit to infringe the patent in suit, were so essentially different from that of the respondent that we regard discussion of them as quite unnecessary.

It results that the decree of the circuit court of appeals as to claims 1 and 4 must be affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ohio.) The Coey patent, No. 1,019,759, for improvements in skelp-charging apparatus, *Held* anticipated and invalid. *Republic Iron & Steel Co.* v. *Youngstown S. & T. Co.*, 272 Fed. Rep., 386.

(U. S. C. C. A. Ohio.) The Bedell patent, No. 1,012,235, for furnace-charging apparatus, consisting of the combination, with a loading-table and plate-elevating mechanism, of a rotary magnet-wheel, a circular magnetic coil, and means for conducting current to the coil, *Held* valid, but not infringed by a device in which the plates are fed manually and not by the use of any mechanism. *Republic Iron & Steel Co.* v. *Youngstown S. & T. Co.*, 272 Fed. Rep., 386.

(U. S. C. C. A. N. Y.) The Hewitt patents, No. 781,001, claim 1, and 781,002, claim 3, for the means and methods of amplifying variable electric currents by introducing therein an inclosing gas or vapor conducting medium, do not cover an audion-amplifier using the De Forest grid, though a minute quantity of air is left through which the variable current passes, and therefore the owner of those patents is not entitled to royalties on the audion-amplifier used by a licensee who agreed to pay royalties on devices operating in accordance with the patents. *Hewitt* v. *American Telephone & Telegraph Co.*, 272 Fed. Rep., 392.

(U. S. C. C. A. N. Y.) The Hewitt patents, Nos. 1,120,949, claims 1, 7, 11, 13, 18, 19, and 1,121,350, claims 2–4, the essential element of which is a shield charged with an electric potential inserted in a vapor conductor near one electrode for the purpose of resisting the establishment of a current in one direction, and thereby rectifying an alternating current, do not cover an audion-amplifier in which there is a grid alternately charged for the purpose of affecting the electric field between the filament and the plate for the purpose of amplifying a variable current, so that a user of the amplifier is not required to pay royalties to the patentee under a license requiring him to pay such royalties for any device operating in accordance with the patents. *Hewitt* v. *American Telephone & Telegraph Co.*, 272 Fed. Rep., 392.

(U. S. D. C. Mo.) The Luten patents, No. 802,004, for a method of constructing arches, and No. 1,106,880, for falsework used in the support of arches, etc., during construction, *Held* invalid on their face for want of invention or patentable novelty. *Luten* v. *Kansas City Bridge Co.*, 272 Fed. Rep., 533.

Patents Nos. 1,385,351 to 1,385,976.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 288—No. 4. TUESDAY, JULY 26, 1921. Price—$5 per year.
[PUBLISHED AUGUST 8, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of Spanish Laws Recognized.

(Order No. 2,679.)

Department of the Interior,
United States Patent Office,
Washington, D. C., July 21, 1921.

Notice is hereby given that the laws of Spain are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to its subjects.

THOMAS E. ROBERTSON,
Commissioner.

Nolan Act—Reciprocity of Canadian Laws Recognized.

(Order No. 2,681.)

Department of the Interior,
United States Patent Office,
Washington, D. C., July 23, 1921.

Notice is hereby given that the laws of Canada are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to British subjects domiciled in Canada.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

Department of the Interior,
United States Patent Office.
Washington, D. C., July 21, 1921.

Ella Virginia Cameron, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Ralph H. Estabrook, of 10 Lincoln street, Fitchburg, Mass., for registration of a trade-mark and trade-mark registered May 9, 1893, No. 22,996, to Ella Virginia Cameron, of 753 Third avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Ella Virginia Cameron at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Ella Virginia Cameron, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Remittances to the Patent Office.

Checks should be certified. Cash should be registered; if by ordinary mail at risk of sender. Postage stamps not receivable.

TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business July 16, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Feb. 26	Mar. 11	686
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Oct. 18	Dec. 13	1,525
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 18	Nov. 5	719
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Aug. 19	Mar. 16	1,563
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Oct. 1	Dec. 17	754
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Feb. 5	Apr. 18	1,006
312	7. Games and Toys; Optics; Photography; Velocipedes	Feb. 5	Mar. 28	1,469
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Apr. 5	June 3	603
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Oct. 14	June 7	816
295	10. Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Feb. 4	May 4	1,185
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Apr. 1	Apr. 30	381
222	12. Machine Elements	Dec. 1	Apr. 19	1,061
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Oct. 7	Apr. 6	1,580
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Oct. 8	May 27	893
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Aug. 2	Jan. 5	1,631
111	16. Radiant Energy; Telegraphy; Telephony	Sept. 8	Dec. 27	1,498
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Dec. 16	Mar. 24	841
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Oct. 7	Dec. 30	1,624
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 8	Feb. 25	900
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Mar. 1	Mar. 2	1,217
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Nov. 8	Apr. 11	532
249	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Mar. 25	May 4	423
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Nov. 30	Apr. 5	833
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Dec. 27	Apr. 9	877
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	May 12	May 20	260
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Dec. 15	Feb. 15	759
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Feb. 7	Mar. 29	1,159
225	28. Internal-Combustion Engines	Dec. 1	Mar. 2	1,215
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Dec. 27	May 4	723
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Feb. 2	May 19	1,032
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Sept. 1	Nov. 1	2,051
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Sept. 14	Apr. 8	1,117
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Jan. 28	Mar. 11	764
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	May 16	May 27	283
87	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicator Toilet	June 1	June 4	518
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Feb. 25	Feb. 4	1,517
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Jan. 3	Jan 10	2,034
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Walls.	Feb. 12	Feb. 24	1,034
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Sept. 1	Sept. 17	1,768
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 2	Feb. 19	2,072
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Dec. 22	Mar. 26	887
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Oct. 28	Nov. 4	2,068
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Sept. 11	Dec. 31	1,349
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Nov. 22	Apr. 30	516
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Jan. 10	Mar. 24	1,030
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Dec. 16	Feb. 25	965
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Nov. 16	Mar. 1	1,019

Oldest new case, Aug. 2; oldest amended, Sept. 17.
Total number of applications awaiting action 50,757

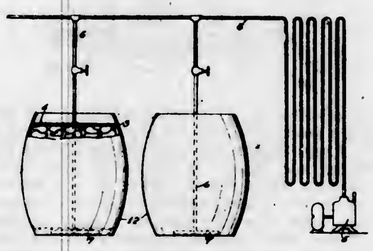
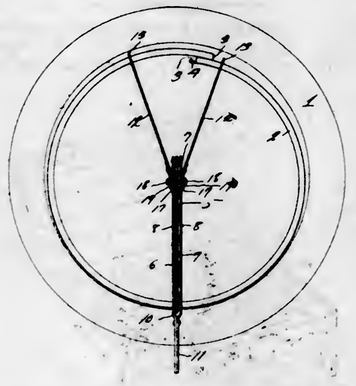
PATENTS



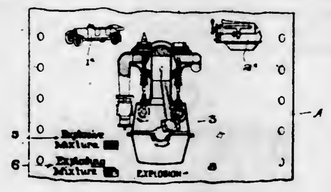
GRANTED JULY 26, 1921.

1,385,351. SPRING-MOTOR. KARL R. AKERLUND, Chicago, Ill. Filed Dec. 14, 1916, Serial No. 136,943. Renewed Jan. 2, 1920. Serial No. 349,091. 17 Claims. (Cl. 58—46.)



1. The combination with a primary motor; of a brake for normally checking the operation of the primary motor; a secondary motor which includes a load operating spring with which the first motor is in winding relation; and mechanism for effecting the release of the brake and which is inclusive of a lever connected with the brake, an arm structure, a spring connecting the arm structure with the lever, and a notched disk driven by the secondary motor and in the notch of which a portion of said arm structure may be received to reduce the tension of said spring upon the brake.

1,385,352. PROCESS OF PREPARING MALTED FOOD PRODUCTS. JOHN W. ALLEN, South Omaha, Nebr. Filed Nov. 6, 1919. Serial No. 336,024. 2 Claims. (Cl. 99—11.)

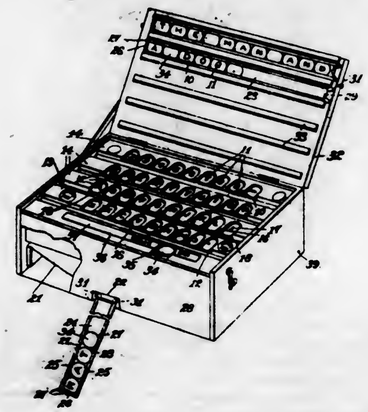


1. The herein described process of preparing meats which consists in treating meats in a pickle, and in simultaneously treating the meats while in the pickle with a malt-containing substance.

1,385,353. DEMOUNTABLE-RIM CONTRACTOR. ANDREW ANDERSON and CHARLES BROWN, Rock Springs, Wyo. Filed Apr. 29, 1920. Serial No. 377,591. 1 Claim. (Cl. 157—1.)

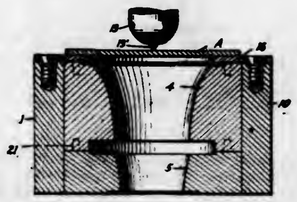
A rim contractor comprising an operating lever having spaced arms, a rim engaging arm having one of its ends pivoted to the end of the operating lever and disposed between the arms thereof, arms pivoted on pins extending outwardly from the sides of the arms of the operating lever, said pivoted arms being bent at their pivoted ends and having elongate slots in the bends thereof for the reception of the outwardly extending pins, said pins being provided with heads spaced from the pivoted arms, springs interposed between the heads of the pins and the outer faces of the pivoted arms, said slots and springs being so placed and related that the arms will be held spread when the pins are at their ends of the slots and allowed to rest against the handle when the pins are at the outer ends of the slots.

1,385,354. EDUCATIONAL FILM. FREDRICK A. AYRES, Sterling, Colo. Filed Nov. 7, 1918. Serial No. 261,513. 5 Claims. (Cl. 35—12.)



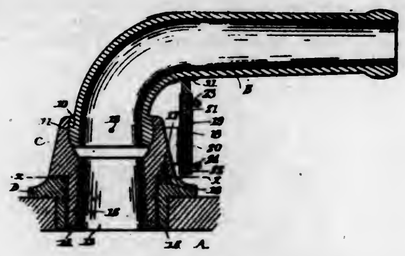
1. An educational device for depicting the various phases of an actuating medium for motors comprising a series of supports carrying pictures or images and displaying a color scheme to demonstrate the cause and effect of the actuating medium, the colors changing in subsequent pictures to depict the various phases and changes in the actuating medium.

1,385,355. PILLOW OR LIKE OBJECT. CHARLES S. BANKS, Manila, Philippine Islands. Filed Nov. 7, 1919. Serial No. 336,361. 2 Claims. (Cl. 5—15.)



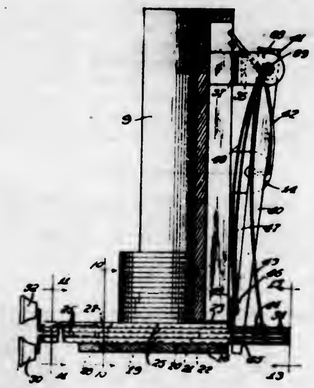
1. As a new article of manufacture, a pillow comprising three sections, the two end sections being identical and including relatively thick portions filled with non-compressible material, and a relatively thin central section located between and connected to the end sections and filled with soft yielding material.

1,385,356. EDUCATIONAL TYPEWRITER-KEYBOARD DEVICE. HARRY BATES, New York, N. Y. Filed Jan. 24, 1919. Serial No. 272,947. 18 Claims. (Cl. 35—9.)



1. A device of the character described, comprising a font of key-simulating spelling tablets bearing normally readable letters and characters thereon, and a set of magazines in each of which tablets having like letters or characters thereon are normally stored, said magazines being so related, each with respect to the others, as to position the topmost exposed tablets therein in a relative arrangement corresponding with the relative arrangement of the keys of a typewriter.

1,385,357. METHOD OF MAKING PISTON-PINS. DAVID H. BELLAMORE, New York, N. Y., and THOMAS I. S. BOAK, East Orange, N. J., assignors to Standard Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1919. Serial No. 319,130. 9 Claims. (Cl. 29—156.5.)



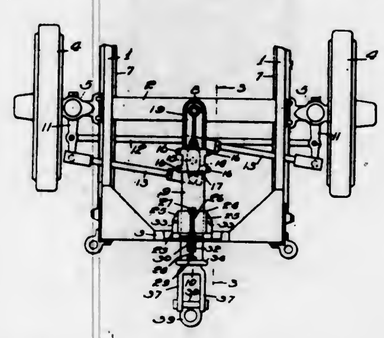
1. The process of making piston pins from a flat blank which consists in consecutively forcing said blank through dies of successively diminishing sizes to impart an elongated cylindrical form thereto, and thereafter hardening and tempering the cylindrical blank thus formed and finishing the surface thereof.

1,385,358. TONE-ARM. JOHN WESLEY BOOTH, Trenton, Ontario, Canada. Filed Mar. 10, 1920. Serial No. 364,707. 3 Claims. (Cl. 274—23.)

1. A resilient support for pivotally mounted tone arms, comprising a cylinder, a plunger slidably mounted in one end of said cylinder to project therefrom, a plug closing the opposite end of said cylinder and slidably mounted therein, a plunger projecting spring confined between said plunger and plug, said plug being slidable in the cylinder relative to the plunger to vary the tension of the intervening spring, and coöperating means carried by said plug and cylinder for supporting the plug in the cylinder and locking it in adjusted position therein.

1,385,359. SELECTIVE CHANGE-MAKER. MAX C. BRUHN and GEORGE F. MCGILL, Chicago, Ill. Filed July 18, 1918. Serial No. 245,532. 2 Claims. (Cl. 133—4.)

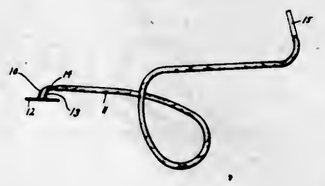
1. A selective change maker comprising a coin tube for holding a stack of coins of the same denomination, a plurality of superimposed apertured ejectors slidably disposed therebelow and adapted to receive the lowermost coins in said tube seated therein, means on said ejectors for selectively operating the same to cause the ejection of one or more coins from said tube by a single operation of one of said means, a shaft mounted on the back of said coin tube, a lever pivoted thereon and engaging said ejectors, a main spring mounted on said shaft for automatically returning the ejectors to normal position after the same have been operated, and auxiliary springs on said shaft and engaging a number of said ejectors to assist in returning the same to normal position.



1,385,360. CHANGE-MAKER. MAX C. BRUHN and GEORGE F. MCGILL, Chicago, Ill. Filed July 31, 1918. Serial No. 247,550. 11 Claims. (Cl. 133—5.)

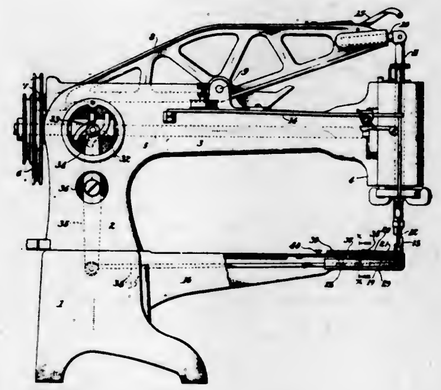
1. A change maker comprising a base section, a coin tube section, a plate disposed transversely across the rear wall thereof, and spaced parallel members integral with the base section for receiving said plate therebetween to hold the sections engaged in operating position.

9. A change maker adapted to be readily manually assembled and taken apart, including in combination a base section, a slotted back plate integrally formed thereon, members integral therewith, a locking mechanism removably engaged with said back plate, a coin tube section removably mounted on said base section, means thereon projecting between said members, and ejecting mechanisms on said base section adapted to be locked by said locking mechanism.



1,385,361. STEERING AND COUPLING CONNECTIONS FOR TRAILER-VEHICLES. CHARLES G. CLEMENT, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Apr. 16, 1919. Serial No. 290,420. 19 Claims. (Cl. 280—33.5.)

1. In a vehicle the combination with a vehicle frame and a fixed axle having steering yokes, steering knuckles pivoted to said yokes, arms fast to said knuckles and tie bar connecting the outer ends of said arms and thus maintained generally parallel with said axle, of steering arms fast to said knuckles, a draft bar pivoted to the vehicle frame, a drag rocker pivoted centrally of its length to said draft bar and extending substantially parallel to said bar when the vehicle moves in a straight line, and drag links connecting the opposite ends of said drag rocker to the outer ends of said steering arms.

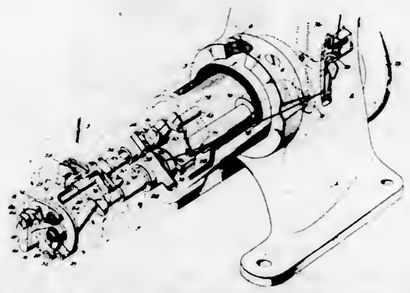


1,385,362. LACING. EDGAR I. COOMBS, Providence, R. I., assignor of one-half to Walter E. Easterbrooks, Providence, R. I. Filed Jan. 12, 1920. Serial No. 350,909. 2 Claims. (Cl. 24—140.)

2. A lacing comprising a tubular shank, having an enlarged and substantially flat head, said shank being adapted to be inserted in an eyelet and the head thereof to engage the edge of the eyelet to maintain the shank in position, said shank being curved to have its free end extend substantially at right angles to the axis of said

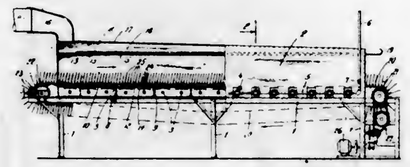
head and around the other side of the eyelet opposite said head, a flexible lacing having one end suitably secured in said tubular member.

1,385,363. SHUTTLE-DRIVING MECHANISM FOR SEWING-MACHINES. HERBERT CORRALL, Helensburg, and BERTRAM AMBROSE STEVENS, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 14, 1921. Serial No. 469,680. 6 Claims. (Cl. 112—191.)



1. In a sewing machine, in combination, a frame including a work-support, stitch-forming mechanism incorporated in said frame including a reciprocating needle, a loop-taker, a main-shaft and connections for operating the needle and loop-taker in timed relation to one another, a removable housing secured to said work-support and carrying the loop-taker and certain of said connections whereby the loop-taker and its operating connections may be removed from and replaced as a unit in the machine while preserving the timed relation of said parts.

1,385,364. TUBULAR-ARM SEWING-MACHINE. ALBERT H. DU VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Dec. 4, 1917. Serial No. 205,316. 40 Claims. (Cl. 112—200.)

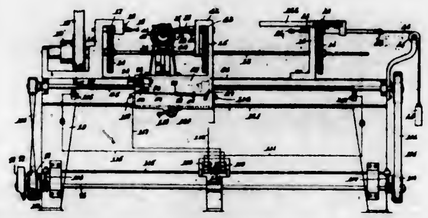


1. In a sewing machine, a frame having a tubular work-arm around which is a clear space facilitating manipulation of the work, a single rotating shaft only extending

through the junction of the arm and frame, a feed dog, a looper, means for imparting four motions to said feed-

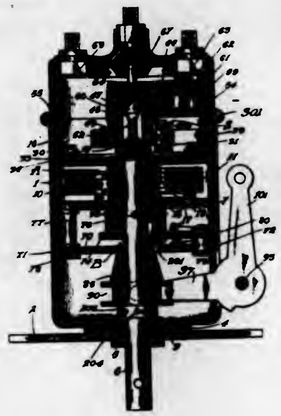
dog and endwise movements to said looper from said rotating shaft, said means being located entirely within the tubular arm.

1,385,365. PHOTOGRAPHIC DRYING-MACHINE. ALEXANDER W. DREYFOOS, Mount Vernon, N. Y. Filed Oct. 28, 1919. Serial No. 333,939. 4 Claims. (Cl. 34—12.)



1. In a machine of the character described, a drying chamber partly open at both ends and having an outlet at its top, a partition extending lengthwise in the upper portion of the chamber and having openings at spaced points, means for adjusting the areas of said openings, heating means disposed in the lower portion of the chamber, an endless conveyer having one of its reaches extending lengthwise through the chamber above the heating means, and a series of inclined plate holders carried on the conveyer.

1,385,366. BURNER FOR STEAM-AUTOMOBILES. FRANCIS I. DU PONT, Wilmington, Del., assignor to Delaware Chemical Engineering Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 20, 1918. Serial No. 263,279. 10 Claims. (Cl. 158—31.)

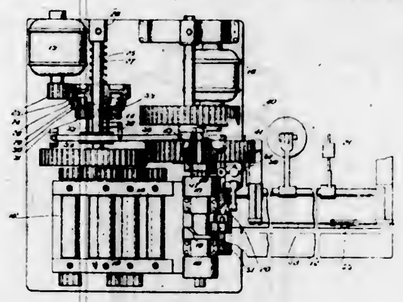


1. In a hydrocarbon fuel burning apparatus for steam automobiles, the combination, with the furnace, of a burner plate within the furnace, and a vaporizer within the furnace and having a portion extending to the exterior thereof and adapted to be heated either by means of said burner plate or by external means, there being an opening to permit said heat by external means so placed that the flame used in said external heat will also serve to ignite the main burner as soon as fuel is turned on.

1,385,367. STRING-TRUING MACHINE. GEORGE N. EINAELE, Cedar Lake, Ind. Filed Jan. 22, 1918. Serial No. 213,272. 27 Claims. (Cl. 69—6.)

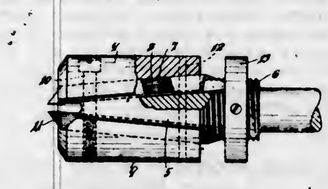
1. A string truing machine comprising means for rotating a string about an axis extending longitudinally of the string; a cutting element arranged to contact with the string during rotation thereof; and means for effecting relative movement between said string and cutting element in a direction longitudinally of the string, substantially as described.

1,385,368. IGNITION-DISTRIBUTER. LAWRENCE ERICSON, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1917. Serial No. 148,666. 15 Claims. (Cl. 200—19.)



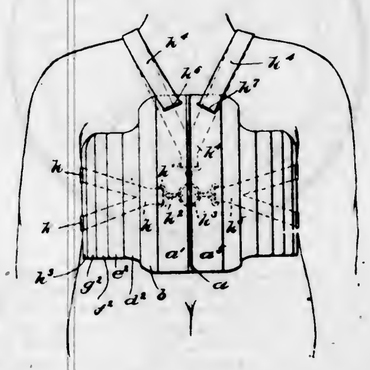
2. A device of the character described including a rotary element, a circuit controlling device rotatable with said rotary element, means for changing the angular relation between said rotary element and said circuit controlling device, said means including a conically shaped member slidable longitudinally of said rotary element and a pivoted member that controls the angular relation between the circuit controlling device and the rotary element.

1,385,369. CONTROL DEVICE FOR AUTOMATIC MACHINES. WALTER FRAZER, Elyria, Ohio, assignor to The Elyria Iron and Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 11, 1919. Serial No. 330,113. 2 Claims. (Cl. 164—49.)



1. In a machine of the character described, the combination of stock feeding mechanism, a clutch therefor, a lever directly acting on said clutch for moving it to disabled position and a brake actuated by said lever for stopping said feed mechanism, an electro-magnet for throwing said lever to braking position, a cam shaft mechanism, a clutch

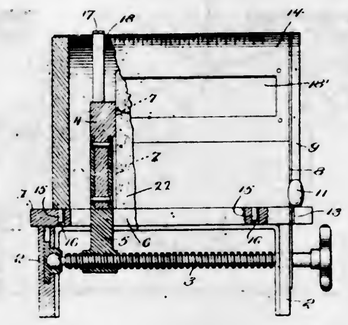
therefor, a stock cutter actuated by said cam shaft mechanism, detent mechanism normally holding said clutch for the cam shaft mechanism out of operation and movable to permit the clutch to act, an electro-magnet for operating



said detent mechanism and an electric switch in the path of the said stock having connections with both said magnets simultaneously to energize the same, whereby said magnets positively and independently control the respective mechanisms aforesaid.

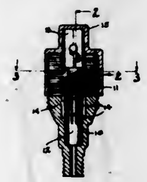
1,385,370. EXPANSION-DRILL. DANIEL S. FOX, Deep River, Conn. Filed Aug. 14, 1919. Serial No. 317,514. 7 Claims. (Cl. 77—58.)

1. An expansion drill comprising a body having grooves on opposite sides extending diagonally each of the other, retaining plates removably secured to opposite sides of the body and having mating parts of said grooves therein, and means for securing the retaining plates in place.



1,385,371. COLLAPSIBLE SHIELD. WILLIAM A. FRASER, Brookline, Mass. Filed Sept. 13, 1918. Serial No. 253,878. 13 Claims. (Cl. 89—36.)

1. A shield comprising a plurality of substantially flat members, adjacent members being movably joined together,

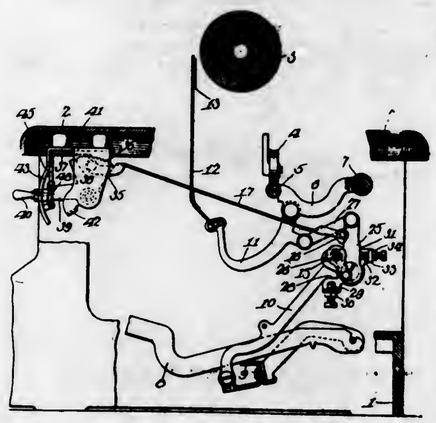


the joint permitting expansion and collapse of said members crosswise of the wearer, and permitting said members to be parallel when collapsed but permitting them to be out of parallelism when the device is expanded and the outer ends are pulled inwardly toward the wearer.

1,385,372. CHEESE-CUTTER. RICHARD C. GORHAM, Kirklin, Ind. Filed July 1, 1920. Serial No. 393,255. 1 Claim. (Cl. 31—68.)

In a device for vending an article of merchandise in portions, a base, a knife for severing said portions hinged to said base, said knife having two cutting edges, one of said edges lying substantially parallel with the base when the knife is at the end of a stroke, the other extending below the plane of the base.

1,385,373. GREASE-CUP. JOSEPH HECKENBACH, Chicago, Ill., assignor to Quality Hardware & Machine Company, Chicago, Ill., a Copartnership composed of Hilding Albert Laystrom, Carl Arthur Laystrom, and Jerry Anderson. Filed Oct. 25, 1920. Serial No. 419,354. 11 Claims. (Cl. 184—38.)

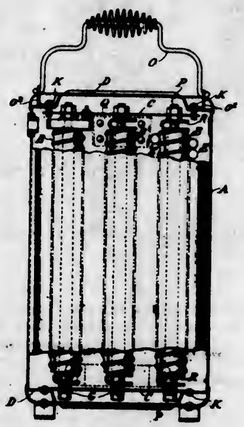


4. The combination of a perforated stud screw-threaded on its outer face, a cup screw-threaded to fit said stud, a tube located concentrically within said cup, a second tube located concentrically with respect to said stud and adapted to have snug engagement with said first named tube, and spring fingers cut out of the wall of one of said tubes adapted to engage the other tube for alining the cup and the stud with respect to each other at the time when the threads of said two members are passing into engagement with each other, substantially as described.

1,385,374. RIBBON-VIBRATOR. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed May 11, 1918, Serial No. 233,834. Renewed May 14, 1919. Serial No. 297,154. 22 Claims. (Cl. 197—157.)

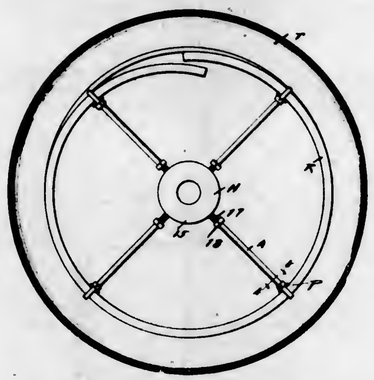
1. In a typewriter, a ribbon vibrator shiftable for upper and lower case writing, an actuating member therefor always returnable to the same normal position, an operating link having a constant extent of oscillation, and a connection between the link and member comprising one

of a pair of connecting arms the other of which may be set at different angular positions with respect to the first



arm without moving either of the parts to which the first arm is connected to produce a variable movement of the member with the same movement of the link.

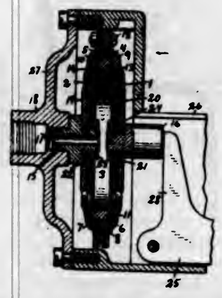
1,385,375. DISPLAY-RACK. WILLIAM T. HORMES, Govans, Md., assignor to Solomon Himmel, Baltimore, Md. Filed Dec. 11, 1918. Serial No. 266,249. 3 Claims. (Cl. 211—14.)



2. A display rack of the character described comprising an inclined supporting member provided with a plurality of openings, tubular members mounted in the respective openings, and arranged in parallel relation at an angle to the vertical, said tubular members being of a diameter somewhat greater than the diameter of a rolled umbrella, and means coöperating with said tubular members to cause umbrellas to assume substantially vertical positions when engaged therewith, whereby substantially small areas of an umbrella will engage contiguous portions of a tubular member on approximately opposite sides thereof located at the top and bottom respectively of said member.

1,385,376. ELECTRIC HEATER. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Mar. 19, 1920. Serial No. 367,055. 5 Claims. (Cl. 219—34.)

1. An electric heater comprising uncoated heating coils, and an external casing therefor having an imperforate central body portion and stamped sheet-metal heads, said heads being cut on a series of parallel lines with the metal between the cuts bent at an angle to form diagonal chutes constituting extensions of the air conduit through the central body portion.

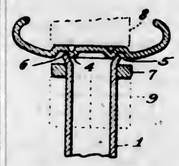


1,385,377. RIM CONSTRICTING AND EXPANDING DEVICE. JOHN LEWIS KALTREIDER and CHARLES FRANKLIN SHRYOCK, Hanover, Pa. Filed Oct. 28, 1919. Serial No. 333,977. 1 Claim. (Cl. 157—1.)

A rim contracting tool comprising a hub, arms having threaded engagement with the hub and extending radially from the same, flat plates carried by the outer ends of said arms and having their end portions formed with longitudinal slots, hooks having their rear portions pivoted within said slots, and springs secured to the under side of said flat plates and having their terminal portions contacting with the shanks of said hooks to secure the hooks in active or inactive position, the ends of said springs

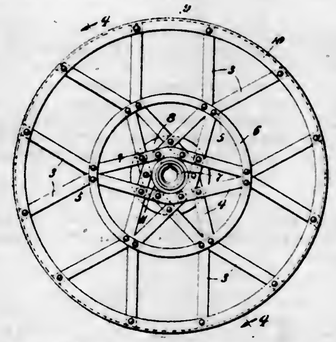
being curved away from said hooks, each of said arms being adjustable independently of the other arms, whereby a portion of the rim may be contracted or expanded independently of the remaining portions of the rim.

1,385,378. PRESSURE MEMBER. GEORGE A. KNAAK, Milwaukee, Wis. Filed Apr. 9, 1919. Serial No. 288,850. 4 Claims. (Cl. 236—26.)



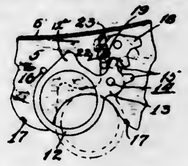
1. The combination in a pressure member, of a bearing member, a corrugated metal side, and a clamp member to clamp said side against said bearing member, said clamp member being provided with a curved surface and the side being substantially tangent to said curved surface and adapted to bend over the same to more remote points of substantial tangency.

1,385,379. ELECTRICAL CONDENSER AND METHOD OF MAKING IT. FRANZ KRATZ, Stuttgart, Germany, assignor, by mesne assignments, to American Bosch Magneto Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1917. Serial No. 144,646. 8 Claims. (Cl. 250—41.)



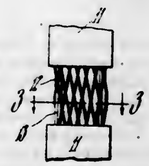
6. An electrical condenser having alternate bands of foil and dielectric, one of the bands of foil having a narrow laterally-projecting edge portion lying substantially flat against the side of the condenser and forming a side terminal therefor, the narrow projecting edge portion being of such width as to form a substantially continuous contact surface on the side of the condenser when pressed flat thereagainst.

1,385,380. METAL VEHICLE-WHEEL. LAURENCE S. LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 31, 1918. Serial No. 247,498. 7 Claims. (Cl. 301—66.)



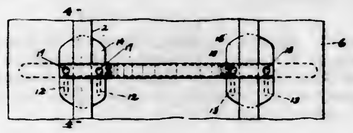
1. The method of making a metal wheel having tubular spokes combined with a metal rim consisting in providing the rim with an annular projection formed in a countersink, bringing the flared end of the spoke into engagement with said annular projection and welding them together, the upset metal due to pressure being received in the countersink.

1,385,381. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed May 6, 1919. Serial No. 295,222. 9 Claims. (Cl. 301—73.)



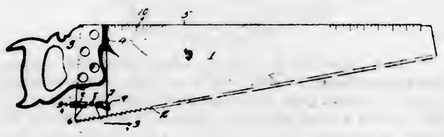
1. In a metal wheel of the character described, a spoke portion consisting of metal plates or strips slit and spread at their central part into elongated branches spread out and carried around the hub to form separate members disposed at opposite sides of the hub axis and bifurcated at both ends for attachment to the rim by the ends of the bifurcations.

1,385,382. PORTABLE CHANGE-MAKER. GEORGE F. MCGILL and MAX C. BRUHN, Chicago, Ill. Filed Mar. 19, 1918. Serial No. 223,403. 6 Claims. (Cl. 133—5.)



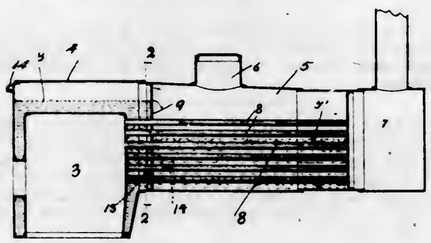
5. A change maker comprising a coin tube, an ejector ring pivotally mounted therebeneath, and having gear teeth and means engaging said gear teeth for swinging said ejector.

1,385,383. REINFORCEMENT FOR TIRE-BEADS. MELVON A. MARQUETTE, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Original application filed Apr. 9, 1919, Serial No. 288,716. Divided and this application filed Dec. 10, 1919. Serial No. 343,725. 5 Claims. (Cl. 152—13.)



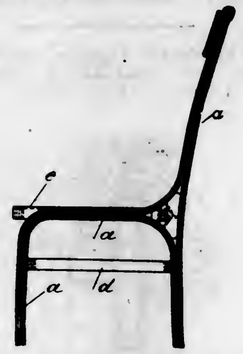
5. A reinforcement for the bead of a tire casing comprising a strip of diagonally woven material, and longitudinally extending reinforcing members embraced in the selvage edges thereof.

1,385,384. BRIEF-CASE. FRANK MASHEK, Chicago, Ill. Filed Aug. 23, 1920. Serial No. 405,351. 5 Claims. (Cl. 190—58.)



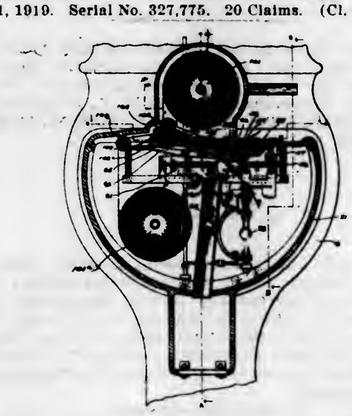
2. An article of the class described comprising a flexible telescopic carrying member; a flexible hinged flap inclosing said carrying member; a handle mounted on said flap; means whereby said flap may be adjusted to enlarge the carrying capacity of said carrying member; and coöperating means on the inner and outer side of said flap whereby said handle automatically adjusts itself to carrying position upon a change of depth of said case, substantially as described.

1,385,385. SAW. CHARLES O. MESSENGER, Astoria, Oreg. Filed Nov. 30, 1920. Serial No. 427,268. 2 Claims. (Cl. 7—13.)



2. The combination with a handsaw having a graduated blade and a handle member, of a U-shaped clamping member carried by the rear edge of the saw blade and disposed beneath the handle member, the ends of the arms of the U-shaped member being in vertical alinement with the forward edges of the handle member on each side of the blade, said ends of the arms and forward edges of the handle member being right-angularly disposed in relation to the upper edge of the saw blade.

1,385,386. LOCOMOTIVE-BOILER. JOHN P. MONGAN, Minneapolis, Minn. Filed Aug. 22, 1918. Serial No. 251,023. 2 Claims. (Cl. 122—461.)

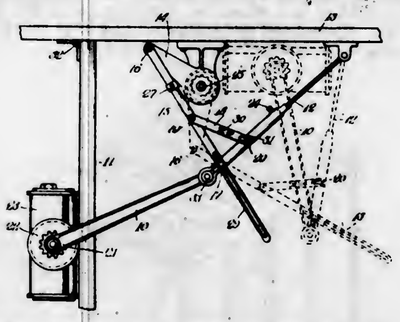


1. A combination with a boiler of the locomotive type, of a baffle plate applied within the boiler forward within the rear end of the flues and through which the flues are passed to the flue sheet of the fire-box, said baffle plate having a water passage above the level of the flues and above the top of the fire-box, whereby a higher level of water may be maintained in the rear compartment of the boiler than in the front compartment of said boiler, all of said flues being covered with water at the rear of said baffle plate, but certain of the upper flues, forward of said baffle plate, being above the water level in the front compartment of the boiler, so that they will be exposed in the steam chamber thereof.

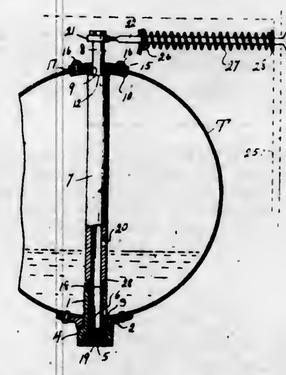
1,385,387. WOODEN ARTICLE AND PROCESS OF MAKING THE SAME. GIUSEPPE MORANDI, Florence, Italy. Filed July 1, 1920. Serial No. 393,473. 2 Claims. (Cl. 155—186.)

1. The herein described process of constructing wooden articles, which consists in gluing together a plurality of layers of wood and bending the same into a plurality of units, securing said units together to form a single block having the general configuration of the finished article, and sawing said assembled block into a plurality of frame members.

1,385,388. TICKET-ISSUING MECHANISM. HUBERT A. MYERS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,775. 20 Claims. (Cl. 211—33.)



1. In a device of the character described, ticket-issuing mechanism comprising a slidable member, a pair of feed dogs connected therewith, plates having slots in which the heads of said feed dogs are guided, and pivoted guides arranged in said slots to control the position of the feed dogs during the sliding movement of said member.



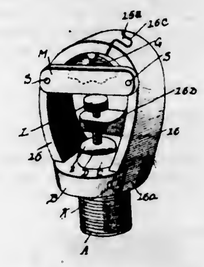
11. In a device of the class described, in combination, a ticket reel, a device for issuing tickets from said reel, a supplemental reel, and means acting automatically upon exhaustion of the supply of tickets from the first said reel to supply said issuing device from said supplemental reel.

1,385,389. DOOR-CONTROLLING DEVICE. LEWIS C. NORTON, Chicago, Ill., assignor to Norton Door Check Company, Chicago, Ill., a Corporation of West Virginia. Filed Dec. 8, 1919. Serial No. 343,337. 16 Claims. (Cl. 189—45.)

1. The combination of a door, a mechanism tending to close the door, a second mechanism which tends to hold the door open when the door is open and which tends to hold the door closed when the door is closed, and heat-controlled means whereby in case of fire, said second mechanism releases the door to permit it to close under the action of said first mechanism, and whereby said second mechanism will assist said first mechanism in the final closing movement of the door.

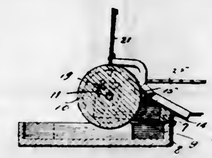
1,385,390. FUEL-TANK OUTLET. FRANK P. OUDERKIRK, Imperial, Nebr. Filed May 8, 1920. Serial No. 379,878. 2 Claims. (Cl. 158—46.5.)

1. In combination with a reservoir, a tubular casing extending therein, said casing being provided with a port within the reservoir, a rotatable tubular stem supported within the tank the inserted end portion of the stem and the inserted end portion of the casing being in telescopic relation, said stem being provided with a port registering with the port of the casing upon rotation of the stem in one direction and means coacting with the stem to automatically maintain the stem in a position with the port either in or out of register with the port of the casing, said stem being provided with a second port at all times in communication with the reservoir, the telescoping portions of the stem and the casing being threaded one upon the other, said casing and stem being provided with coacting means for limiting the rotation of the stem when the first port of the stem is out of register with the port of the casing.



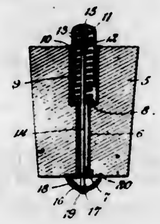
1,385,391. APRON. EMMA C. PHASE, Nantucket, Mass. Filed Oct. 22, 1920. Serial No. 418,673. 8 Claims. (Cl. 2—54.)

1. An apron of the kind described, elongated in shape to cover the shoulders and one arm only of the wearer and having at one end thereof an opening sufficiently large to admit the hand and fit around the wrist and having its



opposite end so shaped as to fit about the neck, and carrying means of fastening together its neck shaped ends.

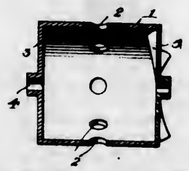
1,385,392. SPRINKLER-HEAD. WILLARD CLARKE PENTY, Columbus, Ohio. Filed June 30, 1920. Serial No. 392,942. 1 Claim. (Cl. 169—39.)



A sprinkler head comprising, a threaded sleeve having a valve seat formed at one end thereof, a head formed on said sleeve, a yoke carried by said head and comprising a stationary section fixed to the head and a movable section hingedly supported on said head for an outward swinging movement from the stationary section, said sections having interfitting ends, a deflecting cap carried by the stationary section and overlying said valve seat, a valve normally reposing on said seat, an arm formed on the movable section, a set screw adjustably mounted on said arm and engageable with said valve for retaining the same on said seat, studs formed on said sections, and a fusible bar removably fitted on said studs and spanning said sections for the purpose described.

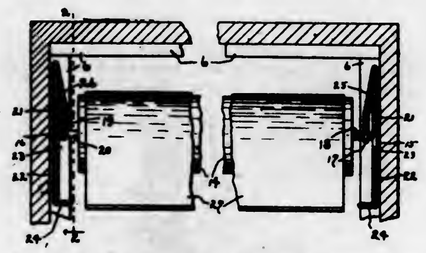
1,385,393. EVAPORATING-PAN AND SKIMMER. EPHRIAM B. POOLE, Cordova, Ala. Filed Oct. 7, 1919. Serial No. 329,172. 3 Claims. (Cl. 127—9.)

3. The combination with an evaporating pan, of a carrier frame hinged thereto, a shaft mounted in the frame and movable therewith toward and away from the top of the pan, a plurality of skimming wheels carried by the shaft, means for holding the frame at different points of its adjustment, and a shedding trough for each wheel comprising a member having a perforated portion overhanging the pan and a member pivotally connected with the first member and disposed to receive skimmings from the wheel and discharge it to the first named member.



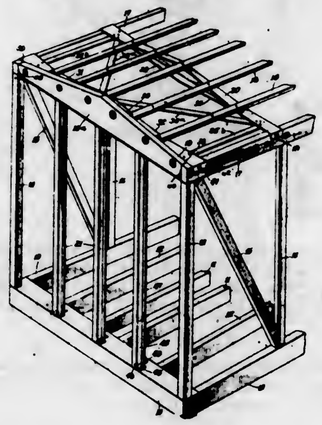
1,385,394. STOPPER FOR VACUUM-BOTTLES. ROBERT S. PORTER, San Diego, Calif., assignor of one-half to Edward G. Siggers, Washington, D. C. Filed July 27, 1920. Serial No. 399,370. 4 Claims. (Cl. 215—102.)

1. The combination with a one-piece compressible stopper having a central longitudinal bore, a bushing snugly fitting the entire length of said bore, a valve stem extending through the bushing, a valve on the lower end of the stem, and means for causing the valve to be seated on the corresponding end of the stopper free of the bushing, said valve being hollow whereby only its edge rests on the stopper.



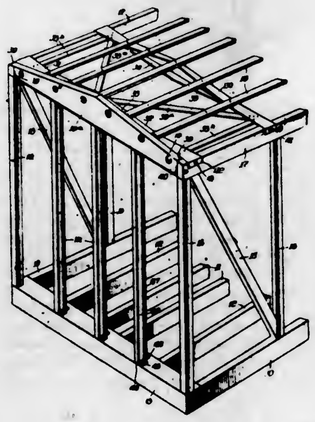
1,385,395. [WITHDRAWN.]

1,385,396. PULLEY. EVERETT E. RAYBURN, Greenview, Ill. Filed Aug. 31, 1920. Serial No. 407,124. 4 Claims. (Cl. 64—43.)



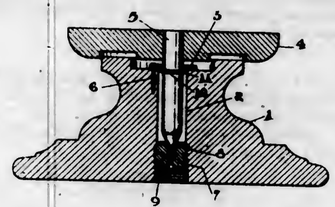
1. A hollow cylindrical pulley having air holes formed in its periphery and having one side wall shaped into a fan.

1,385,397. ROLLER-BRACKET FOR WINDOW-SHADES. RICHARD E. REESE, Omaha, Nebr., assignor of one-half to William McKinley, Omaha, Nebr. Filed Aug. 30, 1920. Serial No. 406,885. 1 Claim. (Cl. 156—24.)



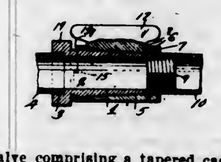
In roller brackets for window shades, said roller having pintles at its ends, a metallic strand approximately of M-shape, providing a pair of downwardly extending arms disposed in a single plane and providing a second pair of connected arms extending convergently outwardly of the plane of the first named pair of arms, the end-portions of the connected parts of the second pair of arms being bent toward one of said first named arms to provide a socket for receiving one of the pintles of the roller, said first named pair of arms being bent to form a pair of loops having terminal projections disposed in the horizontal plane of said socket.

1,385,398. CAR CONSTRUCTION. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 26, 1914, Serial No. 814,519, now Patent No. 1,268,058, dated May 28, 1918. Divided and this application filed June 29, 1917. Serial No. 177,829. 7 Claims. (Cl. 105—411.)



1. A car end framing construction comprising in combination, corner posts, metallic end posts, a metallic end carline secured thereto, a metallic roof carline to the rear of said end carline, and tie members connecting said end and roof carlines.

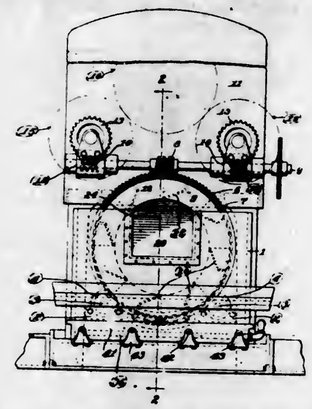
1,385,399. CAR CONSTRUCTION. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 26, 1914, Serial No. 814,519. Divided and this application filed May 27, 1918. Serial No. 236,741. 5 Claims. (Cl. 108—5.5.)



5. A car framing construction comprising the combination with the longitudinal side plates and the transverse exterior end member of a car body, of an interior truss frame connected to the exterior end member and to the longitudinal side plates for strengthening the car roof end

1,385,400. STEP-BEARING. RALPH R. SCHEIBE, Somerville, Mass. Filed Mar. 9, 1921. Serial No. 450,997. 3 Claims. (Cl. 64—25.)

1. A step bearing comprising a support having a vertical hole extending through the same; a ring secured to the upper side of the support about the hole, the opening in the ring being of less diameter than the hole in the support; a spindle passing through the ring and closely fitting in the same, said spindle having an annular groove formed therein below the ring; a plug screwed into the hole having a bearing formed in its upper end to receive the lower end of the spindle; and a divided spring retainer adapted to pass up between the spindle and the inner wall of the hole and engaged in the groove aforesaid.

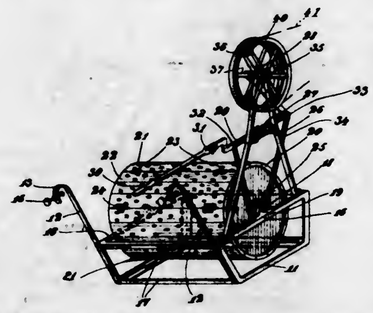


1,385,401. SLEEVE-VALVE. JOHN HENRY STOCKHOLDER, New Orleans, La. Filed Mar. 19, 1920. Serial No. 367,265. 1 Claim. (Cl. 251—9.)

A sleeve valve comprising a tapered casing, a rotatable sleeve shorter in length than the tapered casing rotatably mounted on the tapered casing, one end of the tapered casing extending beyond the rotatable sleeve and provided with threads, a lock nut threaded on said threaded end of the tapered sleeve and adapted to hold the rotatable sleeve in frictional engagement with the tapered casing and forming means for taking up wear incident to rotation of the sleeve thereby obviating regrinding, the other end of the tapered casing being provided with an integral wrench engaging portion for holding the same against rotation when the lock nut is being adjusted, means for connecting pipe lines to the ends of the tapered casing, ports carried in the walls of the tapered casing and the rotatable sleeve and adapted to be moved into and out of registration with each other, a handle member carried by the rotatable sleeve, said port in the tapering casing being upwardly disposed, an upwardly extending member having its lower end pivotally connected to the handle and a float connected to the upper end of the upwardly extending member and forming means whereby said ports will be moved into registration.

1,385,402. QUENCHING-MACHINE. OSWALD SCHLAUPITZ, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 2, 1920. Serial No. 349,128. 9 Claims. (Cl. 266—8.)

1. A quenching machine comprising a drum rotatable upon a horizontal axis, said drum being adapted to receive a quenching fluid in its lower portion and having openings in its opposite ends for receiving and discharging articles, a receiving device projecting into the discharge opening of said drum, said drum having a series of pockets located adjacent to said receiving device, said pockets having openings facing the direction of rotation through which said articles are received into said pockets and are discharged therefrom into said receiving device, the interior surface of said drum having a series of radially spaced plates extending from the receiving end thereof to the openings in said pockets and adapted to engage the articles to lift the same



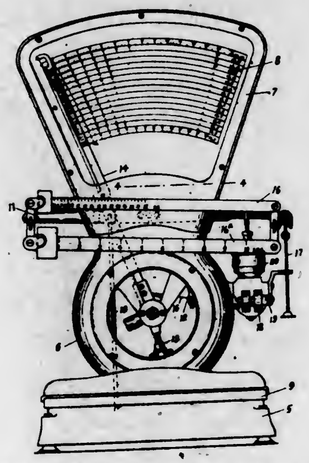
from the bottom of said drum, said plates being arranged to slope downwardly from the receiving end of the drum to the openings in the pockets on the upward moving side of the drum whereby the articles supported thereon are caused to slide off said plates into said pockets.

1,385,403. MACHINE FOR TREATING PHOTOGRAPHIC MOVING-PICTURE FILMS. CAMILLE A. SENTOU and ETIENNE JACQUET, Fort Lee, N. J., assignors to Sen-Jacq Film Print Co., Fort Lee, N. J., a Corporation of New Jersey. Filed Nov. 8, 1920. Serial No. 422,719. 9 Claims. (Cl. 95—94.)

1. In a machine of the class described, means for propulsing a film, means for forming a loop in the film, and means associated with the film propulsion means and operated from the loop forming means to vary the speed of the film so as to maintain substantially constant the length of the loop.

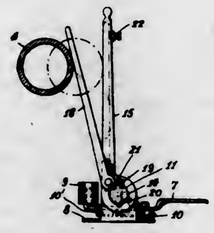
1,385,404. WASHING-MACHINE. PATRICK J. SKEFFINGTON, New York, N. Y. Filed Jan. 11, 1921. Serial No. 436,412. 7 Claims. (Cl. 68—18.)

5. In a clothes washing device, a perforated, rotatably mounted clothes receiver, a chain wheel associated there-



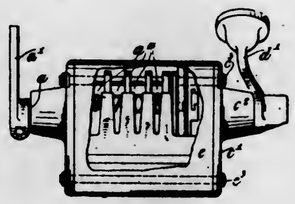
with, an oscillating lever, a chain depending therefrom and engaging said chain wheel, and means for facilitating the operation of said lever.

1,385,405. MICROMETER. ALFRED TANGEN, Detroit, Mich. Filed Sept. 8, 1920. Serial No. 408,983. 3 Claims. (Cl. 33—164.)



1. A micrometer comprising a micrometer screw and a micrometer nut in which said screw is threaded, the walls of the micrometer nut being split, lugs carried by said micrometer nut, said lugs being disposed in slots of an adjustable graduated collar, said lugs extending beyond the outer walls of the adjusted graduated collar and disposed in an annular channel of a contractible micrometer clamp, said contractible micrometer clamp forming means whereby when the clamp is contracted the threads of the micrometer screw and the micrometer nut will be bound and locked together, and means for contracting the contractible micrometer clamp.

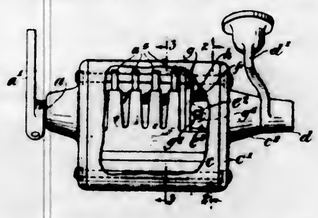
1,385,406. WEIGHING-SCALE. HENRY THEOBALD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 29, 1916. Serial No. 87,412. 14 Claims. (Cl. 265—61.)



1. In a scale, and in combination with the weighing mechanism thereof, a fixed chart having a plurality of rows of weight indications thereon, said rows having their zero indications angularly spaced progressively out of alinement with each other, and a swinging index hand coöperating with all of said rows and bearing indications distinguishing the several rows by the extent of the displacement of their zero indications.

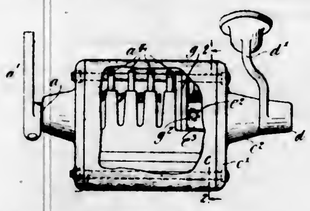
1,385,407. AUTOMATIC STOP MECHANISM FOR TALKING-MACHINES. HAROLD L. TUNISON, Upper Montclair, N. J., assignor to Frank L. Dyer, Montclair, N. J. Filed June 17, 1919. Serial No. 304,754. 6 Claims. (Cl. 192—116.)

1. In a stop mechanism for talking machines, the combination with the tone-arm, of a spring actuated brake, a trigger for locking the brake in its widthdrawn position, means whereby the trigger may be released by the tone-arm traversing the record, and means coöperating with the tone-arm for automatically determining the releasing point of said trigger, substantially as set forth.



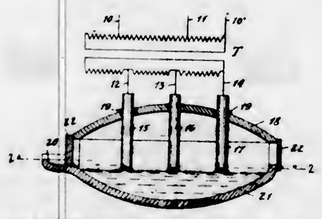
1,385,408. COUNTING-MACHINE. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 20, 1920. Serial No. 360,248. 8 Claims. (Cl. 235—144.)

1. In a resetting mechanism for a numbering machine, the combination of a resetting shaft, an actuating shaft, a planetary gear, oscillated by the actuating shaft about the axis of the latter and in operative engagement with the resetting shaft, and a non-rotating member in engagement with the planetary gear, whereby oscillation of the planetary gear on its own axis and of the resetting shaft on its axis is effected.



1,385,409. COUNTING-MACHINE. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 15, 1920. Serial No. 372,085. 6 Claims. (Cl. 235—144.)

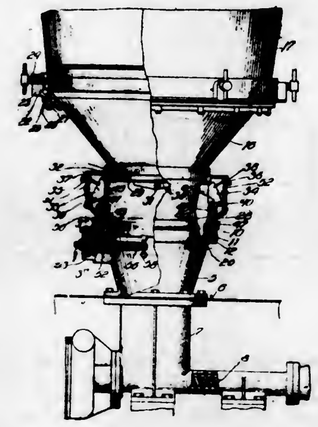
1. In a resetting mechanism for a numbering machine, the combination of a toothed resetting shaft, an actuating shaft in line with the resetting shaft, a pivotally mounted gear segment in mesh with the resetting shaft, means to support the gear segment and means whereby



through oscillation of the actuating shaft the gear segment is oscillated on its pivot.

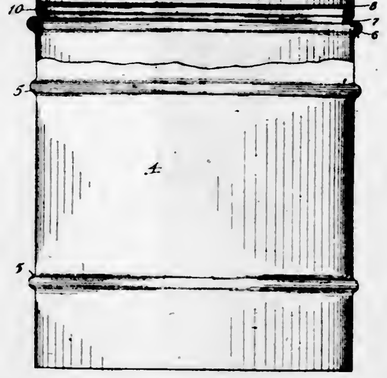
1,385,410. COUNTING-MACHINE. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 20, 1920. Serial No. 375,198. 3 Claims. (Cl. 235—144.)

1. In a re-setting mechanism for a numbering machine, the combination of a toothed re-setting shaft, an actuating shaft, and a pivotally mounted gear segment engaging the re-setting shaft, the actuating shaft and the gear segment having a pin and slot engagement whereby the gear segment is oscillated through oscillation of the operating shaft.



1,385,411. ELECTRIC FURNACE. CARL HANS VOM BAUR, Douglaston, N. Y. Filed Dec. 30, 1918. Serial No. 268,910. 7 Claims. (Cl. 204—64.)

4. An electric furnace whose contour, in plan view, is of generally elliptical shape, with three electrodes adapted to be supplied with three-phase currents and placed one at the center of the furnace and the others on the major axis of said figure, halfway between the center and the ends of such axis, the minor axis being equal to about .64 times the major axis.

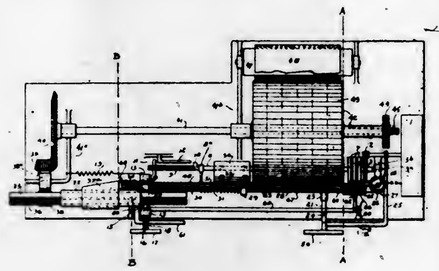


1,385,412. APPARATUS FOR CARBURETING AIR WITH SOLID FUEL. THOMAS F. WILLIAMS, DONALD W. COY, and HARRY B. PRUDEN, Chicago, Ill., assignors to Powdered Coal Engineering and Equipment Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 26, 1918. Serial No. 251,561. 6 Claims. (Cl. 193—46.)

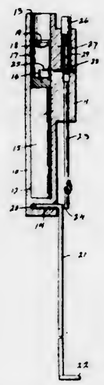
1. In a device of the class described and in combination with the feeding means thereof, a chute delivering to said feeding means a funnel having means for attachment to a package to be emptied into said chute, means for closing

said funnel, and means for removably attaching the funnel to the chute.

1,385,413. PAIL. JAMES H. WILSON, Chicago, Ill. Filed Jan. 27, 1919. Serial No. 273,323. 3 Claims. (Cl. 220—67.)



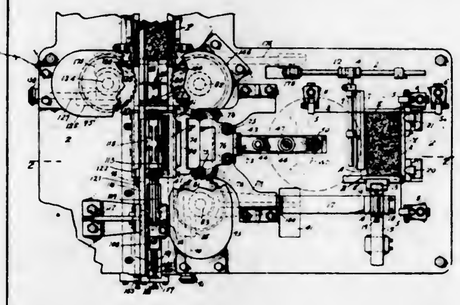
1. A pail comprising a body portion having an inwardly extending shoulder adjacent to the end, a cover formed of a single piece and fitting closely within the end, the portion of the body extending above said cover being crimped, whereby it may be bent inwardly to hold the cover in position.



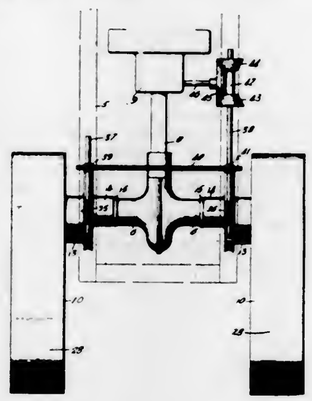
1,385,414. TIME AND COST COMPUTING AND RECORDING MECHANISM. PAUL WILSON, Pilot Oak, Ky. Filed Feb. 26, 1920. Serial No. 361,575. 21 Claims. (Cl. 234—43.)

1. In a device of the class described, a clock mechanism, a card holder adapted to receive a record card, a punch adapted to perforate said card, said punch mounted so as to be moved parallel to the face of the card by the movement of the clock at a measured rate, a stop carried by said punch, upper and lower pairs of racks mounted for actuation parallel to said card, means for actuating the same, means provided to arrest the movement of one of said racks when it arrives opposite the perforation of said

card made by the punch, means provided to permit the other of said racks to continue to travel until its movement is arrested by a stop carried by the punch, a printing wheel mounted for rotation, means provided for rotating said printing wheel, said means adapted to operate during the period of time that one rack travels after the travel of the other rack has been halted.



1,385,415. SPARK-PLUG AND IGNITION TESTER. WILLIAM S. WITTER, Davenport, Iowa. Filed Feb. 15, 1919. Serial No. 277,212. 17 Claims. (Cl. 175—183.)

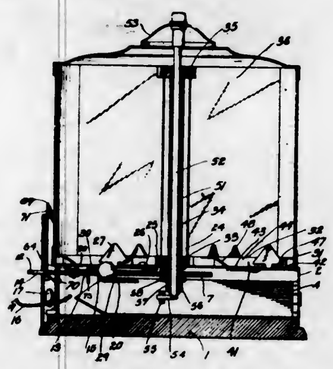


6. A tester of the character described comprising a tubular body having a bore open at one end, the body being formed of insulated material, a conductor angularly bent at one end and having said angular end rotatably engaged in the body opposite the open end thereof, a metallic body disposed with said bore and having an electrode, a second electrode passing through the wall of the body and spaced from the first electrode to form a spark gap, and means for establishing or disestablishing electrical connection between the first named conductor and the electrode.

1,385,416. PLATE-FINISHING MACHINE. WILLIAM M. WOOD, New Brighton, and HOWARD REYNOLDS, New York, N. Y., assignors to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Apr. 15, 1918. Serial No. 228,741. 52 Claims. (Cl. 29—21.)

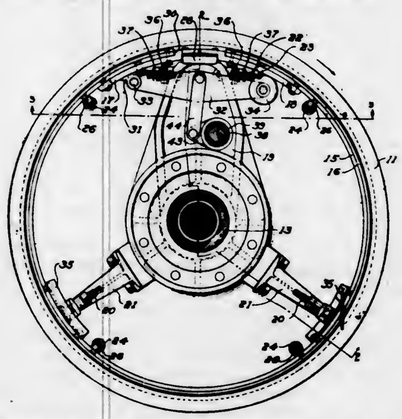
1. In a plate finishing machine, the combination of means for finishing two edges of a plate, means for engaging registering guides in said plate during the finishing operation to control the plate during such operation, and means for finishing the other two edges of the plate to which means the plate is delivered while under control of the means engaging the guides.

1,385,417. TRACTOR. JOHN COCHRANE WOOLEY, Moscow, Idaho. Filed Aug. 21, 1919. Serial No. 319,016. 6 Claims. (Cl. 180—41.)



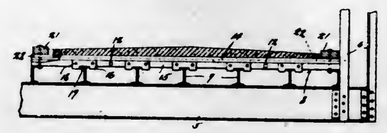
1. In a tractor of the character described, an axle casing to be secured to the frame of the tractor, eccentric bearings arranged at the ends of the axle casing, each eccentric bearing including an outer eccentric bearing element and an inner eccentric bearing element having eccentric hubs pivoted upon the end of the axle casing, said hubs having a recess formed therein, said inner and outer eccentric bearing elements being provided at their peripheries with inclined faces, shims arranged between the contacting sides of the inner and outer eccentric bearing elements, adjustable means connecting the inner and outer eccentric bearing elements, an annular tread member arranged about the inner and outer eccentric bearing elements, and having inner inclined faces and an annular gear arranged between the faces, tapered rollers engaging the inclined faces of the eccentric bearing elements and the inclined faces of the annular tread member, a gear arranged within the recess of each pair of inner and outer eccentric bearing elements and engaging the annular gear, means to turn the last named gear, and means to turn each pair of inner and outer eccentric bearing elements upon their pivot.

1,385,418. BEARING FOR ROLLERS. ALBERT M. AYERS, Nutley, N. J. Filed Apr. 7, 1920. Serial No. 371,847. 3 Claims. (Cl. 156—29.)



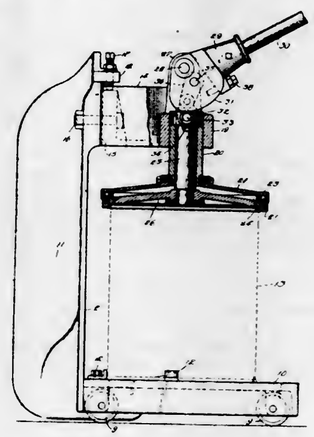
3. In combination with a roller having a kerfed end, a liner and facing therefor, said facing open to receive an interlocking male part, and a cap adapted to partly cover said end of said roller and liner, and said liner and facing formed integrally out of a single piece of metal.

1,385,419. VENDING-MACHINE. MELVILLE B. BAIRD, Kansas City, Mo., assignor of one-half to John C. W. Bland, Tulsa, Okla. Filed Dec. 13, 1919. Serial No. 344,658. 8 Claims. (Cl. 211—8.)



1. In a vending machine, an actuating slide having an opening, a pivoted gate carried by the slide, means for moving the gate across the opening when the slide is moved in one direction and away from the opening when the slide is moved in another direction, and means for delivering material into said opening.

1,385,420. BRAKE. WALTER C. BAKER, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 10, 1919. Serial No. 289,059. 7 Claims. (Cl. 188—79.)

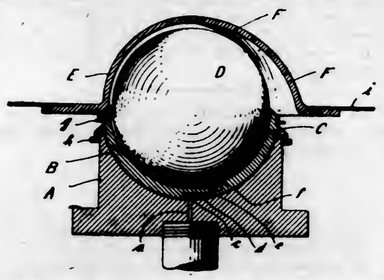


1. In brake mechanism, the combination of a brake drum, a brake band, members rigidly secured to the ends of the brake band, anchoring means coöperating with said members to limit the circumferential movement of the brake band, and operating means for moving the ends of the brake band toward the drum comprising a member movable with the member on one end of the brake band and coöperating with the member on the other end of the brake band.

1,385,421. COMBINED BRIDGE-FLOOR. FITCH H. BEACH, Charlotte, Mich. Filed Dec. 26, 1919. Serial No. 347,310. 1 Claim. (Cl. 14—73.)

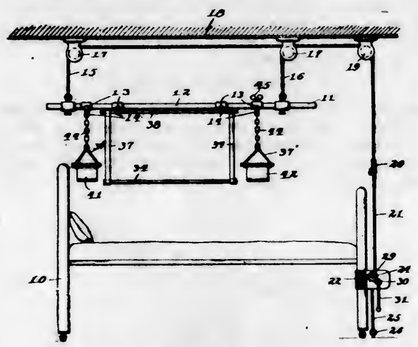
In combination with a bridge construction including transverse floor beams, I beams supported by the floor beams and disposed in parallel relation, sectional flooring, steel plates carried by the sectional flooring, each steel plate having a cut out portion adapted to embrace a portion of the I beam associated therewith, and each of said sections having a recessed upper surface to accommodate a surfacing material.

1,385,422. MACHINE FOR FASTENING CAN-COVERS. STEVENS A. BENNETT, Chicago, Ill., assignor to Wilson & Bennett Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1919. Serial No. 303,978. 6 Claims. (Cl. 113—16.)



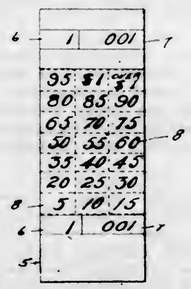
1. A machine for fastening can covers, comprising a die member for bending the cover holding projections on a can, and a second die member for completing the bending operation and means for actuating said die members to press the projection against the cover and simultaneously press the cover against its seat.

1,385,423. COMPASS. ROYAL E. BIBBINS, New York, N. Y. Filed July 31, 1920. Serial No. 400,323. 1 Claim. (Cl. 33—204.)



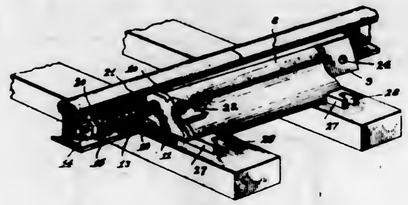
A compass which comprises a base cup adapted to permit a supply of air to pass therethrough to the chamber of said cup, a floating vessel adapted and shaped to rest in said base cup when stationary and to float therein when raised by the supporting air, a removable and ad-

justable cover for said vessel, and a ball adapted to be located inside said vessel when covered and to spin freely



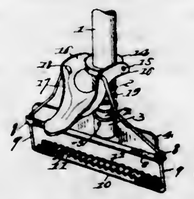
and effectively therein when, and as, acted upon by the air fed to said vessel through said base cup.

1,385,424. INVALID-HANDLING APPARATUS. VINA BILLINGS, Detroit, Mich. Filed Feb. 21, 1920. Serial No. 360,269. 4 Claims. (Cl. 5—44.)



1. A device of the class described comprising a horizontally disposed member adapted to be supported above a bed, means for raising and lowering said member, a plurality of transverse arms on said member terminating in hooked ends, rods detachably supported in said hooked ends, links depending from said rods, longitudinally disposed rods attached to the lower ends of said links, and a flexible member provided with casings to receive said rods, substantially as described.

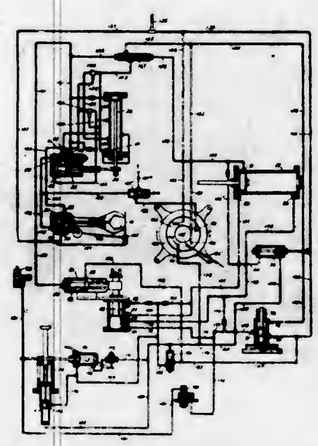
1,385,425. CASHIER'S TICKET. ERNEST V. BLOOMQUIST, Minneapolis, Minn. Filed Apr. 22, 1920. Serial No. 375,682. 1 Claim. (Cl. 283—51.)



A cashier's ticket having end spaces, longitudinal and transverse rows of perforations between said end spaces dividing the intermediate portion of the ticket into detachable squares, certain of which have printed thereon, in denominations increasing by five, the numerals five to ninety-five inclusive, the next following square after 95 having printed thereon $1, and the next following square after $1 having printed thereon Over $1, said transverse rows of perforations being extended completely across the ticket.

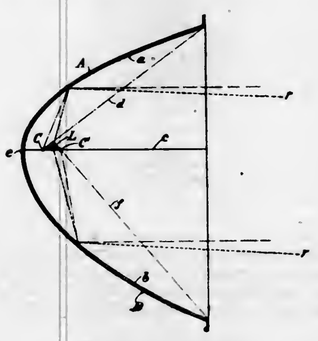
1,385,426. RAIL-JOINT CHAIR. JOHN A. BRIDGE, Larimer, Pa., assignor of one-eighth to Lawrence A. Bridge and one-eighth to Charles C. Ponitz, North Irwin, Pa. Filed Apr. 30, 1921. Serial No. 465,787. 3 Claims. (Cl. 238—207.)

1. A rail-joint chair, comprising a base adapted to lie beneath the rails and provided with an integral supporting flange adapted to engage one side of the rails and the underside of the rail-head, and a wedge-flange extending upwardly and spaced from the other side of the rails and provided with an inner face which is inclined with respect to the sides of the rails to form a wedge-space between the rails and the wedge-flange, a wedge-bar adapted to be forced into the wedge-space, and means connected to the small end of the wedge-bar for holding it in wedging position, including a spring mounted on an extension rod projecting from the small end of the wedge-member and with locking means for forcing it under tension for automatically taking up loose motion.



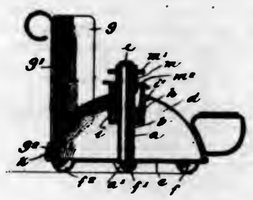
1,385,427. MOP CLAMP AND HEAD. JOSEPH G. COUCH, Bessemer, Mich. Filed Mar. 9, 1921. Serial No. 450,878. 2 Claims. (Cl. 15—56.)

1. In a device for the purpose indicated, a stationary mop clamping jaw, a handle therefor, said clamping jaw having a V-shaped channel provided with a longitudinal arrangement of teeth in its crotch, a movable jaw opposing the V-shaped channel of the stationary jaw and having parallel rows of teeth for straddling the teeth of the stationary jaw for clamping the mop therebetween and means for holding the movable jaw in clamping position with the stationary jaw.



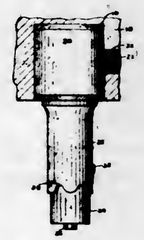
1,385,428. MACHINE FOR MAKING GLASS BOTTLES. CHARLES F. COX, Bridgeton, N. J. Filed June 4, 1912. Serial No. 701,506. 6 Claims. (Cl. 49—5.)

4. In a bottle making machine, an inverted mold for receiving the molten glass, shears above said mold for removing the excess glass, a downwardly movable plunger provided with a bottom finishing head, a neck finishing head, means for operating said shears, and means controlled by said shear operating means for both operating said plunger and rotating said neck finishing head.



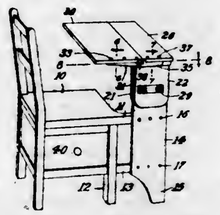
5. In a glass-working machine, the combination of a cylindrical carrier rotatable about its own axis and otherwise movable only in a horizontal plane and having a fluid-pressure chamber, a mold including two mating members at least one of which is movable relative to the other, a piston mounted in said fluid-pressure chamber, connections between said piston and the movable mold member or members, and means for turning said cylindrical carrier upon its axis to invert the mold.

1,385,429. SEARCHLIGHT-REFLECTOR. CHARLES W. CROCKETT and CHARLES H. CROCKETT, Troy, N. Y. Filed Feb. 27, 1915, Serial No. 10,956. Renewed Jan. 11, 1921. Serial No. 436,615. 6 Claims. (Cl. 240—41.)



1. A searchlight reflector comprising a curved surface lying substantially on one side of a horizontal plane through the horizontal axis of a vertical axis section of the surface, the vertical axial section of the said surface being an arc of a conic section, and a source of light lying substantially above the horizontal plane through the horizontal axis of a vertical axial section of the surface and forward of a plane intersecting the forward upper edge of the reflector and the focus of a vertical axial section of the surface, whereby reflection of light in a direction above the horizontal is substantially prevented.

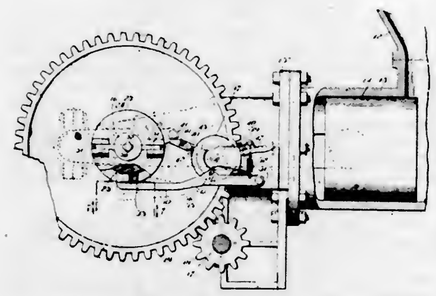
1,385,430. LAMP. GERÓNIMO CROSETTI, Buenos Aires, Argentina. Filed Nov. 29, 1920. Serial No. 427,015. 9 Claims. (Cl. 67—36.)



1. A lamp, comprising a liquid fuel receptacle embodying a bottom member; a vertical core secured at its lower end to the bottom member and projecting upwardly beyond said receptacle; an open-ended vertical tube fitting over said core but spaced therefrom to produce an intermediate tubular chamber therebetween which communicates at its lower end with the interior of the fuel receptacle; and a piece of absorbent, substantially noncombustible material fitting in the upper end of the tube and to which the fuel is fed by capillarity through said chamber.

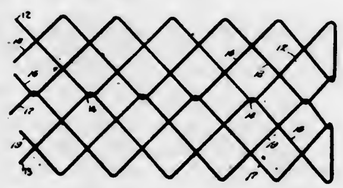
1,385,431. METHOD OF MAKING PAPER CENTERING CUPS OR THE LIKE. HAROLD DE OLANETA, New Haven, Conn., assignor to The Winchester Repeating Arms Company, New Haven, Conn. Filed June 28, 1920. Serial No. 392,287. 34 Claims. (Cl. 93—36.)

1. The method of making centering cups for dry cells, or the like, from fibrous material which includes shaping the upturned edge of the cup to form indentations or scallops therein.



1,385,432. COMBINED SCHOOL DESK AND CHAIR. PHILO O. DERRYSHIRE, Chicago, Ill., assignor to The Delaware Chair Company, Delaware, Ohio, a Corporation of Ohio. Filed Feb. 21, 1921. Serial No. 446,979. 2 Claims. (Cl. 155—128.)

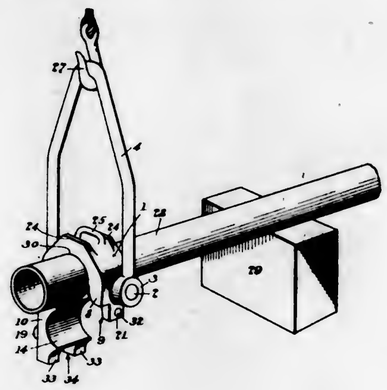
1. In a combined chair and desk, in combination, a chair; a flat standard secured to the chair at the front and side thereof, having in its upper portion a pair of apertures located side by side; a transversely extending horizontal top above the standard and in front of the chair; a pair of flat clamping members depending from the un-



derside of and secured to the top and embracing the apertured upper portion of the standard; and a pair of clamping bolts extending through the clamping members and the apertures in the standard, said apertures being larger than the bolts to permit horizontal, vertical and angular adjustment of the clamping members to vary the horizontal, vertical and angular positions of the top.

1,385,433. UNDERFEED-STOKER. WILLIAM EVANS DE VOE, Chicago Heights, Ill., assignor to The Under-Feed Stoker Company of America, Chicago, Ill., a Corporation of New Jersey. Filed June 9, 1919. Serial No. 302,784. 11 Claims. (Cl. 110—109.)

11. The combination with a battery of underfeed stokers each having a ram and a crank shaft, of a constantly-driven line shaft for driving said crank shafts, means associated with each crank-shaft for connecting it with the line shaft to receive a single rotation therefrom, and means associated with each crank shaft and driven from the line shaft for operating said connecting means at variable predetermined intervals.



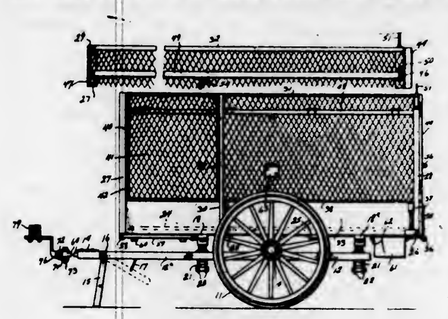
1,385,434. WIRE FABRIC. KASPAR I. DIETHELM, New York, N. Y. Filed Dec. 22, 1917. Serial No. 208,407. 1 Claim. (Cl. 245—8.)

In a fabric of the class described, a pair of zigzag strands looped at their adjacent corners, another pair of zigzag strands interlocked with said first pair and also looped at their adjacent corners and crossing said first pair substantially at right angles and between said corners, and a third pair of zigzag strands interlocked with said first two pairs, all of said strands being straight except at said corners.

1,385,435. WELL-ELEVATOR. WILLIAM LINCOLN DUNN, Oxnard, Calif., assignor to Dunn Manufacturing Company, Oxnard, Calif., a Corporation of California. Filed Apr. 9, 1919. Serial No. 288,759. 3 Claims. (Cl. 294—91.)

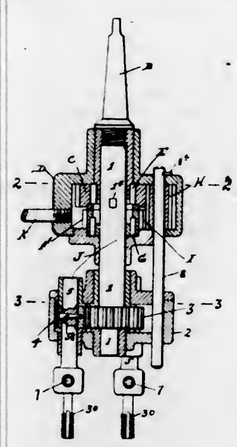
1. An elevator of the character described, comprising a substantially U-shaped body having a curved inner face to interengage the periphery of a casing section, a gate pivotally connected at one end with one end of said body, means for latching the other end of the gate to the other end of said body, said gate having a curved inner face, and

means upon said body for supporting the body on edge; said means comprising spaced feet, a handle being provided upon the body between the feet.



1,385,436. VALVE-LIFTING DEVICE. HERMANN EGLOFF, Los Angeles, Calif. Filed Sept. 4, 1919. Serial No. 321,698. 5 Claims. (Cl. 29—86.3.)

1. A valve lifting device, the combination with a valve and valve lifter, of means whereby upon movement of the valve lifter the valve is raised to a degree in excess of the rise of the valve lifter; said means comprising crossed levers.



1,385,437. AUTOMOBILE-TRAILER. EDWARD ELLERMAN, Littleton, Colo., assignor of fifty-one one-hundredths to J. Ernest Mitchell, Littleton, Colo. Filed July 21, 1920. Serial No. 397,910. 7 Claims. (Cl. 296—23.)

1. A trailer of the character described comprising a wheel supported frame having a draft connection, a body yieldingly supported upon said frame and having side and end walls of wire screen material, and sections constituting lids hinged to the side walls of the body adjacent the upper edges of the side walls and movable into a horisontal position or into an upright position, the frame of the body being provided with means whereby said lid may be

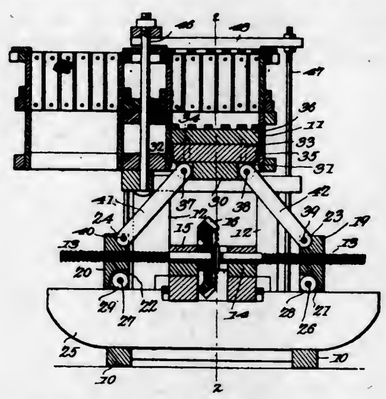
supported in a horizontal position to thereby constitute a support for an upper berth.

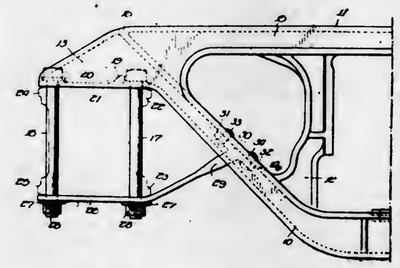
1,385,438. MULTIPLE TAPPING DEVICE AND SIMILAR TOOL. FRANKLIN ALFRED ERRINGTON, Stapleton, N. Y. Filed Nov. 20, 1919. Serial No. 339,313. 3 Claims. (Cl. 10—130.)

3. The combination with a main driving-spindle, of an axially located supplementary driven-spindle provided with a supplementary driven-gear journaled in a non-rotative housing, a plurality of pinions journaled in said housing and meshing with said driven-gear, each of said pinions having an axially located tool-holder connected to turn in unison therewith in a direction opposite to that of the main driving-spindle when said parts are in the driving-position, and means to reverse the direction of rotation of said supplementary driven-spindle to turn said tool-holders in the same direction of rotation as said main driving-spindle, substantially as described.

1,385,439. BALING-PRESS. WILLOUGHBY R. FLETCHER, Brinkman, Okla. Filed Mar. 22, 1920. Serial No. 367,902. 3 Claims. (Cl. 100—11.)

1. The combination with a baling press having a press box mounted upon a supporting frame, a screw reversely threaded at its opposite ends and mounted for rotation in said frame, a supporting track carried by said frame parallel to said screw and spaced therefrom, nuts carried by the reversely threaded end of said screw and bearing on said track and toggle levers connected to the nuts, of a follower head movable in said press box and having spaced guide studs extending therefrom, and a follower





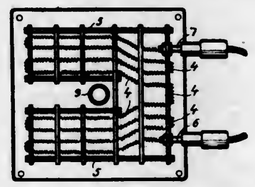


plate carried by said follower head and having spaced cavities for engagement with said guide studs, said toggle levers being pivoted by their respective ends in said nuts and follower head.

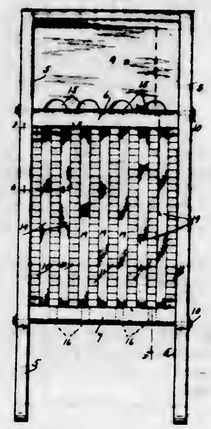
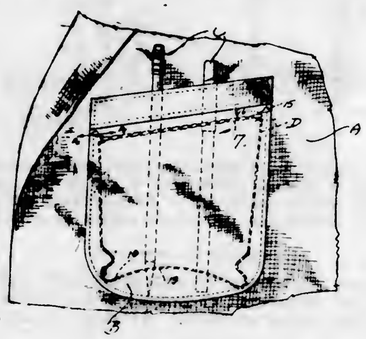
1,385,440. CONNECTION BETWEEN SIDE FRAMES AND TIE-BARS. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 8, 1920. Serial No. 372,224. 1 Claim. (Cl. 105—221.)

In combination, a truck side frame having a tension member of channel section with a web portion, and a journal box tie bar having a T-shaped head extending into the channel and permanently secured to said web.



1,385,441. ELECTRIC FLUID-HEATING APPARATUS. EDWARD FREDRIKSEN, Christiania, Norway. Filed Jan. 29, 1920. Serial No. 354,996. 4 Claims. (Cl. 219—39.)

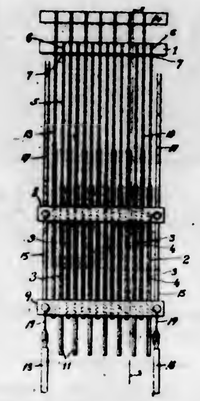
1. In apparatus of the character described, a liquid container, inlet and outlet tubes connected therewith,



a removable heating member operatively associated with said container, and a housing for said heating member removably connected to said container.

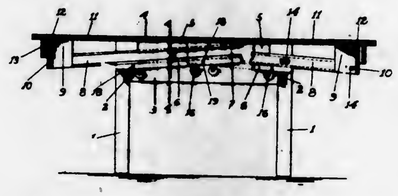
1,385,442. WASHBOARD. WILLIAM P. GRIFFITH and ANNA GRIFFITH, Minneapolis, Minn. Filed Jan. 7, 1921. Serial No. 435,618. 4 Claims. (Cl. 68—29.)

1. A wash board having a rubbing surface formed by alternating rows of brush bristles and rigid rubbing stripe, said bristles and stripe being extended longitudinally of the board and continuous in the direction of the rubbing action and both thereof being exposed where they will be engaged during the rubbing action.



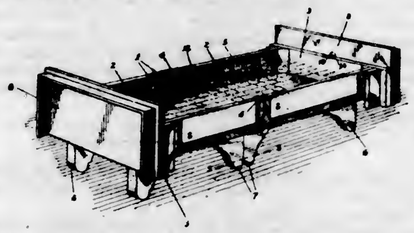
1,385,443. ARTICLE-HOLDER. MONRS GROSS, Berwick, Pa. Filed June 8, 1920. Serial No. 387,460. 3 Claims. (Cl. 24—10.)

1. In an article holder, the combination, of a resilient frame, comprising a pair of arms, one of said arms being longer than the other, a resilient connection secured to said arms, and a yieldable band connecting the free ends of said arms and angularly disposed with respect to said base connection.



1,385,444. WEAVING APPARATUS. WILLIAM F. GRUPE, Hudson Heights, N. J. Filed June 19, 1919. Serial No. 305,370. 3 Claims. (Cl. 139—14.)

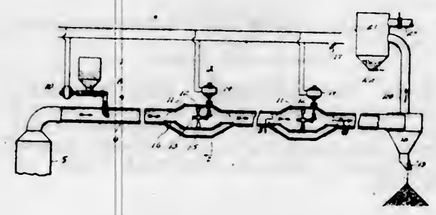
1. Weaving apparatus comprising a set of heddles, each heddle being formed of relatively stiff material, a lateral side of each heddle being provided with an eye having an open side, slotted guide means for said heddles, said heddles being disposed laterally side by side, means for



supporting and operating said heddles, and means disposed laterally of each heddle for effectively closing the open side of its eye and means for supporting said closing means.

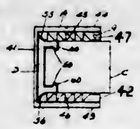
1,385,445. EXTENSION-TABLE. CHARLES H. GUNN, Oakland, Calif. Filed June 2, 1920. Serial No. 386,051. 2 Claims. (Cl. 45—115.)

1. An extension table comprising a fixed center top member, slides mounted under said top member and adapted to be moved horizontally, extension top members connected to corresponding slides, rigid bars forming the top guides for the slides, and vertically adjustable bars forming the lower guides for said slides.



1,385,446. COMBINATION BED AND TABLE. CHARLES H. GUNN, Oakland, Calif. Filed Nov. 9, 1920. Serial No. 422,789. 2 Claims. (Cl. 5—17.)

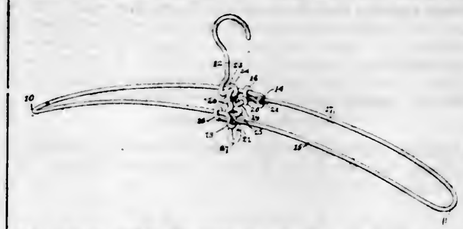
1. A combination bed and table comprising a pair of box like structures open on one face and hinged together at the edges adjacent the open face whereby they may



be opened out to serve as a bed area or folded together to serve as a table-support, the ends of the box like structure opposite the hinged ends serving as the table top, auxiliary table leaves hinged to the rigid tops transversely thereof and at opposite ends, legs projecting outwardly from the structures at their hinged ends and arranged to support the same both when used as a table and as a bed, and additional legs similarly disposed at the opposite ends of the structures from the first named legs and arranged to support the auxiliary leaves in horizontal alinement when the structure is used as a table and to sustain the weight of the opposite ends thereof when serving as a bed.

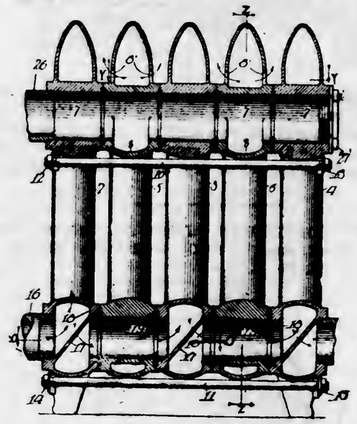
1,385,447. METHOD OF TRANSPORTING COAL. WILLIAM E. HAMILTON, Columbus, Ohio. Filed Feb. 8, 1918. Serial No. 215,995. 7 Claims. (Cl. 302—66.)

1. The process of transporting fuel such as coal, coke, or the like, for comparatively long distances, which consists in pulverizing the fuel, then introducing it with a carrying fluid which will make a non-explosive mixture with the fuel into a pipe line, and forcing the fluid and fuel through said pipe line.



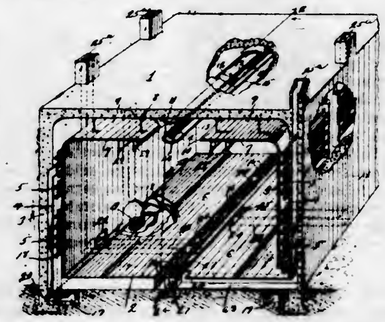
1,385,448. DOOR-BUFFER. JOHN H. HARWARD, Lawrence, Mass. Filed Mar. 21, 1921. Serial No. 454,058. 4 Claims. (Cl. 16—86.)

1. In a buffer for automobile doors, the combination of an attaching casing having a base, a back, an open top made with grooves, an open front, and opposite sides each provided with a plurality of teeth, with means to attach the base to the door jamb or a door coöperating therewith, a removable cover plate for the top slidable in the grooves thereof, a follower adapted to be inserted through the top having projections to engage said teeth and locking fingers, and an elastic contact member which projects from the front of the casing and engages the locking fingers of the follower.



1,385,449. COLLAPSIBLE GARMENT-HANGER. RUDOLPH B. HEINLE, Brooklyn, N. Y. Filed Feb. 24, 1921. Serial No. 447,371. 4 Claims. (Cl. 211—13.)

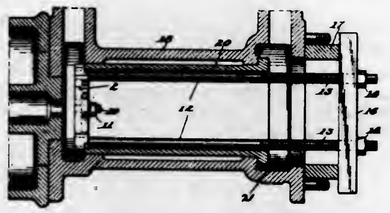
2. As a new article of manufacture, a garment hanger comprising a pair of telescoping U-shaped wire members provided with automatic locking means to hold the same in extended position; a cross member spanning the inner end of the U-shaped members; and a hook pivotally connected with said cross member to suspend the hanger,



and having means for engaging the cross member to lock the hook in upright position.

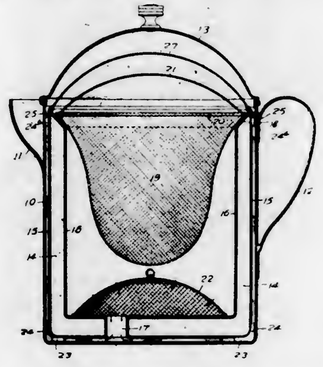
1,385,450. RADIATOR. WILLIAM R. HILDEBRAND, Chicago, Ill. Filed Apr. 18, 1918. Serial No. 229,302. 6 Claims. (Cl. 257—141.)

2. The combination in a radiator of alternate heating and air sections with an air-passage and a heating fluid passage passing through said sections, said air passage communicating with said air sections and said heating fluid passage communicating with said heating sections, and said air section passages having outlets therefrom open to the outer air.



1,385,451. DRY-KILN. JOSEPH F. HIRT, Chicago, Ill. Filed Apr. 20, 1920. Serial No. 375,212. 11 Claims. (Cl. 34—19.)

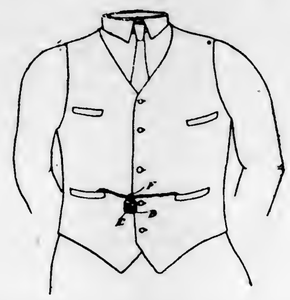
1. A kiln having a drying chamber and a heating chamber, means for circulating air through said chambers,



means whereby fresh air is admitted to the circulating air at a point where it will pass through the heating chamber before entering the kiln chamber thereby thoroughly mixing and heating the additional fresh air with the recirculating air, before entering the drying chamber, means for supplying humidity to the air before it enters the drying chamber, and means for varying the amount of humidity supplied to various portions of the kiln.

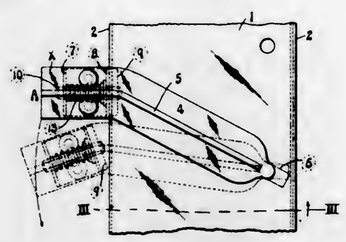
1,385,452. LINER-PULLER. FELIX HOFFMAN, Newport News, Va. Filed Apr. 8, 1919. Serial No. 288,489. 6 Claims. (Cl. 29—88.2.)

1. A liner puller comprising an adjustable device consisting of two members for engaging the end of a liner, and means comprising two members each of which engages one of the first named members for applying a pulling strain to said members first named for extracting the liner.



1,385,453. COFFEE-URN. JAMES A. HOLMAN, Salida, Colo. Filed Aug. 9, 1920. Serial No. 402,174. 3 Claims. (Cl. 53—3.)

1. In a coffee urn, outer and inner receptacles, said inner receptacle being provided with spaced walls affording therebetween a dead air space, spaced lugs extending intermediate the sides and bottom of said inner receptacle and said outer receptacle to afford therebetween circulation passages, said inner receptacle being provided in the bottom thereof with an outlet connecting the interior thereof with said circulation passages, said lugs being secured to said inner receptacle and a lug secured to said outer receptacle and abutting the upper surface of one of the lugs secured to said inner receptacle, whereby vertical displacement of said inner receptacle is prevented.

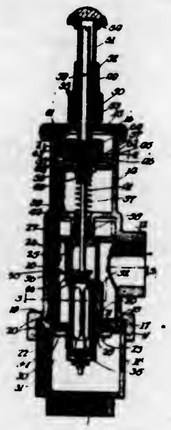


1,385,454. WATCH-CHARM. RALPH CLIFTON HOMAN, Chino, Calif. Filed Dec. 29, 1920. Serial No. 433,872. 2 Claims. (Cl. 40—1.5.)

1. A watch charm comprising a body of circular form, a plurality of emblems detachably mounted on the periphery of the body and comprising plates, and fastening members carried by the plates and penetrating said body for

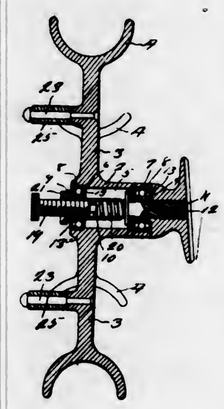
detachably securing the emblems in definite position upon the body.

1,385,455. TRACTION-WHEEL. HENRY W. KARDELL, University City, Mo., assignor to Kardell Tractor & Truck Company, St. Louis, Mo., a Corporation of Delaware. Filed June 8, 1918. Serial No. 239,037. Renewed June 6, 1921. Serial No. 475,556. 6 Claims. (Cl. 301—44.)



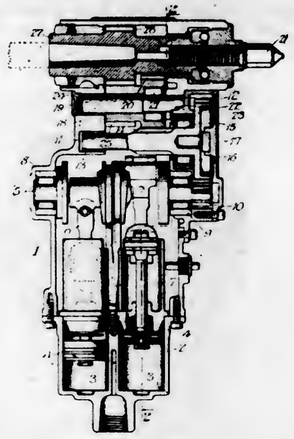
6. A traction wheel having a tread rim, traction spurs in the form of cleats arranged diagonally of said tread rim, one end of each of said cleats being provided with a pivotal extension projecting into and interlocked with said rim and the opposite end portion being provided with a hook adapted to interlock with one side of the rim, said hook having an abutment face engaging the side of the rim to limit pivotal movement of the cleat, each cleat being movable about the axis of its pivotal extension to permit its hook to be interlocked with and removed from the rim, and spring actuated latch devices whereby said hooks are retained in interlocking engagement with said rim, each of said spring actuated latch devices including a latch member located adjacent to the hook with which it is associated and a spring whereby said latch member is yieldingly retained in its locking position.

1,385,456. FLUSH-VALVE. EDWARD L. KELLAN, Chicago, Ill. Filed May 15, 1916. Serial No. 97,522. 2 Claims. (Cl. 137—93.)



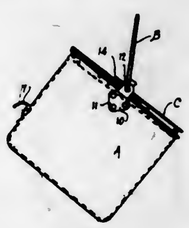
1. A flush valve of that kind which is controlled by differential pressures acting on the operative parts thereof from a source of liquid supply under pressure, comprising a casing provided with an inlet and with an outlet, a main valve between them, a relief valve controlling the main valve, a liquid controlled, regulable timing element in alinement with said relief valve for opening the relief valve and for timing the closing movement of the valve device, said timing element being separate from and removable independently of the relief valve and associated parts,

means cooperating with the relief valve for holding it and its associated parts closed and intact when the timing



element is removed, and means constructed to permit removal of the main valve without disturbing said timing element.

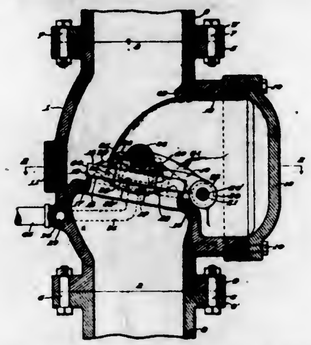
1,385,457. FISHING-REEL. HENRY A. KIEST, Knox, Ind. Filed Sept. 1, 1920. Serial No. 407,452. 3 Claims. (Cl. 242—84.5.)



1. A fishing reel comprising a reel seat, a reel spindle carried by said reel seat, a reel having a hub member mounted on ball bearings interposed between the interior of the hub and the spindle, a friction disk carried by the hub and surrounding the spindle, friction disks disposed within the hub and surrounding the spindle and in engagement with the first mentioned friction disk, said spindle being hollow and interiorly threaded, diametrically disposed elongated slots in said hollow spindle for the reception of a transversely disposed pin, said pin having its end in engagement with the friction disk, a tensioning screw threaded in the hollow spindle and a spring interposed between the transversely disposed pin and the end of the tensioning screw, said tensioning screw forming means for varying the friction between the friction disks.

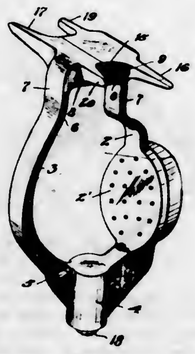
1,385,458. DRILL. HENRY J. KIMMAN, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 21, 1919. Serial No. 318,935. 3 Claims. (Cl. 77—6.)

1. A drill of the class described, comprising a casing, an engine therein including a main driving shaft, a drill spindle supported by the casing and operating connections between said shaft and spindle including a pinion at one end of the main driving shaft, a bearing for said shaft coacting with one end thereof and a second bearing for the shaft engaging an intermediate surface of said shaft, a main intermediate shaft mounted within the casing and having at one end a gear meshing with said pinion and provided intermediate its length with a pinion, a bearing for one end of said intermediate shaft, and a second bearing for said shaft cooperating therewith between the pinion and gear thereon, and a secondary shaft mounted within the casing and having disposed thereon a gear meshing with the pinion of the main intermediate shaft and also having a pinion, and a gear portion on said spindle meshing with said last mentioned pinion.



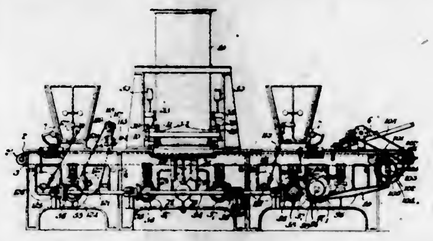
1,385,459. COOKING-RECEPTACLE. JAY M. LAWRENCE, St. Paul, Minn. Filed Nov. 5, 1920. Serial No. 422,029. 2 Claims. (Cl. 53—1.)

2. A receptacle, comprising a body, a cover on said body having obstructions spaced apart on its lower side to provide pouring spaces and adapted to nest freely in the open end of the receptacle, to limit side movement of the cover and prevent the cover from sliding off of the body, a bail ear on said body having a stop and a bail hinged in said bail ear having a cover engagement limiting the upward movement of the cover and permitting the cover to tilt open when the body is tilted in the pouring operation, said stop being positioned in the path of the



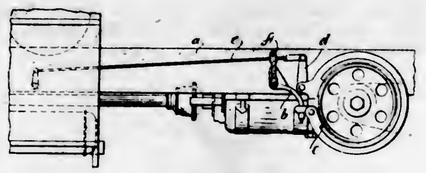
ball to obstruct the movement of the ball and cause the ball to coöperate with said obstructions in preventing the cover from being entirely removed from the body.

1,385,460. ALARM CHECK-VALVE. LEROY M. LEWIS, Philadelphia, Pa., assignor to Owen B. Lewis, Baltimore, Md. Filed Oct. 28, 1919. Serial No. 333,944. 5 Claims. (Cl. 169—23.)



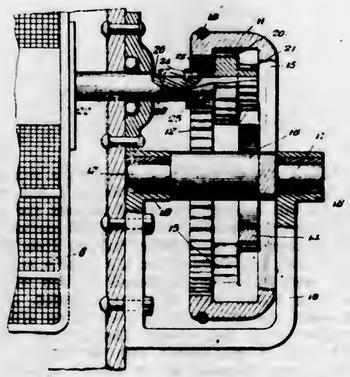
1. In an alarm check valve comprising a casing having inlet and outlet passages and a main check valve pivotally supported therein, the combination of an auxiliary check valve located in said casing and provided with an adjustable sleeve, a valve freely movable therein, an auxiliary valve seat located in said casing adjacent to the seat of said main check valve, passages provided within said casing communicating with said auxiliary valve and the exterior of said casing, an arm for said auxiliary valve extending over and contacting with said main check valve, said arm pivotally mounted upon the same axis as the main check valve, said auxiliary valve and said auxiliary valve seat being located at a substantially shorter distance from said axis than the outer portion of said main valve whereby the opening of said auxiliary valve is proportionately smaller than that of the portion of said main valve remotely located from said axis.

1,385,461. THEFT-WARNING AUTOMOBILE-LOCK. JOHN K. MCDONALD, Los Angeles, Calif., assignor to Theft Warning Auto Lock Corporation, Los Angeles, Calif., a Corporation of California. Filed June 21, 1920. Serial No. 390,361. 11 Claims. (Cl. 70—90.)



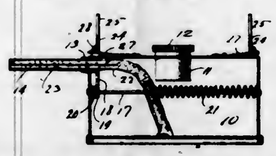
9. A theft-warning automobile lock comprising a pair of side arms lockable around the tire and felly between spokes of a wheel, and guard lugs extending from opposite sides of each arm toward, and adapted to abut, the adjacent spoke upon rotation of the applied device around the tire and felly.

1,385,462. CANDY AND CHOCOLATE MACHINE. SYLVESTER S. MARVIN, Bryn Mawr, and WILLIAM MUNS, Philadelphia, Pa., assignors to Pennsylvania Chocolate Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1919. Serial No. 337,211. 26 Claims. (Cl. 107—1.)



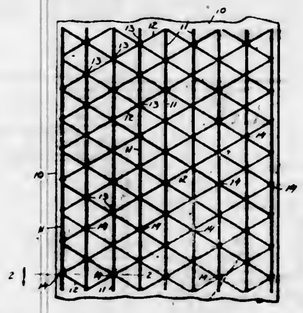
1. In a machine of the character described, the combination with mechanism for feeding trays and mechanism for measuring and depositing a plastic material on said trays, of means for depositing nuts on said material and means for pressing said nuts into said material.

1,385,463. YIELDING SUPPORT FOR BRAKE-RODS. ALFRED F. MASURY and AUGUST H. LEIPERT, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 6, 1920. Serial No. 428,472. 4 Claims. (Cl. 188—205.)



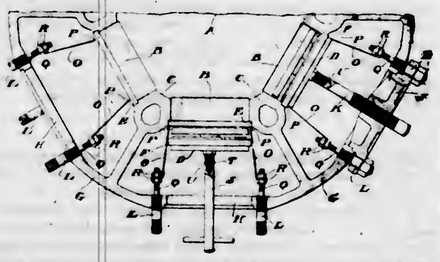
1. As an article of manufacture a support for a brake rod comprising a block of stiff but yielding material adapted to be supported on the chassis of a vehicle and to be secured to the brake rod.

1,385,464. GEARING FOR WASHING-MACHINES. FRANK HOWARD MAYER, Denver, Colo. Filed Jan. 17, 1920. Serial No. 352,097. 5 Claims. (Cl. 74—50.)



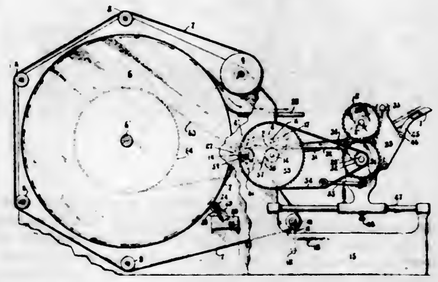
1. Gearing, including a rotatable shaft, with a shiftable two-diameter pinion, and a uni-directionally driven master gear with mutilated gear portions for oscillating said shaft when the two-diameter pinion is in registration therewith, and with a continuous gear for revolving said shaft when a corresponding portion of said pinion is shifted into engagement therewith.

1,385,465. CURLING-IRON HEATER. STANLEY MILAM, Augusta, Mont. Filed Mar. 27, 1920. Serial No. 369,210. 5 Claims. (Cl. 158—35.)



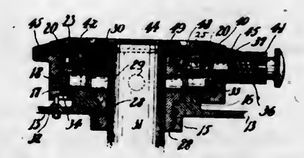
1. A heater of the class described comprising a casing, a burner tube slidably mounted in said casing and adapted to be recessed within the same when the tube is in inoperative position, means within the casing for projecting said tube therefrom toward its operative position, and means for retaining said burner tube in its inoperative position against the action of the last named means.

1,385,466. PLASTER-GROUND. ALBERT OLIVER, New York, N. Y. Filed June 28, 1919. Serial No. 307,399. 3 Claims. (Cl. 20—13.)



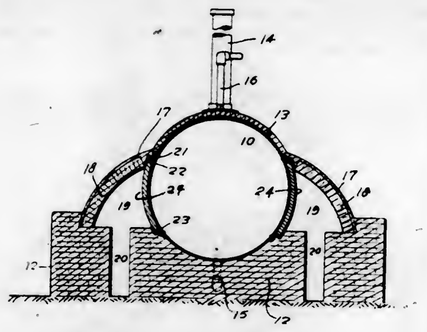
1. An article as characterized comprising, a continuous sheet of flexible fibrous material; a reinforce for said fibrous material embodying a plurality of straight suspension rods disposed in parallel spaced relation; and a binding medium, said medium consisting in a wire interwoven between said rods, said wire being wrapped on said rods.

1,385,467. VALVE-SEAT RETAINER. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 9, 1920. Serial No. 422,977. 3 Claims. (Cl. 103—53.)



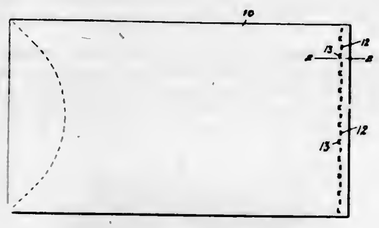
1. In a compressor, a compressor head having a valve seat opening in its inner wall adapted to receive a valve seat carrying a valve, the outer wall of the head having a corresponding opening adapted to be closed by a cover carrying an adjustable valve securing device, and spring fingers supported from inside the outer wall adjacent the cover opening and extending into proximity to the valve seat opening in the inner wall for retaining a valve seat in position in the valve seat opening until the cover and valve securing device are adjusted.

1,385,468. MEANS FOR FEEDING SHEET MATERIAL. CHARLES F. PFLANZE, St. Louis, Mo. Filed Nov. 23, 1917. Serial No. 203,523. 8 Claims. (Cl. 271—37.)



2. In a machine for feeding and arranging sheets of material to expose marginal portions thereof, a high speed rotary transmission device whereby individual sheets are discharged one over the other, and an accumulator whereby the sheets are retarded and caused to accumulate in a long continuous pile, said accumulator including a support arranged in advance of said high speed rotary transmission device to receive the sheets discharged therefrom, and a low speed feeding device comprising a pair of rotary feed rolls arranged in advance of said support to feed the sheets therefrom.

1,385,469. LOCKING DEVICE FOR THE STEERING-WHEELS OF MOTOR-VEHICLES. ROBERT ARCHIBALD PYKE, Colac, Victoria, Australia. Filed Jan. 7, 1920. Serial No. 349,963. 13 Claims. (Cl. 70—129.)



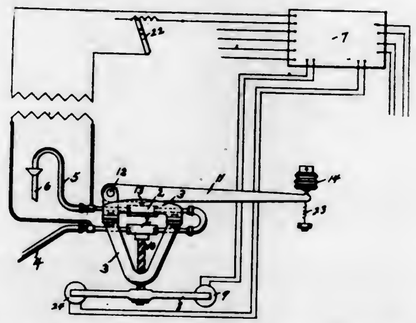
1. The combination with the steering wheel and post of a motor vehicle, of a core secured to said post for rotation therewith and provided with a plurality of radial openings, a barrel secured to said wheel and encircling said core for rotation relatively thereto, slidable members carried by said barrel and adapted to engage the openings in the core thereby to secure the barrel and core for rotation together, means normally holding said members out of engagement with said openings, a cam cup mounted for rotation on said barrel and having a plurality of cams for operating said slidable members into engagement with said openings, and means for locking said barrel with its slidable members both in and out of engagement with the openings.

1,385,470. RETORT. EDWIN E. QUINKER, Valdosta, Ga. Filed May 24, 1920. Serial No. 383,884. 7 Claims. (Cl. 203—6.)

1. In a retort construction, a base of refractory material, a retort supported upon the base, the middle portion of the retort being protected by the base and the base extending laterally on each side beyond the retort, arches extending upward from the base toward the upper portion of the retort on each side and defining with the base longitudinally extending fire passages, and shield plates of heat conducting material disposed along the opposite sides of the retort and coinciding with said fire passages.

1,385,471. ENVELOP. EDWARD J. REILLY, Baltimore, Md. Filed June 21, 1920. Serial No. 390,389. 1 Claim. (Cl. 229—85.)

An envelop having alternating tongues and slits in its opposite walls adjacent one of its folds, and extending from near one edge to near the other, the tongues of one wall being disposed opposite the slits of the other wall and extending through the slits of the same.

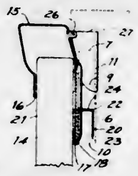


1,385,472. SPRINKLING-HOSE HOLDER. GEORGE B. RENN, Los Angeles, Calif. Filed Oct. 5, 1920. Serial No. 414,759. 1 Claim. (Cl. 248—29.)

In a sprinkling-hose holder, a standard, a sliding member shiftable and turnable on the standard, a stem on the sliding member normally projecting radially from the standard, a sleeve member shiftable and turnable on the stem of the sliding member having a pin projecting sidewise from the sleeve forming the pivot pin for clamping members, clamping jaws engaging with the pin of the sleeve member, handles provided on the clamping jaws projecting beyond the pivot support, and a spring disposed between the handles so as to normally press the handles

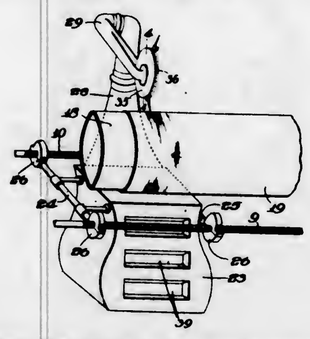
apart for holding the clamping jaws in a normally closed and clamping position.

1,385,473. AUTOMATIC ELECTRICAL HEAT-TREATING DEVICE. THOMAS J. RICHARDS, Youngstown, Ohio. Filed Aug. 25, 1919. Serial No. 319,571. 1 Claim. (Cl. 148—10.)



In a device of the class described, the combination of two support members, two water cooled electrodes positioned diametrically opposite each other and secured within said support members, a screw member having one end registering with one of said electrodes, a threaded opening centrally located in one of said support members, an arm securely fastened to the other end of said screw member, solenoids located under outer ends of said arm and connected to ends of said arm, means for operating said solenoids, a lever pivoted to one of said support members, a dog formed on the side of said lever, said dog located so as to register with outer surface of an electrode, a coil spring positioned at outer end of above mentioned arm, substantially as described for the purpose set forth.

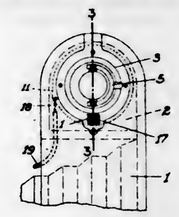
1,385,474. DETACHABLE RETAINER FOR MATCHES. MAX ROPE, Kansas City, Mo. Filed Jan. 22, 1917. Serial No. 143,673. 1 Claim. (Cl. 224—29.)



In a detachable retainer for ordinary match boxes, a bearing plate adapted to engage an automobile door, a sheet metal plate attached to the lower edge of said bearing plate and extending upwardly near said bearing plate but separated therefrom and forming a rectangular flat base to receive and retain a match box allowing the match

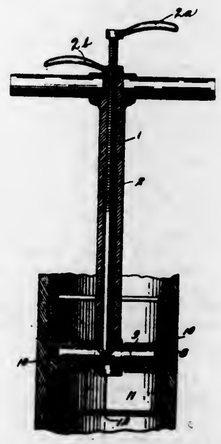
box cover to slide down over the base to near the bottom of said bearing plate, a spring projecting upwardly from said bearing plate and then outwardly from said bearing plate and then downwardly alongside of said bearing plate, the outwardly and downwardly projecting end of

said spring separated from said bearing plate to span and grip an automobile door and bind said bearing plate thereto, a lid hingedly connected to said spring and provided with closed sides so that when said lid is closed over a match box it will protect the match box and any matches therein from the weather.



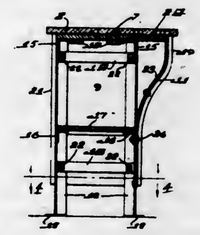
1,385,475. SOUND-REPRODUCING MACHINE. JOSEPH ROSSI, Philadelphia, Pa. Filed Dec. 22, 1919. Serial No. 346,624. 1 Claim. (Cl. 274—20.)

A machine of the character described including an elongated rotatable record; two shafts spaced apart and extending in the direction of the length of the record, at least one of said shafts being rotatable and having screw threads; a cabinet having a sound outlet; reproducing means carried by the cabinet and adapted to engage said record whereby the reproduced sound will pass out of said outlet; and transversely extending suspension means for said cabinet having parts engaging said shafts whereby the cabinet is supported jointly by said shafts, said parts having screw threaded portions for engaging said shaft screw threads, said parts being located adjacent opposite sides of the cabinet whereby the cabinet is supported at distances apart in the direction of the lengths of said shafts; substantially as described.



1,385,476. CAMERA-SHUTTER CONTROL. BENJAMIN F. SCHMIDT, Exeter, Calif. Filed July 5, 1919. Serial No. 308,764. 3 Claims. (Cl. 95—31.)

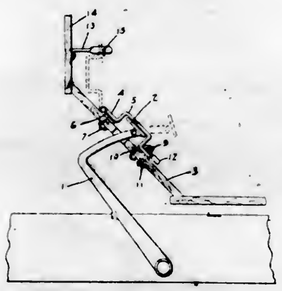
1. In combination with the spool winding shaft of a film-roll camera having a shutter actuated by a spring-pulled cable, a ratchet wheel mounted on the shaft and turnable therewith, a plate mounted on the hub of the wheel and turnable thereon, a spring-pressed pawl on said plate adapted to engage the ratchet wheel, and a cable attached to the plate and extending to and branching from the shutter cable and movable therewith, the teeth on the wheel being so positioned that the pawl on the plate will freely slide over said teeth when the plate is turned by the moving of the cable to actuate the shutter, said direction of movement being opposite to the direction of rota-



tion of the ratchet wheel when the latter is turned to wind the film-spool.

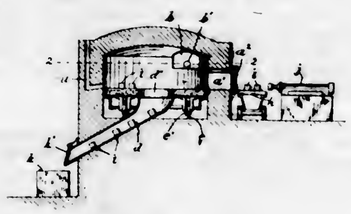
1,385,477. ADJUSTABLE TOOL. JOHN FREDERICK SEMONES, Union City, Tenn. Filed Mar. 8, 1920. Serial No. 364,349. 5 Claims. (Cl. 33—178.)

1. A device of the type described, including a threaded shaft having a tapered end, a tubular member receiving said shaft and having lateral tubular extensions, said shaft having a movement longitudinally of said tubular member, pins arranged within said tubular extensions and provided with tapered ends adapted to be engaged by the tapered end of said shaft, and a split cylindrical member adapted to be expanded by said pins.



1,385,478. COUNTER CONSTRUCTION. JOHN SHEMILT, Rockford, Ill. Filed Nov. 4, 1920. Serial No. 421,654. 6 Claims. (Cl. 211—11.)

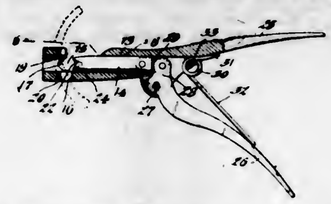
6. In a counter construction, a frame structure having ends each provided with an overhang portion, and means



on said ends for guiding an overhang front panel into position, an overhang front panel interposed between said overhang portions and adapted to be guided into position by said means, and a counter top supported on the frame.

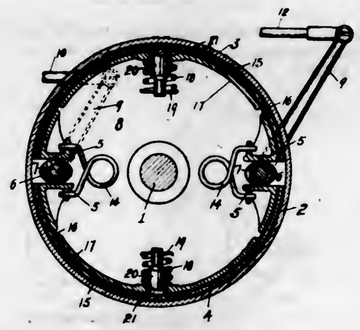
1,385,479. AUTOMOBILE-LOCK. FRANK STANLEY, Newcastle, Ind. Filed Oct. 4, 1920. Serial No. 414,476. 2 Claims. (Cl. 70—128.)

1. The combination with the foot lever of an automobile, of a latch for locking said foot lever against operation, said latch having an upwardly bowed portion between its ends for fitting over the end of the foot lever and having a slot in one end thereof, a plate attached to parts of the automobile, means for hinging one end of the latch to said plate, a staple also attached to parts of the automobile adapted to pass through said slot in the latch when in locking position, means for locking the latch to said staple, and a bracket secured to parts of the automobile above the latch adapted to pass through the slot therein when elevated for supporting the locking latch in vertical position.



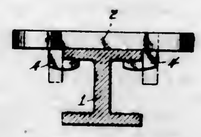
1,385,480. FURNACE WITH ROTATABLE HEARTH. MORTON A. TURTLE, East Orange, N. J., assignor to W. S. Rockwell Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 10, 1920. Serial No. 357,763. 12 Claims. (Cl. 263—26.)

1. A heat-treating furnace provided with a rotatable hearth having a discharge aperture therethrough, means for rotating the hearth and a chute beneath the aperture to receive the discharged material.



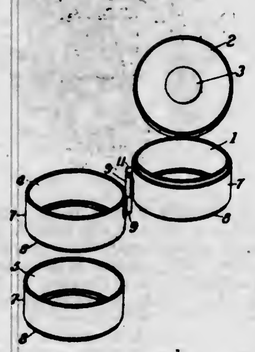
1,385,481. BENDER FOR BARS, RODS, AND WIRES. REGINALD V. WILLIAMS, Buffalo, N. Y. Filed May 17, 1920. Serial No. 381,801. 8 Claims. (Cl. 81—15.)

4. A bar bender comprising a barrel provided at its front end with two pairs of concave seats, the members of each pair being arranged on opposite sides of the barrel and at right angles to the seats of the other pair, either of said pairs of seats being adapted to receive the bar to be bent in a position crosswise of the barrel, and



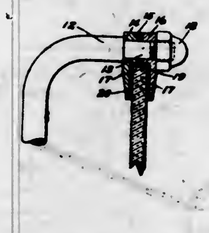
a plunger guided in said barrel and adapted to engage its front end with said bar between said pairs of seats.

1,385,482. INTERNAL EXPANDING BRAKE. GEORGE M. CARTER, Findlay, Ohio, assignor of one-half to Ralph H. Rosenberg, Findlay, Ohio. Filed May 16, 1919. Serial No. 297,597. 1 Claim. (Cl. 188—78.)



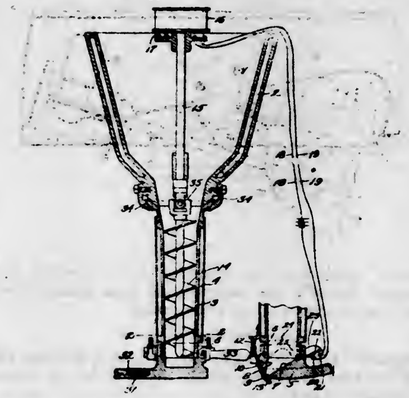
An internal expanding brake, comprising a drum, a pair of opposed segments internally of the drum at opposite sides of its axis, each segment comprising a segmental carrying strip, a fibrous facing strip applied thereto, a thrust member carried by the carrying strip at the inner side of each end portion thereof, a reinforcing backing member at the inner side of the carrying strip intermediate said thrust members, and means yieldingly retaining the reinforcing member in engagement with the carrying strip, an expanding cam between each set of opposed thrust members, and separate means connected to said cams and independently operable to effect an expansion of the segments.

1,385,483. METHOD OF MAKING VEHICLE-AXLES. GEORGE MILLER CARTER, Findlay, Ohio, assignor of one-half to Ralph H. Rosenberg, Findlay, Ohio. Filed May 20, 1920. Serial No. 382,781. 3 Claims. (Cl. 29—153.)



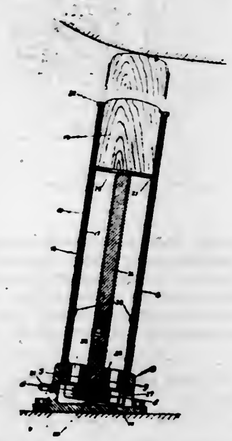
1. The method of producing an axle with an integral spring pad, consisting in providing the axle with opposed side flanges, providing a plate having bendable depending members spaced transversely of the axle, placing the plate on the axle top to form a spring pad therefor with its depending members disposed at opposite sides of the axle, bending the members under the side flanges of the axle in firm engagement therewith, and then treating the plate and axle to integrally unite the two.

1,385,484. COMPARTMENT-BOX. WILLIAM A. CASE, Plainfield, N. J., assignor of two-thirds to Simon Gottschall, New York, N. Y., and one-third to Eichengreen Sales Corporation, New York, N. Y., a Corporation of New York. Filed June 16, 1919. Serial No. 304,575. 7 Claims. (Cl. 220—4.)



1. In a compartment box, a plurality of boxes which, in tiered position, partly telescope with each other with a close fit all around so that each superjacent box prevents egress and ingress of material of the kind specified from the subjacent box and in which, in stepped position, the interior of each subjacent box is accessible from above for filling and dispensing, a swinging connection maintaining the boxes upright while swinging between tiered and stepped positions, and a spring between adjacent boxes tending to retain the boxes in telescoped position but permitting vertical displacement therebetween.

1,385,485. WIND-DEFLECTOR. GUY COMBIE, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,534. 1 Claim. (Cl. 296—84.)

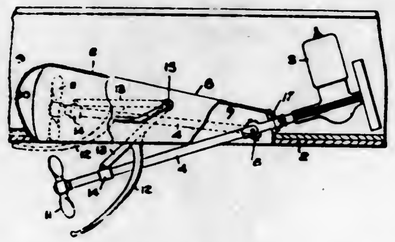


A wind deflector, comprising a shield member, a rod extending lengthwise of said shield member and having its ends bent over the ends of said shield member, said ends having reduced end portions, clamping members pivoted upon said reduced end portions and adapted to engage opposite surfaces of the edges of the shield member, retaining nuts threaded upon the reduced end portions and arranged to clamp said clamping members against said shield, and means for supporting said rod from the windshield of a motor vehicle.

1,385,486. SHOE-BOTTOM-FILLING MACHINE. OLIVER D. HOGUE, Brookline, Mass., assignor to George H. Maxwell, Phoenix, Ariz. Filed Nov. 5, 1919. Serial No. 335,860. 10 Claims. (Cl. 18—1.)

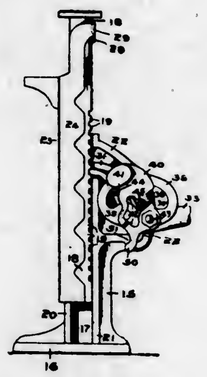
1. A shoe bottom filling machine, comprising a filler holding chamber having a delivery orifice, combined with means for controlling said orifice and means for suddenly ejecting the filler therefrom, both of said means being under the control of the operator.

1,385,487. BILGE-BLOCK. KARL R. KENNISON, Boston, Mass. Filed June 24, 1920. Serial No. 391,420. 8 Claims. (Cl. 61—66.)



1. A bilge block having, in combination, a base, a cylindrical casing fast thereto and extending upwardly therefrom, a block adapted to engage the hull of a vessel, a tube containing and fast to said block and slidable in said casing, a nut fast to the lower end of said tube, a screw of substantially smaller diameter than the diameter of said tube engaging said nut and projecting into said tube and means to impart a rotary motion to said screw whereby a reciprocatory motion may be imparted to said tube and block.

1,385,488. DISAPPEARING-PROPELLER DEVICE FOR BOATS. ANDREW DYAS MACLEAN, Toronto, Ontario, Canada. Filed Feb. 5, 1921. Serial No. 442,802. 3 Claims. (Cl. 115—41.)

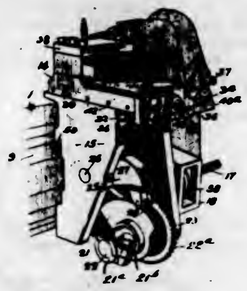


1. In disappearing propeller devices for boats: the combination with the propeller, of a propeller casing

open at the bottom, said casing having a forward flume portion, and an outwardly flaring main portion terminating in a suitably curved after end causing the rearwardly

moving water from the propeller to be directed in a forward direction for reversing the boat upon the propeller being drawn up into the casing.

1,385,489. LIFTING-JACK. ALBERT NEAL, Kokomo, Ind. Filed June 14, 1920. Serial No. 388,764. 3 Claims. (Cl. 254—111.)

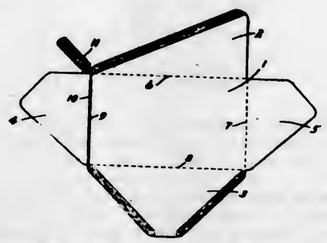


1. In a lifting jack, a channeled standard, a toothed lifting-bar moving in the channel of said standard, and a movable guide-bar having independent movement of the standard and adapted to extend across the edge and one side of the standard and the exposed side of the lifting-bar for maintaining the alinement of the associated parts.

1,385,490. STAMP OR SEAL. RUBEN PEREZ, Buenos Aires, Argentina. Filed Mar. 12, 1920. Serial No. 365,304. 4 Claims. (Cl. 101—405.)

1. In a stamp or seal, the combination of a printing surface composed of a permanent or stationary part and a removable or changeable part, means for removing or changing the said removable or changeable part, means for holding in operative position the said movable part, and means consisting of a sliding carrier whereby the changeable part may be protruded above the level of the permanent printing surface part and the changeable part removed or introduced in said carrier.

1,385,491. BACK-FACING ATTACHMENT FOR LATHES. GEORGE G. PORTER, Syracuse, N. Y., assignor to The Porter-Cable Machine Company, Syracuse, N. Y., a Corporation of New York. Filed Aug. 9, 1917. Serial No. 185,262. 14 Claims. (Cl. 82—2.)



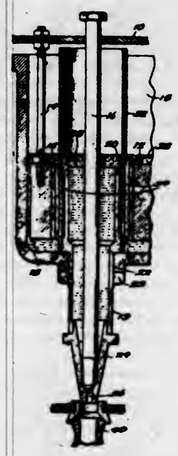
I. The combination with a lathe, comprising a bed having a guide on the rear side thereof, and a tool carriage feedable automatically along the bed in front of the axis of the lathe spindles, a frame mounted on the guide and adjustable along the same in the rear of the axis of the lathe spindles, a second tool carriage carried by the frame, and movable thereon in a direction crosswise of the axis of the lathe spindles, means for feeding the first tool carriage including a driving element, and means moving the second tool carriage cross wise of said axis during the feeding of the former tool carriage, the latter means being connected to said element, substantially as and for the purpose described.

1,385,492. MACHINE FOR ENAMELING PLATES AND THE LIKE. ROBERT H. PRICHARD, Los Angeles, Calif. Filed Jan. 9, 1920. Serial No. 352,227. 8 Claims. (Cl. 91—55.)

1. An enameling machine comprising a plurality of spaced enameling units, belt conveyers connecting said units for holding the articles flatwise, inclosed channels for receiving said conveyers, and means for forcing air through said channels.

1,385,493. ENVELOP. LESTER J. PUTNEY, Los Angeles, Calif. Filed Sept. 25, 1919. Serial No. 326,351. 1 Claim. (Cl. 229—86.)

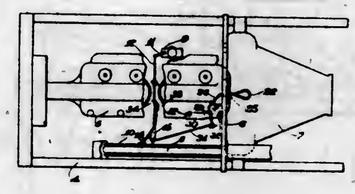
The combination with an envelop of an opening device comprising a tab, one of the faces of which is partially



coated with an adhesive, a cord having its end portion secured and arranged adjacent to the edge of said tab to form a reinforcement therefor, and the body portion of said cord occupying a position within and being secured to the envelop immediately adjacent to one of the folds thereof.

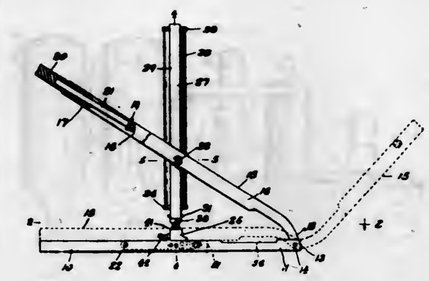
1,385,494. CONVERTIBLE HAT. BERNICE RADLEY, Peoria, Ill. Filed Apr. 2, 1920. Serial No. 370,842. 1 Claim. (Cl. 2—108.)

In a convertible hat, the combination of a separate brim having an upstanding portion provided with a series of openings in its upper edge, a crown portion to engage over the said upstanding portion with its edge lying upon the brim, and a series of ribbons secured in the crown at substantially the same height as the openings of the upstanding portion and adapted to be passed through and tied at said openings for holding the parts of the hat together.



1,385,495. NON-FOAMING MEASURING CUP. ARTHUR I. RISSER, Chicago, Ill., assignor to U. S. Bottlers Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 6, 1920. Serial No. 415,008. 9 Claims. (Cl. 226—106.)

1. In mechanism of the class described, an open mouthed cup and stationary means around the cup providing passages from points below the edge of the cup upward to the edge of the cup, for the purposes set forth.

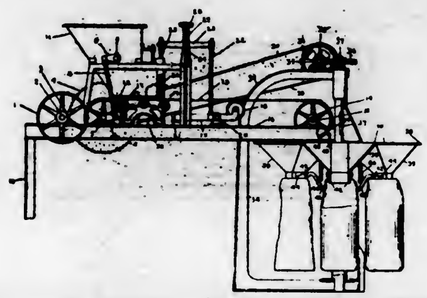


1,385,496. ACCELERATOR FOR AUTOMOBILES. AUGUST C. ROSENBROOK, Madison, Wis. Filed Nov. 3, 1919. Serial No. 335,441. 2 Claims. (Cl. 74—39.)

2. In an automobile, the combination of the arm on the rotatable throttle control rod, a foot operated lever, a throttle link, and a member having connection with said arm, lever and link, said member having a stop

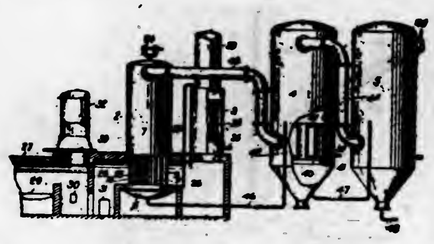
portion to limit the swinging movement of said link in one direction.

1,385,497. AIR-PUMP. PATRICK M. SCANLAN, Brooklyn, N. Y. Filed Sept. 10, 1919. Serial No. 322,817. Renewed Jan. 27, 1921. Serial No. 440,529. 7 Claims. (Cl. 230—27.)



7. A pump device of the class described comprising a substantially U-shaped base, a supplemental base member pivotally mounted between the sides of said base adjacent to the cross head end thereof, a lever pivotally mounted between the sides of said base adjacent to the cross head end thereof, a lever pivotally mounted in connection with the free ends of the sides of said base, a pump mechanism involving a cylinder, a piston and a rod connected with said piston in passing out through one end of said cylinder, a frame member in which said cylinder is mounted, means for pivotally connecting said lever with said frame member, means for pivotally connecting the protruding end of said rod with said supplemental base member, said supplemental base member being adapted to be moved into two positions within said base in folding the separate parts of the pump together and extending the same when in use, and a catch device for locking for supplemental base member in connection with said base when the parts of the pump are in operative position.

1,385,498. PACKAGING MECHANISM. JOHN C. SCHAFFER, Tiffin, Ohio. Filed Apr. 26, 1915. Serial No. 24,172. 6 Claims. (Cl. 226—61.)

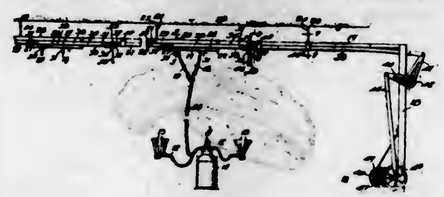


1. A supply way for material, means for maintaining material flow of the way continuous, and uniforms for equal lineal portions giving equal weights, including a conveyer belt, receivers beyond the conveyer belt to which

the way delivers, and driving means between the belt and receivers including relatively movable members succes-

sively shifting the receivers for separating a definitely weighed flow portion from the way for each receiver.

1,385,499. EVAPORATOR. HENRY G. SCHWARZ, Denver, Colo. Filed June 25, 1918. Serial No. 241,890. 3 Claims. (Cl. 127—18.)



2. In a system for the concentration of liquids, the combination of a substantially horizontal flue, an evaporator comprising two closed chambers disposed respectively above and below a determined portion of the flue, the upper chamber having an opening for the escape of vapors and the lower chamber having an opening for the discharge of material of increased density, circulation tubes and heating tubes of relatively smaller diameter, which connect the chambers and pass transversely through the flue, the heating tubes being disposed foremost with relation to the direction of the flow of gases from the furnace whereby to shelter the circulation tubes, and a conduit for feeding liquid to the evaporator.

1,385,500. COW-MILKING APPARATUS. WARREN A. SHIPPERT, Chicago, Ill., assignor to The Burton Page Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1918. Serial No. 258,357. Renewed Dec. 17, 1920. Serial No. 431,499. 22 Claims. (Cl. 31—98.)

1. In milking apparatus, the combination with a series of stations at which milk receiving means are adapted to be positioned, of a series of milking pumps, one arranged adjacent each of said stations, a driving element and means for severally operatively connecting or disconnecting said pumps from said driving element.

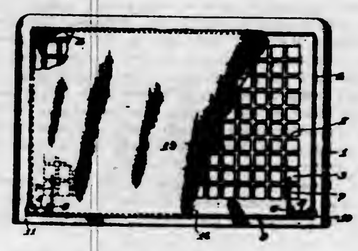
7. In milking apparatus, the combination with milk receiving means, of a plurality of milking pumps comprising, in each case, a fixed cylinder and a piston and rod reciprocable and revoluble in said cylinder, the piston rod being formed with a bend at its extremity, a reciprocating driving element provided with means adapted to be engaged by the bent extremities of said piston rods whereby the pumps may be operatively connected with or may be disconnected from said driving element, and a pair of cranks for each piston rod connected at opposite sides to the end of the bent portion of the piston rod provided with pull members for the purpose described.

10. In milking apparatus, the combination of a supporting structure comprising timbers secured end to end and means for suspending the same from the ceiling of the cow barn, a plurality of milking pumps fixed to said structure, a driving element comprising a plurality of wooden strips arranged end to end in spaced relation, and a pair of spaced metal straps connecting each strip with the adjacent strip and lying on opposite sides of said pumps, stirrup members attached to the supporting structure for slidably sustaining the driving element, means for reciprocating said driving element and coöperating engaging devices associated with the driving element and pumps whereby the pumps may be operatively connected with or disconnected from the driving element.

12. In milking apparatus, the combination of a horizontal supporting member, a plurality of pump cylinders secured thereto at intervals, a driving element slidably arranged on said support having portions which extend around the pump cylinders, pistons in said cylinders having piston rods, the extremities of which are formed with bends, engaging devices on said driving element with which, through rotation of the pistons and piston rods the bends of the piston rods may be engaged by said driving element, the bent ends of the piston rods being provided, in each case, with a pair of oppositely arranged cranks, and pull members for the purpose described.

17. In a cow milking apparatus, the combination of an upright support, a rock shaft mounted on said support provided with a pair of rigid arms standing at an angle to each other, means attached to one of said arms for rocking said rock shaft, a horizontal support fixed at one end to the upright support and provided with means for suspending it from the ceiling of the cow barn, a plurality of pump cylinders secured to the under side of said horizontal support, a driving element pivoted to the other arm on the rock shaft and comprising members arranged end to end in spaced relation and straps connecting said members which lie on opposite sides of said pump cylinders, pistons in said pump cylinders having piston rods the ends of which are bent and provided with oppositely projecting cranks having pull members, and means on said driving element providing pairs of depending lugs with which the bent ends of said piston rods are adapted to be releasably engaged.

1,385,501. DRILL-CHUCK. HARRY B. SHREVE, Chicago, Ill., assignor to Lovejoy Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1917. Serial No. 140,660. 3 Claims. (Cl. 279—56.)

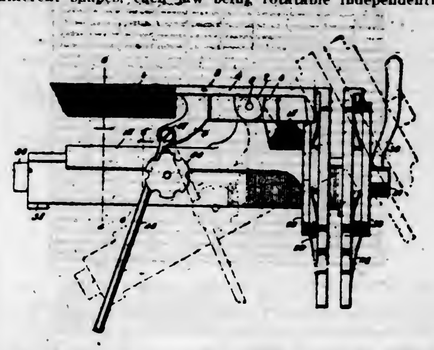


1. In a chuck, the combination of an axially bored head provided with oppositely arranged longitudinally extending slots, a stop extending through said slots and out of the head at each side, and a collar rotatably embracing the ends of said stop, said collar being adapted to engage the

head and hold the stop in desired position, said collar and stop being slidably movable longitudinally of said head,

and coöperating threads on said collar and head for locking said collar and stop in adjusted positions.

1,385,502. AIR-FILTER. FLORENCE E. SMITH and FRED B. SMITH, Detroit, Mich. Filed Dec. 20, 1920. Serial No. 431,861. 3 Claims. (Cl. 183—51.)



1. A filter adapted for attachment to a support, said filter comprising an inverted U shaped frame having hook shaped ends which may be sprung into engagement with the support to stress the frame and cause said frame to frictionally engage the support, a rod having coiled ends with one end of the rod pivotally held at one end of said frame, and the other rod end detachably held at the opposite end of said frame, and a fabric screen having a casing through which said rod extends, said screen being of larger area than said frame so that the edges of said screen may be placed under said frame.

1,385,503. FOOD PRODUCT. SHERWOOD P. SNYDER, Dayton, Ohio. Filed Dec. 15, 1919. Serial No. 345,005. 5 Claims. (Cl. 99—1.)

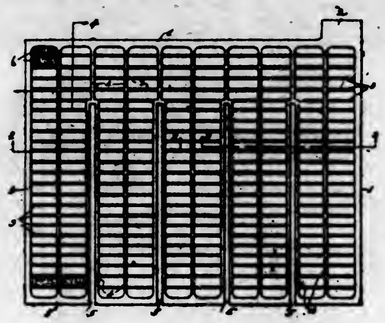
1. A food product of the character described comprising a mass of starchy materials cooked in an acidifying liquid, to which are added fatty and albuminous materials, a vegetable oil and condiments.

1,385,504. VISE. FREEMAN W. STROH, Barberton, Ohio. Filed Jan. 8, 1919. Serial No. 270,245. 2 Claims. (Cl. 81—20.)

1. A vise including a supporting bracket, a guide bracket pivotally connected to the supporting bracket, a jaw rotatably mounted on the guide bracket, and provided with a plurality of gripping members having relatively different shapes, a movable jaw supporting member operatively connected to said guide bracket and movable toward and away from said jaw, and a second jaw rotatably mounted on the jaw supporting member and provided with a plurality of gripping members of relatively different shapes, each jaw being rotatable independently

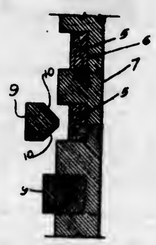
of the other jaw to bring either of the gripping members of the jaw into position to coöperate with either of the gripping members of the other jaw, a pendent ear upon the supporting bracket, a rod pivotally connected to said ear, and a clamp carried by said guide bracket and adjustably connected to said rod.

1,385,505. IMPRESSION-TRAY. SAMUEL GARFIELD SUPPLEE, East Orange, N. J. Filed May 2, 1921. Serial No. 466,090. 3 Claims. (Cl. 32—6.)



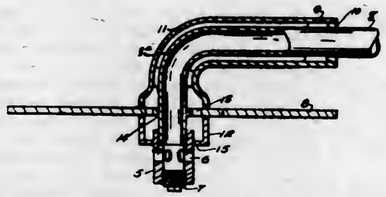
3. An impression tray formed of moldable material with a tongue having one end partially cut out, but normally lying in the plane of the body of the material and adapted to be bent therefrom, a space being provided between the bendable end of the tongue and the adjacent portion of the body of the tray to permit of the insertion of an instrument for bending said tongue.

1,385,506. WRENCH. SILAS L. TAYLOR, Wileyville, W. Va. Filed Mar. 14, 1921. Serial No. 451,956. 1 Claim. (Cl. 81—126.)



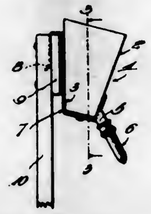
A wrench of the class described, comprising a stationary jaw, a shank formed thereon and provided with an elongated sleeve, the end of said shank opposite said jaw being curved outwardly to form a projection thereon, a movable jaw, a shank formed thereon slidably arranged in said sleeve, a handle member having its inner end portion designed Y-shaped to form a pair of projections, one projection of said handle member being pivoted to the projection on the first mentioned shank, and a link member pivoted at its one end to the inner end of the second mentioned shank and pivoted at its opposite end to the other projection on said handle member, whereby through oscillation of the handle member said movable jaw is disposed to its open and closed position.

1,385,507. BATTERY-PLATE. THOMAS W. THOMSON, Los Angeles, Calif. Filed Nov. 3, 1919. Serial No. 336,742. 1 Claim. (Cl. 204—29.)



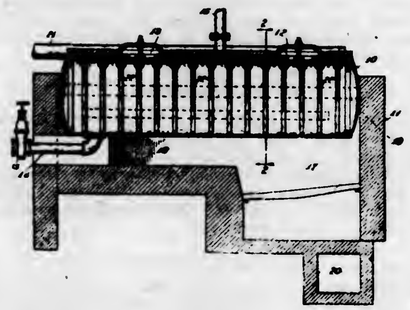
A grid for a battery plate comprising a border frame with cross supporting bars spaced apart and connected at their ends to the border frame, vertical bars extending from the top to the bottom of said frame, the alternate vertical bars being of slotted form for the greater part of their lengths, said slot extending through the lower border frame member, whereby to form spaced panels composed of cross bars with side and middle vertical bars, substantially as shown in the drawings and described in the specification.

1,385,508. PISTON-RING. LOU J. TREMBLEY, Denver, Colo., assignor, by direct and mesne assignments, of one-half to William Cohagen and one-half to William Wyscarver, Jr., Denver, Colo. Filed Sept. 20, 1920. Serial No. 411,612. 4 Claims. (Cl. 74—109.)



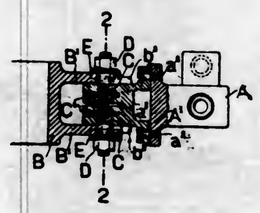
1. A piston packing composed of an outer expansion metallic ring and an inner layer of cork, the inner surface of the ring being constructed to readily penetrate the cork to form a seal.

1,385,509. GAS-BURNER. JESSE LYLE VANCE, Pomona, Calif. Filed Mar. 30, 1920. Serial No. 369,913. 6 Claims. (Cl. 158—99.)



3. A gas burner comprising a fuel mixture supply pipe having a downwardly extending discharge portion, a burner tip mounted on the lower end of said discharge portion, an auxiliary air distributer mounted upon the down-turned portion of the feed pipe and above the outlets of the burner tip, a deflecting plate mounted above the air distributer, and an air supply jacket surrounding the fuel mixture supply pipe and attached to the air distributer so that air to facilitate combustion will be drawn into and through said jacket by the combustion of fuel beneath the deflecting plate.

1,385,510. FEED-TROUGH. JAMES WALTER WARD, Mount Vernon, Ill. Filed Nov. 1, 1920. Serial No. 421,090. 1 Claim. (Cl. 119—71.)

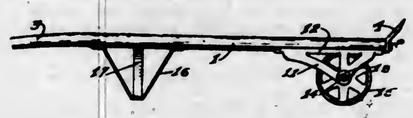


A device of the class described comprising an elongated substantially rectangular trough, open at its top and provided with inwardly and downwardly inclined front and rear sides of substantially the same height, said front side being provided adjacent its bottom with a plurality of spaced exteriorly disposed downwardly inclined outlet necks, nipples on the ends of the latter, a plurality of substantially V-shaped partitions in the trough dividing the latter into a plurality of separate compartments, one of said necks leading from each of the compartments, said partitions being of substantially the same height as the aforesaid sides of the trough, and supporting brackets for the trough provided at their lower ends with inclined hooks receiving the lower end of the trough for retaining the latter in an inclined position, portions of said brackets extending upwardly and bearing against the rear side of the trough and being formed at their free ends with hooks adapted to take over a supporting board or the like.

1,385,511. MANUFACTURE OF ASPHALT. HENRY R. WARDELL, New York, N. Y., assignor to Central Commercial Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 30, 1919. Serial No. 320,906. 5 Claims. (Cl. 196—25.)

1. The method of manufacturing asphalt which consists in compounding a mixed base petroleum residuum and an asphaltic base petroleum residuum, and then maintaining the said mixed residuums at a temperature above that required for complete expulsion of water vapor but below that of destructive distillation while simultaneously blasting the charge with air until an asphalt which is solid at ordinary temperatures is obtained.

1,385,512. FASTENING MEANS FOR OPTICAL INSTRUMENTS. WILHELM WITTIG, Augsburg, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 14, 1921. Serial No. 444,899. 2 Claims. (Cl. 287—23.)



1. An arrangement of the class described comprising a projection, said projection being slotted, a slotted sleeve for receiving said projection and means for forcing the parts of the projection which are separated by the slot radially against the sleeve.

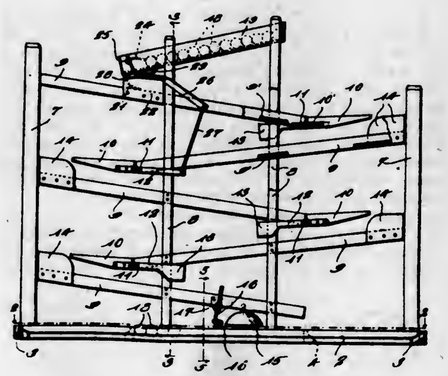
1,385,513. CONTROLLER FOR GAS-BURNERS. FREDERICK W. WOLF, Chicago, Ill. Filed Sept. 10, 1920. Serial No. 409,352. 6 Claims. (Cl. 126—52.)

1. The combination with a burner; of a fuel controlling valve therefor comprising a casing having a fuel passageway and a chamber intersecting the same, a ported valve in the chamber, said valve being rotatable to bring its port into and out of registry with the fuel passageway, and also slidable in the chamber to obtain a complete and a part registry of its port with the fuel passageway, an article-controlled means associated with the burner and having an operative connection with the valve for effecting the aforesaid sliding movement thereof, and means for controlling the extent of such sliding movement of the valve.

1,385,514. REINFORCED TRUCK. GUILFORD S. WOOD, Chicago, Ill. Filed June 13, 1918. Serial No. 239,710. 3 Claims. (Cl. 280—56.)

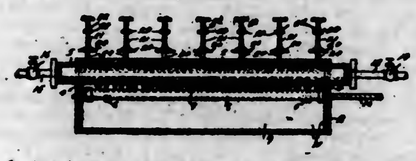
3. A truck frame including tubular sills, cylindrical cross-tubes joined at their ends to the respective sills and rigidly connecting said sills together, prismatic tubes within said sills and cross tubes to reinforce the same, each of the prismatic tubes within a cross tube being joined at its ends to the respective sills.

1,385,515. PROCESS FOR THE PRODUCTION OF ALCOHOL FROM GAS CONTAINING ETHYLENE. CLEBURNE A. BASORE, Auburn, Ala. Filed Mar. 14, 1921. Serial No. 452,285. 11 Claims. (Cl. 23—24.)



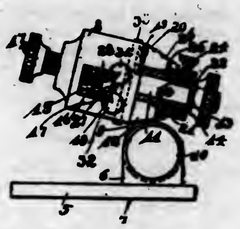
2. The hereindescribed process for the production of ethyl alcohol from a mixture of sulfuric acid and ethyl hydrogen sulfate, which consists in adding to said mixture water in amount equal to from 50 per cent. to 70 per cent. of the volume of the said mixture, subjecting the resultant reacting constituents to heat in a closed vessel, then distilling off the alcohol and water, and finally condensing the alcohol.

1,385,516. HAND-TOOL. WILLIAM A. BERNARD, New Haven, Conn., assignor to The William Schollhorn Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 26, 1919. Serial No. 292,967. 14 Claims. (Cl. 140—121.)



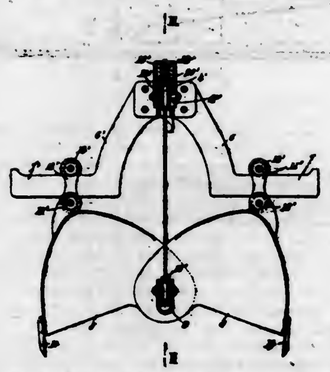
1. A wire twisting tool having transversely extending flat recessed surfaces to engage the angularly disposed projecting ends of a wire so that they may be twisted together, and means extending entirely across in front of the engaging surfaces to retain the projecting ends of said wire against slippage from said tool, during the twisting operation.

1,385,517. TOY. CLARENCE W. BLACKBURN, South Greensburg, Pa. Filed Dec. 16, 1920. Serial No. 431,237. 5 Claims. (Cl. 46—61.)



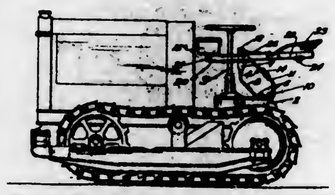
1. A toy comprising a series of oppositely disposed inclined tracks positioned one above the other and each having a pivotally mounted lower end portion movable into and out of engagement with the upper end of a succeeding track bar, arms extending from the pivoted end portions of the tracks, certain of said arms being weighted and the arm of one pivoted end portion unweighted, a receptacle above the upper track having an outlet above the upper track, rollers in said receptacle above the upper track, rollers in said receptacle freely movable for passing successively through the outlet onto the upper track, and a guard for the outlet operatively connected with the unweighted arm and moved by a roller passing over its coöperating pivoted track end to permit a single roller to pass out of the receptacle and retain other rollers in the receptacle.

1,385,518. VULCANIZER. MICHAEL BOYLAN, Omaha, Nebr. Filed Nov. 12, 1919. Serial No. 337,387. 3 Claims. (Cl. 18—18.)



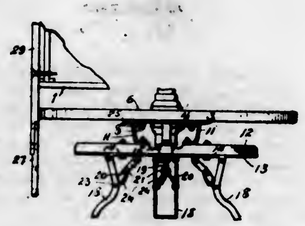
1. A vulcanizer comprising a vulcanizing plate, clamps carried by said vulcanizing plate for clamping an article to be vulcanized on said plate, means for vertically and horizontally adjusting said clamps, a casing for supporting said vulcanizing plate, a steam generating cylinder disposed within the casing, and adjacent the under face of the vulcanizing plate, a burner within the casing and disposed below the steam generating cylinder and a pipe connected to one end of the steam generating cylinder, said pipe having connected to its other end a vulcanizing block.

1,385,519. CUTTING-TOOL HOLDER. LESLIE F. CALHOUN, Los Angeles, Calif. Filed Oct. 5, 1920. Serial No. 414,920. 7 Claims. (Cl. 51—220.)



1. In a cutting tool holder, a base member having a planed-off underside to be placed on the base of a grinding wheel forming the guiding and supporting means of the device, a swinging member engaging with the base member in a practically vertical plane, a body member having means for engaging with the swinging member in a rotary manner practically crosswise to the swinging motion of the swinging member and having an aperture transversely to its turning engaging means, and engaging means disposed in the body member for holding cutting tools within the aperture of the body member.

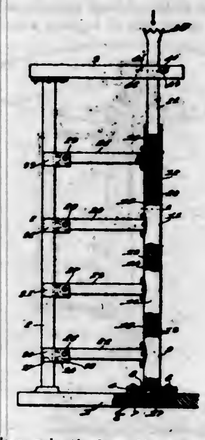
1,385,520. AUTOMATIC EXCAVATING-BUCKET. JOSEPH CORNELOUP, Paris, France. Filed May 17, 1920. Serial No. 382,193. 4 Claims. (Cl. 37—30.)



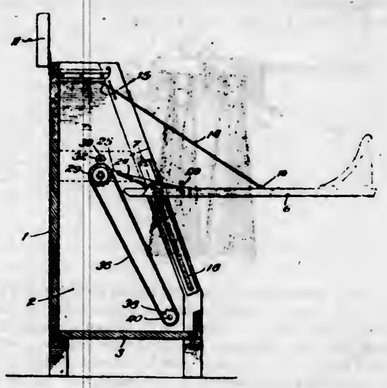
1. In an automatic crane bucket, a main frame with approximately horizontal guideways for the lateral suspension of the bucket shells, bucket shells having a central articulation shaft and means for suspension situated at each side of the said guideways, and means whereby the articulation shaft can be raised against the action of gravity with reference to the said guideways for the purpose of closing the bucket shells.

1,385,521. TRACTOR-SEAT. SAMUEL J. COUGHRAN, Buena Park, Calif. Filed Nov. 11, 1920. Serial No. 423,399. 4 Claims. (Cl. 155—51.)

1. A spring seat comprising a support including members alongside one another and each comprising a base portion, an upright arm at one end thereof, and a forwardly projecting arm at the other end, a bracket carrying the seat pivoted to said forwardly projecting arms, and a yieldable spring connection between said bracket and the upright arms.



1,385,522. WIRE-REEL. ESTEL L. CROSWHITE, Kansas City, Mo. Filed Jan. 23, 1920. Serial No. 353,552. 5 Claims. (Cl. 242—95.)

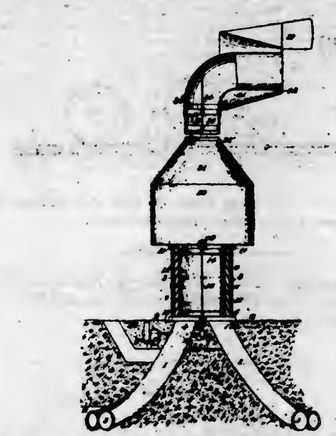


1. In a wire reel, the combination with a base member having means for attachment to a suitable support, of a member rotatable thereon, a plurality of wire bundle holding devices carried by the rotary member, and a member pivoted to the base member and having two oppositely facing hooks, either of which is adapted for being releasably locked to the rotary member.

1,385,523. MINER'S DRILL-HOLDER. CHRISTOPHER DEVENISH, Bossburg, Wash. Filed Apr. 24, 1920. Serial No. 376,342. 4 Claims. (Cl. 76—5.)

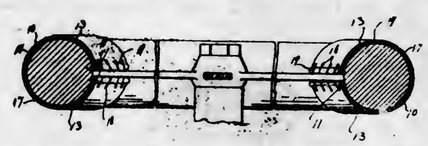
1. In a device for supporting miner's drills of the same diameter and of different lengths for sharpening purposes, a frame including a base, a holder on said frame for the shank of the drill near the drilling end to be sharpened, and a plurality of supporters for supporting the remaining ends of drills of different length and transmitting the hammer sharpening thrust to the base, said supporters being selectively adjustable out of or into operative position for supporting drills of different lengths.

1,385,524. VERTICAL FILE. CARL F. DIECKMANN, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 26, 1920. Serial No. 376,543. 11 Claims. (Cl. 45—2.)



1. A filling cabinet having a movable front, supporting means pivotally attached to said front between its upper and lower ends, and a power device attached directly to the lower end of the front and adapted to vary its elevation to thus control the angle of inclination of said front.

1,385,525. PROCESS OF EXTRACTING PECTIN. THEODORE WILLIAM DOELL and LOUIS A. F. MAES, Corona, Calif. Filed Dec. 22, 1919. Serial No. 346,740. 1 Claim. (Cl. 99—11.)

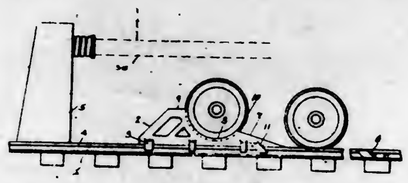


The process of obtaining pectin consisting in boiling pectin bearing substances in water containing a small amount of acid, adding a bleaching agent, filtering the mass to obtain an extract, precipitating the pectin by the addition to the clear decoction of a salt of the alkali or earth alkali group, removing and washing the precipitate, and then drying and powdering the resultant mass.

1,385,526. POWER-GENERATING APPARATUS. DEIANA DOMENICO, San Francisco, Calif. Filed Dec. 27, 1920. Serial No. 433,178. 2 Claims. (Cl. 253—38.)

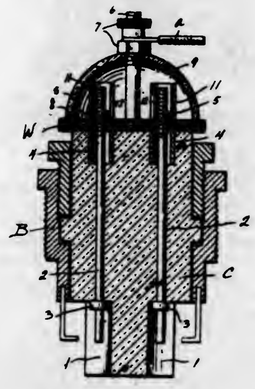
1. An atmospheric power generator including a plurality of open tubes disposed with their discharge ends radiating from a common point and embedded in the earth with their receiving ends communicating with the atmosphere at a point below their discharge ends, a cylindrical vertically disposed chamber into which the discharge ends of said tubes discharge, a power cylinder rotatably mounted on a vertical axis within said chamber and of a diameter less than that of said chamber, providing a restricted air passage between the periphery of said cylinder and said chamber wall, a series of vanes carried by and projecting outwardly from the periphery of the cylinder, said vanes being disposed spirally longitudinally of the cylinder with their edges in extreme close proximity to the inner surface of said chamber wall, an expansion chamber communicating directly with the upper end of said restricted air passage and of a cross sectional area considerably greater than that of said air passage, a stack extended vertically from said expansion chamber, an elbow rotatably supported on the upper end of said stack, a direction vane carried by said elbow, and a cone around said elbow and converging toward its discharge end and spaced therefrom.

1,385,527. HAND WARM OR GRIP FOR STEERING-WHEELS. SOLON DUER, St. Paris, Ohio. Filed Feb. 11, 1920. Serial No. 357,972. 2 Claims. (Cl. 219—46.)



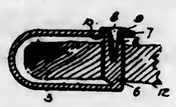
1. A heating device for steering wheel rims, comprising a web of flexible rubberized fabric having its margins folded over upon the body of the fabric, reinforcing wires extending longitudinally between said folded over margins and the body of the fabric and disposed adjacent the fold, and a heating element disposed between the body and said margins of the fabric and adapted to be connected at its extremities to a source of current.

1,385,528. CAR-STOP SHOE. JAMES U. DUFFY, Cleveland, Ohio, assignor to The Friction Car Stop Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 5, 1919. Serial No. 342,813. 6 Claims. (Cl. 104—260.)



1. A shoe for car stops, comprising a member adapted to be slidably mounted on a rail with stops, said member

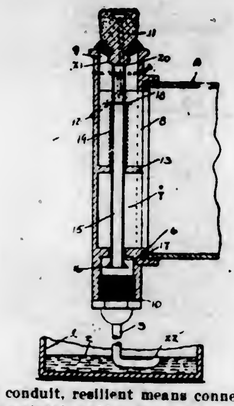
comprising a curved, wheel receiving portion and an inclined forward portion, the forward portion forming a



hump adapted to hold said wheel in said shoe during return movement of said wheel toward the stop.

1,385,529. SPARK-PLUG. WILLIAM M. ELLIS, Kenton, Ohio. Filed Jan. 10, 1920. Serial No. 350,657. 5 Claims. (Cl. 123—169.)

1. A spark plug including a core, a conductor wire disposed through the core, a post carried by the core and adapted to be connected with a source of electrical energy, said post being to one side of an end portion of the conductor wire, and means for insulating, at will, the conductor wire from the post.



1,385,530. MARKING-TAG. PETER FRANK ELZI, Denver, Colo. Filed Mar. 1, 1920. Serial No. 362,440. 1 Claim. (Cl. 40—3.)

The method of forming animal ear-tags from metallic rods, which consists in stamping a portion of the length of the rod in a stamping-press to flatten the same, cutting a hole in one end of said flattened portion, bending up said flattened portion into U-shape between shaping-dies, and drilling a socket in the free end of the unflattened portion.

1,385,531. LUBRICATING APPARATUS. WILLIAM FAHEY, Cleveland, Ohio. Filed Aug. 9, 1919. Serial No. 316,428. 5 Claims. (Cl. 184—103.)

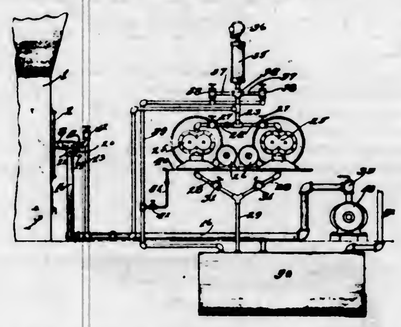
5. A lubricant reservoir comprising a cylindrical vessel having one open end and a metal cover sealed to said vessel to close such open end, such cover being provided with a conduit therein open laterally to said vessel and having alined openings at either end thereof, a valve in said conduit adjacent the bottom thereof, a rod connected to said valve and extending to a point adjacent the other

end of said conduit, resilient means connected to said rod to normally maintain said valve in its closed position, and a removable valve at the other end of said conduit and adapted in its closing position to engage said rod to open said first named valve whereby only one valve may be open at one time.

1,385,532. BRUSH. WILLIAM FEDER, Chicago, Ill., assignor to Theo. B. Robertson Products Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1919. Serial No. 317,864. 1 Claim. (Cl. 15—13.)

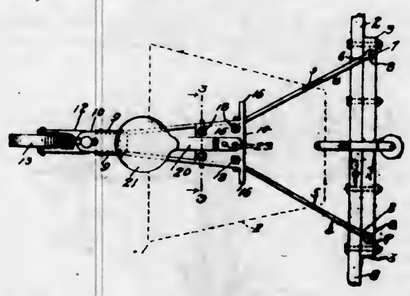
A brush, comprising a head, having a holder and a back piece, said holder having slots therein extending therethrough from front to back and extending lengthwise thereof less than the whole length of said backpiece, whereby each end of each slot is closed by an end portion of the back piece, bristles completely and uniformly filling each slot from end to end thereof, a wedge-shaped strip in each slot, the edge of the wedge being toward the front of the brush, the back of the wedge and the back ends of the bristles being flush with the rear face of the holder, the back piece contacting with said rear face of the holder, the rear ends of the bristles and the backs of the wedges, waterproof cement securing the bristles, wedges and back piece together, and supplemental fastening means securing the wedges in the slots and the back piece to the holder.

1,385,533. GARMENT-BELT STRUCTURE. SAMUEL FEINSTONE, Brooklyn, N. Y., assignor of one-half to Freydberg Brothers Inc., New York, N. Y., a Corporation of New York. Filed Mar. 3, 1921. Serial No. 449,361. 3 Claims. (Cl. 2—142.)



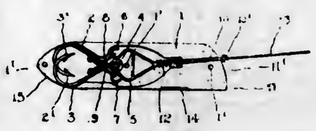
1. A garment belt adapted for attachment to a garment waist band, comprising a strip of belt fabric having back-folded ends forming end-folds, and fasteners, each having a body of substantial width and rigidity with one

end located near one edge of the fabric strip and the other end located a substantial distance inward from the other edge of the strip, one fastener having eyes, one near each end of the outer edge of the body, projecting through



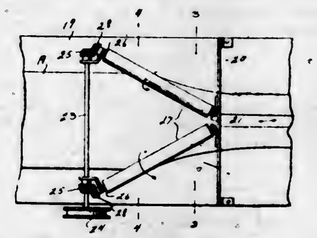
holes in one of said belt-strip end folds, and the other fastener having hooks to coöperate with the eyes, one near each end of the outer edge of the body of said fastener, projecting through holes in the other of said belt end folds.

1,385,534. OIL-BURNER SYSTEM FOR FURNACES. ALFRED FISHER, Chicago, Ill. Filed Feb. 20, 1920. Serial No. 360,218. 4 Claims. (Cl. 158—4.)



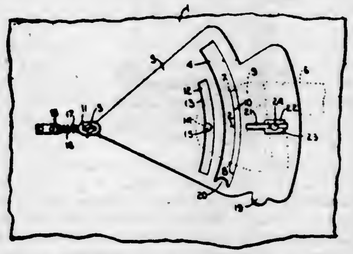
1. In a furnace the combination with the furnace fire box, of blast burners mounted to direct flames into said firebox, and a plurality of rows of curved upright baffle plates mounted on the firebox floor, each of said baffle plates having one of the corners thereof cut away to afford a curved deflecting edge.

1,385,535. HARROW-CART. DANIEL B. FRISBY, Dumont, Iowa. Filed Jan. 20, 1920. Serial No. 352,699. 2 Claims. (Cl. 55—91.)



1. In a device of the class described, the combination of a pair of diverging arms, a tapering plate resting upon said arms, said plate comprising a flat body having at its front ends oppositely-extending foot rests, said body provided near its side edges with pairs of apertures, the pairs of apertures being formed in a converging position with respect to each other, clamping bolts extending through said apertures and partly surrounding the arms, nuts on said bolts and engaging said plate for clamping the plate upon the arms, said plate provided near the center of its body with a pair of apertures, a seat standard resting at its front end flat upon said plate, bolts extending through said seat standard at its front end and through the pair of centrally-arranged apertures, a seat carried by said standard, a wheel, and means for supporting said arms upon said wheel.

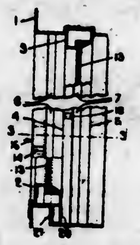
1,385,536. ARTIFICIAL FISH-BAIT. STUART B. GLEASON, Passaic, N. J. Filed Jan. 12, 1920. Serial No. 350,738. 1 Claim. (Cl. 43—36.)



In a device of the character described, a body, a hook normally concealed and pivotally hung therein, a yoke, a connecting link between the yoke and a point intermediate the ends of the hook and a lead attached to the yoke whereby the hooks may be projected beyond the surface of the body, substantially as shown and described.

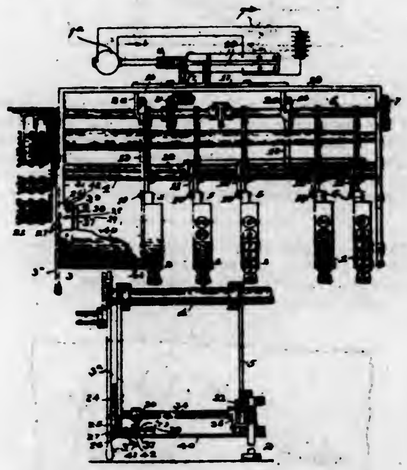
1,385,537. MEANS FOR UNCURLING FILMS OR STRIPS. GEORGE GOUDIS, Detroit, Mich. Filed Jan. 15, 1921. Serial No. 437,558. 7 Claims. (Cl. 91—10.)

1. The combination with means for applying a coating to a film and a drier for the film through which the film is carried, of means for flattening the film transversely comprising flattening members disposed in the path of travel of the film and converging toward each other in the direction from which the film is moving.



1,385,538. WORK SUPPORTING AND GUIDING DEVICE. CHARLES A. GREEN, St. Louis, Mo., assignor of one-half to John E. Swanson, Boston, Mass. Filed Nov. 15, 1919. Serial No. 338,357. 5 Claims. (Cl. 112—2.)

1. A work supporting and guiding device for sewing machines comprising a manually movable pivotally mount-

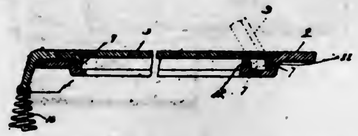


ed work supporting member having an arcuate slot therein to provide a path for the needle, and an arcuate guide located beneath said slot for indicating the position for the work upon said work supporting member to cause the needle to produce a predetermined line of stitching in the work as the work supporting member is moved about said pivot.

1,385,539. WINDOW. JOSEPH GREENBURG, Boston, Mass. Filed Jan. 20, 1920. Serial No. 352,869. 4 Claims. (Cl. 20—43.)

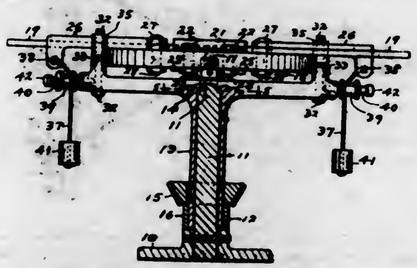
2. In a window, the combination with a window frame having a guiding groove in each side, of a sash having trunnions operating in said grooves and also having projections normally received in the grooves which coöperate with the trunnions in holding the sash in operative position, said window frame having slots through one wall of each groove to permit the projections to be removed from the grooves and the window sash to be swung into horizontal position, and slides for closing said slots.

1,385,540. CASH-REGISTER. HENRY S. HALLWOOD, Columbus, Ohio, assignor to The City National Bank, Columbus, Ohio. Filed Apr. 11, 1914. Serial No. 831,108. 36 Claims. (Cl. 235—11.)



1. A registering and accounting machine of the type embodying an intermittently actuated operating mechanism including a master element common to a plurality of manipulative value determining elements and identity determining elements arranged in separate series and each having a part in governing the performance of said operating mechanism, characterized by a locking detent normally engaged in locking position to prevent the operation of said master element and means controlling the detent to disengage it from said master element by the manipulation of an amount determining element independent of the operation of an identity determining element.

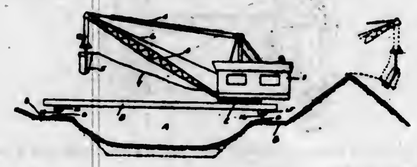
6. In a machine of the character described, the combination with an operating mechanism, electrically operated actuating means therefor, an electric circuit controlling same and manipulative amount determining and identity determining elements controlling the performance of the operating mechanism, of separate independently operated contact members in said electric control circuit and means controlled by the operation of an amount determining element for operating one of said contact members independent of the operation of an identity determining element, and means controlled by the operation of an identity determining element for operating the other contact independent of the operation of an amount determining element.



29. A registering and accounting machine embodying an operating mechanism the performance of which is controlled by a plurality of setting elements for values and setting elements for identification, characterized by a plurality of independently operated operation prevention devices normally in simultaneous engagement with the operating mechanism and disengaged solely by the operation of a value setting element and an identification setting element respectively, and preventing a registration of said operating mechanism unless one of each of said setting elements has been operated.

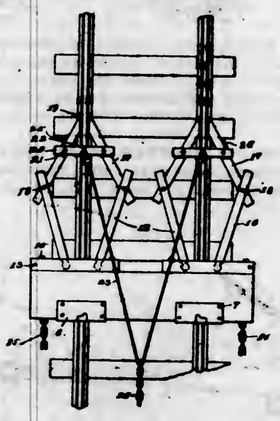
1,385,541. STOVE. GEORGE HAMMER, Oakland, Calif. Filed Dec. 16, 1920. Serial No. 431,064. 4 Claims. (Cl. 126—211.)

1. A closure comprising the combination of a flat member having a rectangular opening therein, a ledge formed around said opening, a plate forming a closure for said opening, and adapted to rest on said ledge, said ledge having a laterally extending opening in the side wall thereof, a stud on said plate adapted to enter said opening, and a shoulder on said plate adapted to engage said member when said plate is removed laterally.



1,385,542. MACHINE FOR BENDING RODS, BARS, OR THE LIKE. HAROLD J. HARDY, Cleveland, Ohio. Filed Dec. 29, 1919. Serial No. 348,138. 6 Claims. (Cl. 153—46.)

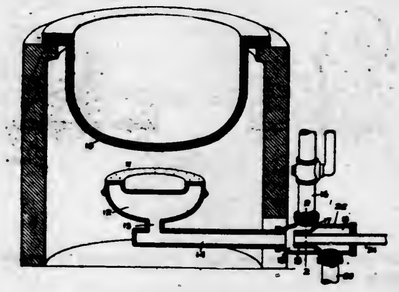
1. In a machine for bending a metal rod, bar or the like, a substantially horizontal bed, two spaced levers arranged over and fulcrumed to the bed and movable in a horizontal plane and arranged to engage opposite sides



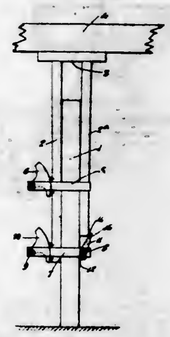
respectively of one and the same bar or rod to be bent laterally, means for affording lateral support between said levers to said rod or bar, two lever-actuating members movable circumferentially of the bed and arranged diametrically opposite, and means for moving said lever-actuating members simultaneously in the same direction circumferentially of the bed, one of the levers extending into the path of one of said lever-actuating members, and the other of said levers extending into the path of the other of said lever-actuating members.

1,385,543. DERRICK OR EXCAVATING-MACHINE. JACOB A. HARMAN, Peoria, Ill. Filed Sept. 12, 1919. Serial No. 323,330. 4 Claims. (Cl. 37—55.)

1. In a derrick or excavator, in combination, a pair of wheel supports, one longer than the other to provide a three point suspension frame, a span for a ditch, comprising a beam connected to the short wheel support and one end of said longer wheel support, bracing and supporting means for said beam, and a revolving derrick mounted on said span, off center or eccentric to the width thereof, and at a short distance from the center line of one of said supports.



1,385,544. BRAKE. WILLIAM T. HARRIS, Harrodsburg, Ky. Filed May 21, 1920. Serial No. 383,092. 5 Claims. (Cl. 188—44.)

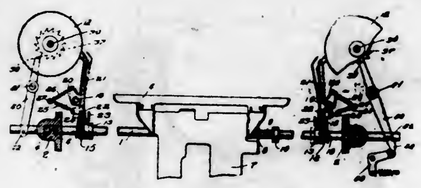


1. In combination with the rails of a railway track, a chock including a body portion, pivoted clamping arms carried by the body portion, means for raising the arms out of engagement with the rails, and said clamping arms adapted to clamp the rails upon movement of the body portion in one direction.

1,385,545. GAS-BURNING APPLIANCE. JOHN S. HEALY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,623. 3 Claims. (Cl. 158—118.)

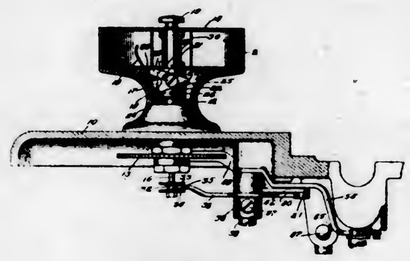
1. In a gas burning appliance, the combination with a burner having a passage leading thereto and directly communicating therewith, of a mixing chamber connected directly with and leading directly into said passage, a nozzle located concentrically at the intake end of said passage and in alinement therewith, means for directing air under pressure into the passage, said nozzle having centrally extending thereinto and terminating at its end a passage for atmospheric air, and means for introducing gas into said chamber at the rear of the end of said nozzle.

1,385,546. ADJUSTABLE STRUT. JESSE E. HODGES, Covington, Ky. Filed Dec. 8, 1916. Serial No. 135,776. 1 Claim. (Cl. 248—3.)



In an adjustable strut, the combination with a central standard and side supports lying along the sides thereof, one of the side supports being shorter than the other, a frame surrounding the standard, a cam clamp pivotally mounted at one end of the frame, and a clamp lock pivotally mounted at the other end of the frame, with said frame located horizontally on the standards, with the cam clamp in a position to engage the longer side support and force it against the central standard, and the clamp lock to engage the under side of the short side support and the side of the central standard with a U-shaped clamp provided with a cam to engage and press the side supports together, located above the lower ends of the side supports, to hold the side supports temporarily prior to adjustment of the lower support, for the purpose described.

1,385,547. AUTOMATIC RIBBON-REVERSE. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Jan. 20, 1919. Serial No. 272,002. 13 Claims. (Cl. 197—160.)

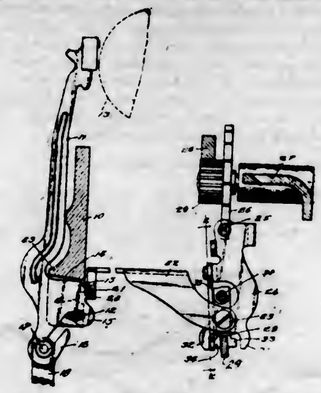


1. The combination with ribbon spools and feeding means therefor, of a reverser comprising a longitudinally

movable shaft which is oscillated about its axis during the ribbon feeding movement, and means controlled by

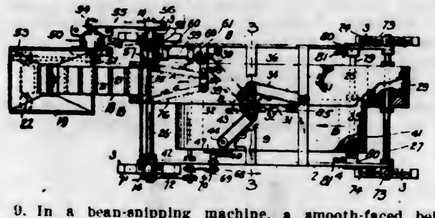
the ribbon to move the shaft longitudinally to reverse the ribbon feed.

1,385,548. AUTOMATIC RIBBON-REVERSE. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Mar. 10, 1919. Serial No. 281,739. 14 Claims. (Cl. 197—162.)



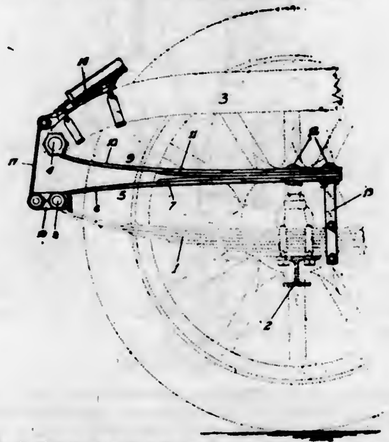
1. The combination with a ribbon spool, of mechanism for rotating said spool, means for reversing said rotating mechanism to cause reversal of the direction of movement of a ribbon wound upon said spool, means for actuating said reversing means, said actuating means being arranged to move at each printing operation, and means controlled by the ribbon on said spool for moving said reversing means into operative relation with said actuating means to cause a reversal of the movement of said ribbon.

2. The combination with a ribbon spool, of a drive shaft therefor arranged to oscillate about its axis, means for shifting said shaft longitudinally of its axis for reversing the rotation of said spool, means actuated by the oscillation of said shaft for actuating the shifting means for said shaft, and a device controlled by the ribbon on said spool for effecting an operative connection between said shaft-shifting means and the actuating means therefor.



1,385,549. TYPEWRITER MECHANISM. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Mar. 15, 1920. Serial No. 365,966. 3 Claims. (Cl. 197—97.)

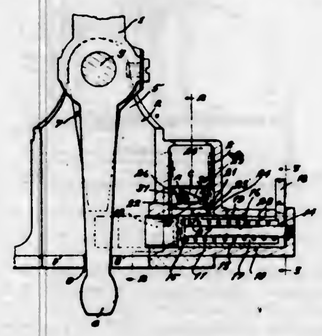
1. In a typewriter having escapement mechanism, a dog actuating device for controlling said mechanism, an oscillatory member for operating said dog actuating device, said oscillatory member having fingers for engaging said actuating device; and a stop movable into and out



of position between one of said fingers and said dog actuating device.

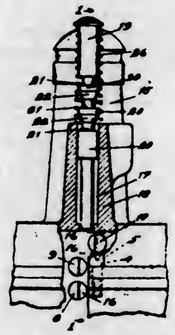
1,385,550. BEAN-SNIPPING MACHINE. CHARLES J. HOOKER and BEN ROBERTS, Fort Lupton, Colo. Filed Feb. 8, 1919. Serial No. 275,817. 10 Claims. (Cl. 146—11.)

9. In a bean-snipping machine, a smooth-faced belt conveyer, a cutting element beyond an edge thereof, and an obstructive member above the conveyer, extending slantingly toward said cutting element whereby to feed beans carried on the conveyer onto the same.



1,385,551. SHOCK-ABSORBER FOR MOTOR-VEHICLES. ALBERT HOWES, Santa Cruz, Calif. Filed Aug. 4, 1920. Serial No. 401,092. 2 Claims. (Cl. 267—8.)

2. A shock absorber for motor vehicles comprising in combination with the frame and main spring of an axle

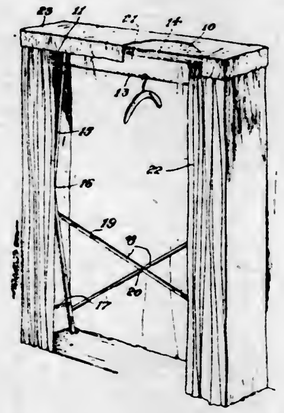


of the vehicle, said spring being disconnected from the frame at the outer end thereof and spaced therefrom, a leaf spring secured to the frame end and extending beyond the axle substantially parallel to the main spring, a second leaf spring connected to the outer end of the main spring and positioned in reverse relation to the first named spring, said springs converging together to lie one on the other at their inner ends, and a support fixed to the main spring and on which such inner spring-ends bear and are secured.

1,385,552. MECHANISM FOR LOCKING LEVERS FULCRUMED FOR UNIVERSAL SWINGING MOVEMENT. GEORGE C. JENSEN, Oakland, Calif. Filed Dec. 7, 1917. Serial No. 206,083. 1 Claim. (Cl. 70—128.)

In combination with a support, a lever, and means with which said lever coöperates for preventing movement of the lever comprising a plunger in said support adapted to engage said lever and at least partially surround the same, means for normally retaining said plunger in disengaged position away from the lever, a lock adapted to engage a part carried by the plunger to retain the same in engaged position with the lever, and an operating member for the plunger having a projecting part accessible to the operator and interengaged with the plunger and the support to maintain the plunger and its locking part in alined position relative to the lock and the lever.

1,385,553. TRANSMISSION-COVER LOCK. GEORGE C. JENSEN, Oakland, Calif. Original application filed Aug. 8, 1918, Serial No. 248,868. Divided and this application filed June 25, 1919. Serial No. 306,699. 4 Claims. (Cl. 70—126.)

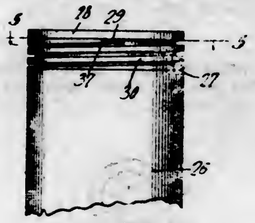


1. In combination with a vehicle transmission having a case member and a removable cover member therefor, a bolt for detachably securing the members together, a shifter device movable within one of said members and capable of movement to prevent the release of said bolt, and means for locking said shifter device from movement when the same is in a position to prevent the release of said cover securing bolt.

1,385,554. REPAIR-LINK. HUGH E. JONES, Oshkosh, Wis. Filed Aug. 19, 1920. Serial No. 404,635. 6 Claims. (Cl. 59—88.)

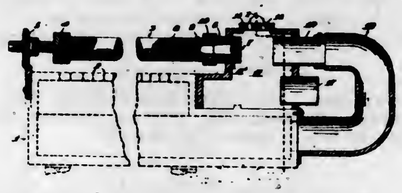
1. A repair link comprising two complementary links adapted to be superimposed upon each other, the said links being cut away at opposite sides to provide entrance openings for the links of the chains to be connected, one end of one link and the opposite end of the other link being provided with inwardly extending overlapping projections, means for pivotally securing said overlapping projections together, and means on each link for projecting into the entrance opening of the other link to lock said links against relative longitudinal and angular movement.

1,385,555. COLLAPSIBLE WARDROBE. MARY R. KEEGAN, Woodsfield, Ohio. Filed Aug. 16, 1920. Serial No. 403,901. 5 Claims. (Cl. 45—118.)



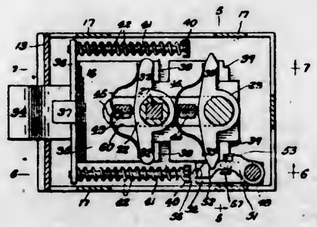
1. A foldable wardrobe structure including a top board, members depending therefrom and hinged thereto, a longitudinally extending rod supported by said members but detachable therefrom, two pairs of normally crossed legs detachably engaged with the ends of the top board on its under side, the legs of each pair being pivoted to each other intermediate their ends, foldable braces connecting one pair of legs to the other pair of legs, and foldable braces connecting the legs of each pair and holding them spread apart.

1,385,556. PISTON AND RING. PERCY LE ROY KERSEY, Indianapolis, Ind. Filed Jan. 20, 1920. Serial No. 352,841. 1 Claim. (Cl. 74—109.)



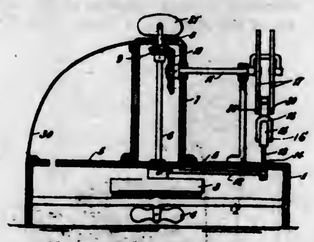
A piston having a circumscribing groove defining an end flange and a shoulder, there being an opening extended

through the flange; and a spiral ring surrounding the piston between the flange and the shoulder, the opening constituting means whereby the ring may be threaded into the groove, the flange being beveled in opposite directions,



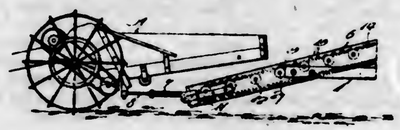
on opposite sides of the opening, to deflect one end of the ring into the groove when the ring is rotated in one direction, and to deflect the other end of the ring into the groove when the ring is rotated in an opposite direction.

1,385,557. GENERATOR FOR HYDROCARBON-BURNERS. JOHN O. KING, Los Angeles, Calif. Filed Sept. 8, 1919. Serial No. 322,404. 2 Claims. (Cl. 158—65.)



2. The combination with a gas burner of a mixing chamber having an outlet in communication with the interior of the burner and a gas inlet nozzle opposite and in alinement with the outlet, an air inlet at the bottom of said chamber, a removable cap having air passages above the gas nozzle and outlet and an air inlet in the vertical wall of the chamber below the outlet, said air inlets being so located as to form a circulation toward the outlet from all parts of the chamber.

1,385,558. LOCK DEVICE. JOHN A. KELLER, Brooklyn, N. Y. Filed July 3, 1920. Serial No. 393,855. 5 Claims. (Cl. 292—169.)



1. A lock device of the class described comprising a casing composed of two sheet metal plates, one of said plates being fashioned into box-shaped form and provided with parts adapted to pass through the other plate and riveted thereto to secure the separate plates together, a tensionally operated latch bolt device mounted between the separate plates of the casing and comprising a bolt proper adapted to normally project through one end wall thereof, a sheet metal guide plate in said casing, two pair of projecting members fashioned from said guide plate, a plurality of roll backs rotatably mounted in the casing and in operative connection with the projecting members of said guide plate, tensional means for holding said roll backs in their normal position, and means coöperating with said latch bolt device and one of said roll backs for locking the latch bolt device against inward movement by the other of said roll backs.

1,385,559. REVOLVING TOY. GEORGE C. LASARES, Springfield, Mass., assignor of one-half to Leon J. Harley, Jr., Springfield, Mass. Filed Jan. 13, 1920. Serial No. 351,167. 8 Claims. (Cl. 46—27.)

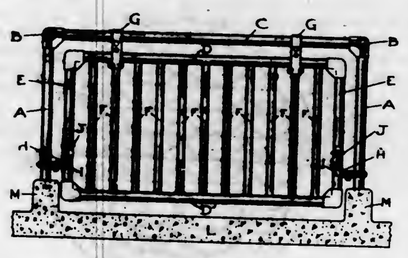
1. In a rotary toy device, the combination, of a base-member, a motor located therein, an arm connected to said motor and driven by the same, a figured toy, comprising a horse and a rider, means for causing the horse and rider to move together, and means for automatically lifting the rider from the horse and returning the same to the horse and simultaneously with the movement of the horse.

1,385,560. WAGON-LOADING DEVICE. EMIL C. LEHSOU, Missoula, Mont. Filed Apr. 23, 1920. Serial No. 376,133. 1 Claim. (Cl. 193—8.)

In a traction-operated conveyer, a pair of substantially horizontal beams, a pair of traction wheels supporting said beams and located at the rear ends of these beams, a pair of uprights on and extending up from the rear ends of said beams, a conveyer-frame including a pair of rearwardly and upwardly inclined frame-bars having their front end portions secured to those of said horizontal beams, their rear ends extending rearward beyond said wheels and horizontal beams, and their intermediate parts being secured to and supported by said uprights, a shaft journaled on the rear ends of said horizontal beams, transmission gearing operatively connecting said shaft to said traction wheels, a sprocket carried by said shaft, an endless conveyer-belt between and carried by said frame bars, a shaft journaled in the rear end portion of these frame-bars, a sprocket on this latter shaft, a driving chain on the sprockets, and idlers on said frame bars at points substantially in vertical alinement with the first said sprocket, these idlers serving as guides to hold the chain out of the way of a wagon while the wagon extends under the rear end of the conveyer and while the conveyer discharges its load from said rear end into the wagon.

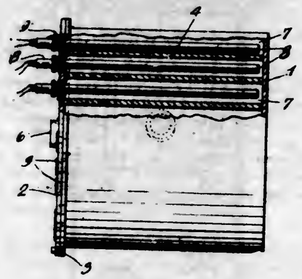
1,385,561. METAL PROPELLER FOR AIRCRAFT. HENRY LEITNER, Kingsway, London, England. Filed Apr. 30, 1921. Serial No. 465,740. 4 Claims. (Cl. 170—159.)

1. A metal propeller of the kind hereinbefore referred to wherein either of the metal plates constituting the face and back of the blades, or both plates, is or are formed with a slit to enable the welding or other heating opera-



tion for connecting the edges of such plates together to be effected without harmful distortion of the said plates, substantially as described.

1,385,562. MANUFACTURE OF OPEN-HEARTH METAL. LEWIS B. LINDEMUTH, New York, N. Y. Filed July 23, 1920. Serial No. 398,467. 4 Claims. (Cl. 75—27.)



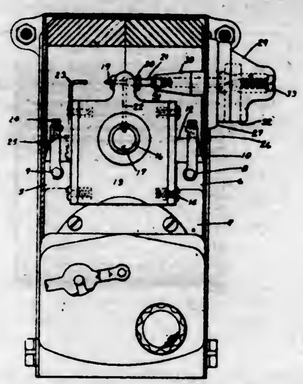
1. The method of manufacturing open hearth steel which comprises producing a synthetic pig metal from scrap in a melting furnace, removing sulfur therefrom and charging said pig metal into an open hearth furnace, treating said metal under open hearth conditions and finishing the metal according to requirements.

1,385,563. FASTENER FOR CLOSURES. WILLIAM LOUDEN, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed June 18, 1920. Serial No. 389,871. 5 Claims. (Cl. 292—213.)

1. In fasteners for closures a pair of members spaced in parallel relation a distance apart, the ends of each member being disposed at substantially right angles to each other, in combination with a closure having a side rail straddled by the members and upon which they are pivoted at a point centrally between their outstanding ends, and a fixed rail adjacent thereto and parallel with the side rail, whereby, as the fastener is turned on its pivot, one set of its outstanding ends will be adapted to straddle said adjacent fixed rail, while the other set will be held astraddle of the side rail of the closure to which it is pivoted, and the closure will be held in fixed position until the members of the fastener are turned on their pivot to release their ends from the fixed rail.

1,385,564. HEATER FOR FLUIDS. DANIEL M. LUBBERS, Cleveland, Ohio. Filed Oct. 7, 1920. Serial No. 415,262. 8 Claims. (Cl. 219—39.)

1. A heater for fluids comprising a drum having openings at its periphery and center and having a spiral channel connecting said openings, and heating units spaced apart in said channel.



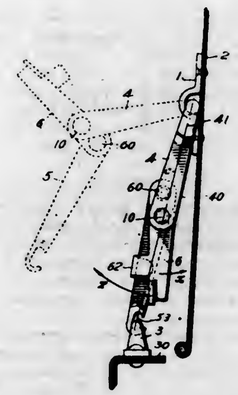
1,385,565. DEVICE FOR CHECKING THE ROCKING AND REBOUNDING OF VEHICLES. ELMER E. LYON, Harrisonville, Mo. Filed Dec. 6, 1919. Serial No. 343,086. 2 Claims. (Cl. 267—60.)

1. The combination with a vehicle body, axle and transverse supporting spring, of a bar secured rigidly to said body and projecting laterally therefrom, a coil tension spring carried by the onter end of said bar, a strap looped around said axle and connected tautly with the lower end of said coil spring, and a spreader device associated with said strap and coil spring for maintaining said strap out of engagement with said transverse spring.

1,385,566. CONNECTING MEANS FOR INDUCTION-COILS USED IN RADIO AND IGNITION SYSTEMS. SAMUEL C. MCKEOWN, East Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 19, 1917. Serial No. 197,443. 6 Claims. (Cl. 171—209.)

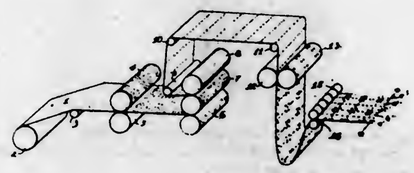
1. In combination, an ignition dynamo having relatively fixed core pole pieces with means for directing flux therethrough, an induction coil having primary and secondary windings, a core for said windings bridging said pole pieces, quick detachable means for clamping the core to the core pole pieces, a terminal block attached to the side of said coil, a contact carried by said block and having said secondary winding connected thereto, an ignition terminal connected to said contact, an arm attached to said block, a double ended contact carried by said arm and electrically

connected with the first mentioned contact, a spark gap contact associated with one of said double end contacts



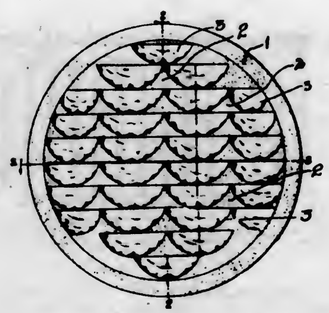
and a radio terminal in electrical engagement with the other end of said double contact.

1,385,567. IMITATION-COPPER-ENGRAVING PROCESS. ARTHUR CORQUATTO JOSEPH MARCHISIO, Paris, France. Filed Sept. 22, 1919. Serial No. 325,423. 1 Claim. (Cl. 41—46.)



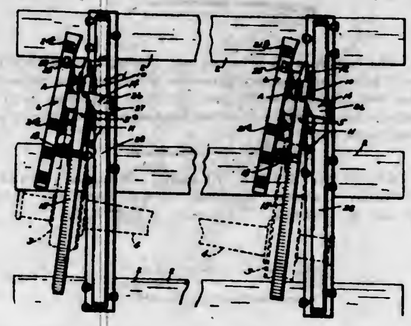
An imitation copper engraving process consisting in providing a transparent plate with a partially inactinic coating and a white supercoating; delineating the desired sketch or drawing on the supercoating, cutting through both of said coatings on the lines of the drawing with a dry point to expose the clean surface of the plate, tinting parts of the drawing by appropriately using a soft black pencil on the said supercoating, and subjecting prepared paper for the usual print process to the action of the light through the plate.

1,385,568. AUTOMATIC HOOD-CLAMP. GEORGE GUSTAV MARX, Jackson, Mich. Filed Feb. 13, 1920. Serial No. 358,505. 2 Claims. (Cl. 292—113.)



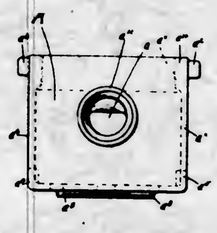
1. In combination with the frame bail and the hood bail of an automobile; of a toggle link and lever connection carried by the hood bail and comprising a link relatively permanently pivotally connected to the hood bail, a toggle lever pivoted to said link, a second link pivoted to the toggle lever and having a hook to removably engage the frame bail, said toggle lever having a stop adapted to engage said hook link when the parts are in the holding position, substantially as shown and described.

1,385,569. METHOD OF PRODUCING MULTICOPY FORMS OR BLANKS. GEORGE A. MAYER and HERBERT E. MURRAY, Cleveland, Ohio, assignors to The Manifold Printing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 21, 1920. Serial No. 353,101. 5 Claims. (Cl. 270—21.)



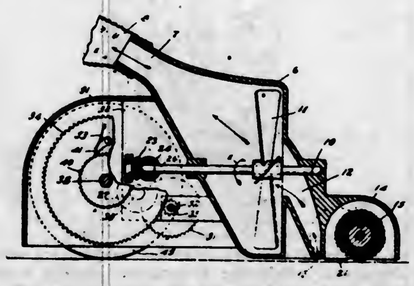
1. The method of producing multi-copy forms or blanks in superimposed continuous series which consists in dividing a web into longitudinal and transverse sections by perforating the same lengthwise and crosswise and folding the web on the longitudinal rows of perforations and in zig-zag manner on the transverse rows of perforations, and trimming off the lateral folded edges.

1,385,570. LENS. ALPHONS G. MILLER and CHARLES MCMULLEN, Flemington, N. J. Filed Jan. 12, 1920. Serial No. 350,790. 1 Claim. (Cl. 240—48.4.)



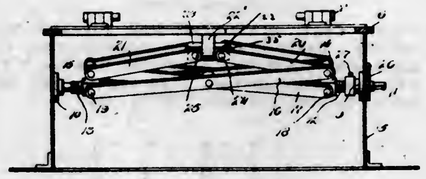
A lens of the type described having a series of substantially semi-circular depressions forming lens-like portions arranged facing downwardly, said depressions being arranged in rows both vertically and horizontally, with intermediate portions of diffusing glass between said depressions, likewise arranged in rows both vertically and horizontally, whereby each lens-like portion separately refracts the light downwardly and also diffuses it laterally.

1,385,571. CAR-REPLACER. JEREMIAH A. MOYNIHAN, Minneapolis, Minn. Filed Oct. 11, 1920. Serial No. 416,167. 12 Claims. (Cl. 104—271.)



1. A car replacer comprising a member adapted to contact the rail, a longitudinal rib member thereon and a U-shaped wedge member, one of the arms of which engages said rib member, and the other arm of which contacts the opposite side of the rail.

1,385,572. SUPPLY AND DRAIN CAP FOR ANTI-FREEZE HYDRANTS. KELSO MURDOCK, Cincinnati, Ohio, assignor to The Murdock Manufacturing and Supply Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 5, 1920. Serial No. 363,619. 5 Claims. (Cl. 137—13.)



1. A combined supply and drain cap, having side walls and a base, for hydrants, and having a series of drain perforations through its side walls and base, lugs extending from the side walls above the side perforations, and a rib formed on the exterior of the base adjoining the perforations in the base.

1,385,573. VACUUM-CLEANER. RISAKU NISHIMOTO, Tacoma, Wash. Filed Mar. 14, 1921. Serial No. 451,978. 1 Claim. (Cl. 15—60.)

A vacuum cleaner of the class described comprising a fan housing having a discharge opening and having an inlet opening that communicates with a relatively long nozzle slot, a fan mounted for rotation in said fan housing, a shaft connected with said fan and projecting rearwardly from said housing, an axle, a wheel loosely mounted on each end of said axle, ratchet means interposed between each of said wheels and said axle and arranged so that one of said wheels will drive said axle in one direction and the other wheel will drive said axle in an opposite direction, two gearwheels loosely mounted on said axle, ratchet means for locking one of said gearwheels against rotation in one direction on said axle and the other gearwheel against rotation in the opposite direction on said axle, a short shaft arranged parallel with said axle, two pinions on said short shaft, one of said pinions meshing directly with one of said gearwheels, an idler gear interposed between the other pinion and the other gearwheel, and speed acceleration gears interposed between and operatively connecting said short shaft and said fan shaft.

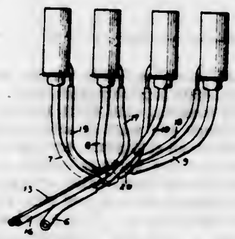
1,385,574. RAISING AND LOWERING DEVICE FOR HATCH-VENTILATORS. GEORGE W. NORDSTROM, Brooklyn, N. Y. Filed Aug. 27, 1920. Serial No. 406,376. 1 Claim. (Cl. 268—8.)

In combination with a hatch coaming having a pivoted hatch cover, a shaft rotatably mounted in bearings on the inside of said coaming, said shaft having a squared end extending through the wall of said coaming, oppositely threaded portions on said shaft, correspondingly threaded nuts on said threaded portions, swivel blocks connected to the inside of said cover, pairs of cross bars pivotally connected to opposite sides of said nuts, and pairs of bars connected to opposite sides of said swivel blocks and to the upper ends of said first mentioned bars, and spacing bushings arranged between the bars of each pair, substantially as described.

1,385,575. HINGE-COVER BOX. CHARLES H. NOWACK, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 29, 1917. Serial No. 158,155. 6 Claims. (Cl. 220—31.)

1. A box constructed of sheet material, a cover therefor, and a hinge connection between said cover and box, a part of said connection fixed to the box comprising a strip of material pivotally connected to the cover and having its ends extending through an aperture into said box, said strip being bent to provide shoulders of two thicknesses of said strip engaging the inner faces of said box at said aperture.

1,385,576. TIME AND VALUE CARD. GEORGE WILLIAM ODELL, Montreal, Quebec, Canada. Filed Dec. 19, 1918, Serial No. 267,553. Renewed Nov. 13, 1920. Serial No. 423,984. 3 Claims. (Cl. 234—41.)



1. The combination with outer parallel guides and inner guiding members beyond said guides and off center in re-

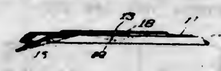
lation thereto, of a sheet of suitable material having one end reduced and adapted to enter between said inner guiding members and the other end enlarged to fit between said outer guides and direct the reduced end between said inner

guideway members, the reduced end of the card being formed by clippings made from opposite sides and of different lengths forming shoulders for engaging in setting a recording machine and for forming a stop in such setting operations.

1,385,577. CLAW STRUCTURE FOR MILKING-MACHINES. HENRY CLYDE OHEN, Columbus, Ohio, assignor to Nu-Way Milker Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 27, 1919. Serial No. 320,098. 14 Claims. (Cl. 31—101.)

1. In milking machine construction, a milk claw and an air claw designed to contact with each other without connection and so constructed that they will be held together when placed in position for operation by the complemental parts of the milking machine.

3. In milking machine construction, a milk claw and an air claw independent of each other, said claws being so constructed that the rubber tubes applied to one will hold them together while the removal of one rubber tube will permit separation.



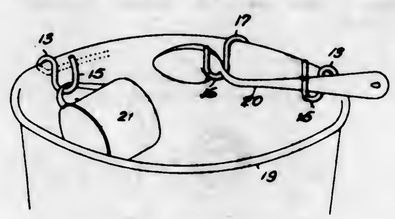
7. In milking machine construction, a milk claw comprising five conduits which are joined together in one plane and radiate substantially from a common center.

12. In milking machine construction, an air claw and a milk claw independent of each other but having their conduits so disposed that the tubes of the milking machine when placed thereon effect an interlocking action that holds said claws together.

13. In milking machine construction, a milk claw, an air claw independent thereof but comprising conduits which are curved into such relation to the conduits of the milk claw that the placing of the tubes of the milking machine in operative position will lock said air and milk claws together.

1,385,578. SAFETY-SHIELD FOR CAN-CAPS. VICTOR ODQUIST, Yonkers, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 23, 1919. Serial No. 292,109. 4 Claims. (Cl. 220—44.)

1. The combination of a can cap having formed therein a vent hole, the part of the cap displaced in making said hole forming a tubular pivot, and a safety shield mounted on said pivot under the vent hole.

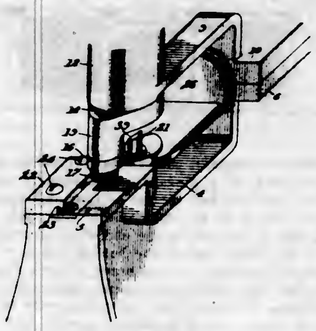


4. The combination of a can cap having formed therein a vent hole, and a safety shield in the form of a radially fluted disk arranged under said vent hole, said disk having a narrow tongue which is rebent and attached to the cover at said vent hole.

1,385,579. RAZOR-BLADE. WILLIAM EDMUND O'REILLY, London, England. Filed June 13, 1919. Serial No. 303,857. 7 Claims. (Cl. 30—12.)

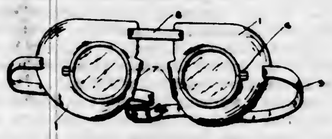
1. A razor blade comprising a cutting edge, sides, and a back provided with slots spaced apart, each of said slots having a straight portion and rounded portion connecting therewith, the curvature of the rounded portion of each slot being toward the adjacent side of the blade.

1,385,580. CUP AND SPOON HOLDER FOR COOKING UTENSILS. MINNIE A. OWEN, Charlottetown, Prince Edward Island, Canada. Filed Dec. 20, 1920. Serial No. 432,144. 7 Claims. (Cl. 65—65.)



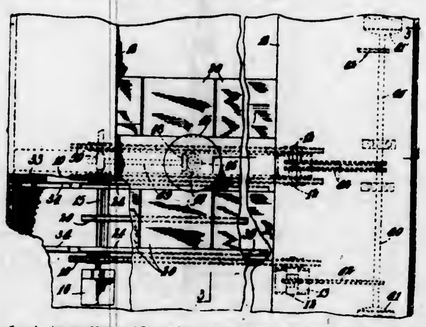
1. An attachment for cooking vessels comprising a member adapted to embrace the edge of the vessel and to be supported externally of the vessel by said embracing action, and a plurality of relatively movable hooks carried by said member and adapted to depend within a vessel.

1,385,581. LIFE-PRESERVER. GEORGE H. PALLADY, Redondo Beach, Calif. Filed Dec. 2, 1920. Serial No. 427,883. 6 Claims. (Cl. 9—17.)



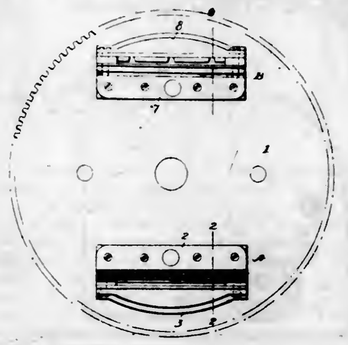
1. A device of the class described comprising a sealed air container constituting a sustaining element, a tube inclosing said container, said tube being inflated with air independently of said container, and a water-proof covering surrounding said tube.

1,385,582. WIRE-LOOP-TWISTING MACHINE. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to Edwin J. Young, Wadsworth, Ohio. Filed Apr. 21, 1919. Serial No. 291,566. 6 Claims. (Cl. 140—73.)



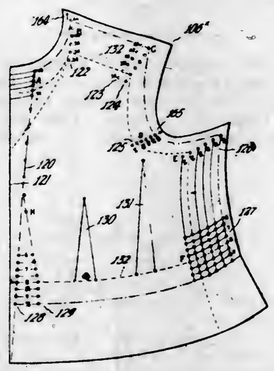
1. A machine for forming loops in wires, having a rotary reciprocating looper, a wire guide, and a rotary reciprocating twister, said looper and twister being arranged in planes substantially at right angles to one another, said twister being provided with a pin about which the looper bends the wire and thereafter clamps such bent portion between itself and the guide while the twister is turning to twist the bent portion upon the body of the wire.

1,385,583. EYE-PROTECTOR. HAROLD K. PARSONS, Southbridge, Mass. Filed June 25, 1918. Serial No. 241,774. 6 Claims. (Cl. 2—149.)



1. In a device of the character described, the combination with eye cup members having outwardly deflected flanges, of lenses, and securing means for the lenses including a spring ring, and means controlled and retained in position by the ring for securing the lenses to the flanges.

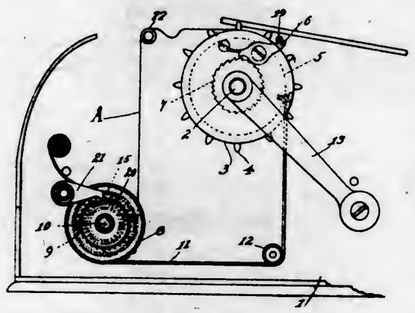
1,385,584. MOVING SIDEWALK. ANDREW PELESKEY, Martins Ferry, Ohio. Filed Apr. 2, 1921. Serial No. 457,923. 5 Claims. (Cl. 104—25.)



1. A traveling sidewalk comprising a series of sprocket chain wheels over which said chains are looped in horizontally disposed upper and lower reaches, means pivotally attaching the plates at one end to the chains, upper and lower tracks supporting the other ends of the plates as they move forwardly and backwardly respectively, said tracks having curved sections at their ends adapted to maintain the plates in substantial parallelism as they reverse their direction of movement.

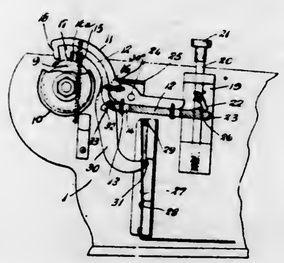
1,385,585. TYPOGRAPHICAL MACHINE. HANS PETERSEN, Davenport, Iowa, assignor to The Linograph Company, Davenport, Iowa, a Corporation. Filed Feb. 27, 1920. Serial No. 361,880. 14 Claims. (Cl. 199—49.)

4. An assembling mechanism for assembling matrices at two levels, in combination with a carrier for casting at three levels.



1,385,586. DRESS-PATTERN-DRAFTING TEMPLET. MARION RICHARDS, Sydney, New South Wales, Australia. Filed Feb. 11, 1920. Serial No. 357,946. 1 Claim. (Cl. 33—13.)

A templet for laying off waist patterns, comprising a front chart and a back chart, each having a substantially horizontal row of perforations below the arm scye, an angularly disposed row of perforation intermediate the arm scye, a plurality of angularly disposed rows of perforations above the arm scye, a row of perforations at the neck, that of the front chart being curved and that of the back chart substantially vertical, and a row of perforations adjacent to one edge of each chart, said row being angularly disposed with relation to the edge of the chart, all of said rows of perforations being graduated to indicate bust measurements, each of



said charts also having a plurality of rows of perforations disposed in approximately parallel relation with the lower edge of the chart and a row of perforations in alinement with the said rows and with the angularly disposed edge row, the perforations of said rows being graduated to indicate arm measurements and said front chart having an additional row of perforations diverging from said angularly disposed edge row below the bust and forming with said edge row two angularly disposed rows of perforations near the waist line.

1,385,587. AUTOGRAPHIC REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Nov. 15, 1919. Serial No. 338,154. 6 Claims. (Cl. 282—16.)

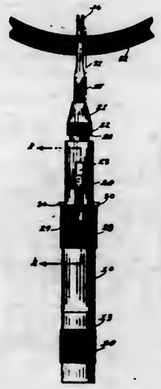
1. In an autographic register, the combination with a rotary feed device for feeding a plurality of strips of paper together with a record strip, all of said strips to receive impression copies of the topmost one thereof, of a roll for storing the record strip, a rotating spring impelled body, and a trip device controlled by the feed device for timing the motion thereof free of the feed device, said roll for storing the record being actuated by said rotating spring impelled body.

1,385,588. AUTOGRAPHIC REGISTER. JOHN Q. SHERMAN and CLARENCE R. BUSCHMEYER, Dayton, Ohio, assignors to The Standard Register Company, Dayton, Ohio, a Corporation of Ohio. Filed May 25, 1917. Serial No. 170,805. 6 Claims. (Cl. 192—116.)

1. In a motor feed device for intermittent feeding devices, in combination with electric motor means for operating the feeding device, a switch therefor, and a controlling device comprising a rotary notched element, a pivoted arm having a nose to ride on said rotary element, and to latch into said notch, and a pawl to rock said arm, said arm having a switch control member thereon.

1,385,589. FOLDING SCREEN-TENT FOR OUTDOOR BEDS. JOSEPH H. SHENEY, Decatur, Ill. Filed Apr. 19, 1921. Serial No. 462,526. 1 Claim. (Cl. 5—14.)

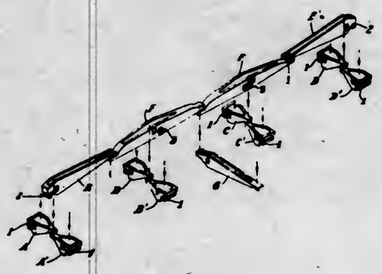
A folding screen tent, comprising collapsible top braces, each consisting of a plurality of connected sections, a stiffening web attached to one section and supporting a connected section at the open side of the joint, a bottom brace joined at one end to the end of a top brace, a lock-notch at the other end of the bottom brace, a coöperating catch on one end of a top brace, a mesh fabric covering over the top braces, end pieces, coöperating snap-button fasteners to connect the end pieces with the end top braces, an insect proof entrance closure, and means to hold the erected screen taut.



1,385,590. LOOSE-LEAF FILE OR BINDER. WILLIAM D. SHOEMAKER, Drummond, Md. Filed Nov. 17, 1919. Serial No. 338,684. 5 Claims. (Cl. 129—15.)

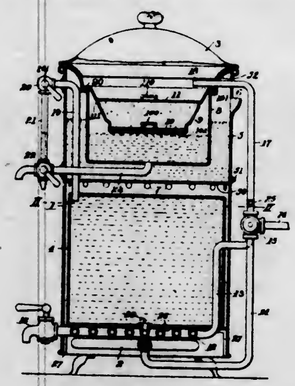
1. In a file or binder, the combination of cover members, fastening means for connecting the same, and a file unit held by said fastening means between said cover members and comprising a plurality of separator sheets and means for holding said sheets in a pile in a collapsed condition of the unit or in a fixed relationship with each other in a spread out condition of the unit.

5. A file unit comprising a plurality of separator sheets, and connecting members therefor in the form of fluted extensions upon said sheets, one section of the fluted extension being attached to the adjacent separator sheet.



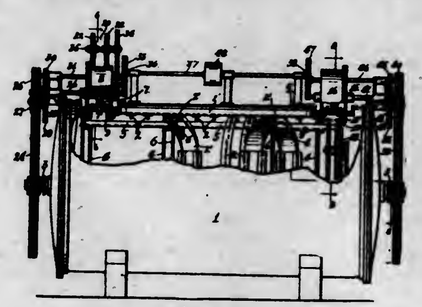
1,385,591. REPAIRING DEVICE FOR BICYCLE-TIRES. ROMAN STAFIEJ, Detroit, Mich. Filed Jan. 21, 1921. Serial No. 438,873. 3 Claims. (Cl. 152—27.)

3. In a tool of the character described, the combination, of a hollow cylindrical body having a longitudinal



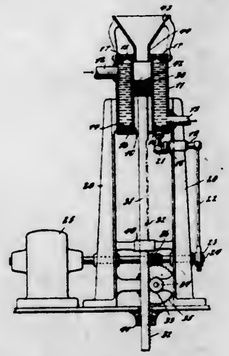
slot, with a screw-threaded and slotted nipple upon the upper end of said body adapted to receive the offset lower end of a forked needle, an interiorly screw-threaded cap having a conical upper part adapted to be screwed upon said nipple, a means for catapulting a rubber band into a tire puncture hole upon the introduction of the forked needle into the same, and a means for storing auxiliary needles in the lower end of said body.

1,385,592. SCALE. MORTON H. STARR, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Jan. 20, 1920. Serial No. 352,817. 31 Claims. (Cl. 265—71.)



1. In a scale, in combination, a lever having spaced bearings and an opening centered therebetween, and a load transmitting member disposed through said opening and having an operative connection with said spaced bearings whereby said member is pivotally movable in a plurality of planes.

1,385,593. COFFEE-URN. HENRY J. STROHBACH, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,624. 6 Claims. (Cl. 53—3.)

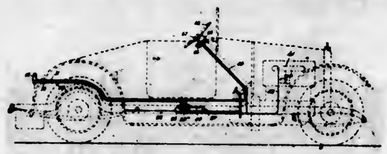


1. In a coffee urn, the combination with a casing, of a water heating tank in the lower portion thereof, a percolator in the upper portion of said casing, a pipe for supplying water to said tank, a valve in said pipe, and a pipe leading from said valve to the percolator for conducting hot water from the tank to the percolator through said latter pipe and part of the water supply pipe, said valve being adapted to place the percolator in communication with the tank or said tank in communication with the water supply.

1,385,594. PRESSURE-COOKER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barn-Grover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Sept. 29, 1920. Serial No. 413,589. 13 Claims. (Cl. 126—272.)

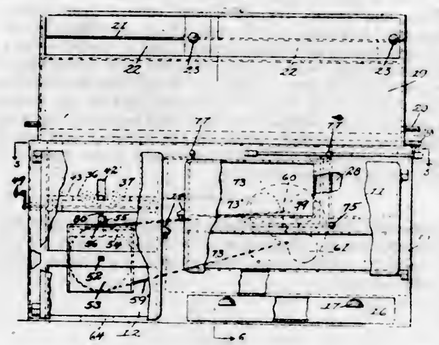
1. In a pressure cooker, and in combination with its shell, and means for advancing canned goods therethrough, a can-passing valve-structure comprising a casing communication with said shell, and a rotatable valve-member within said casing, provided with a peripheral series of can-pockets, adapted to be brought successively into register with the communication between the casing and shell; and packing rings mounted in the casing with their faces yieldingly fitted to the sides of said valve member, and their rims yieldingly fitted to the inner surface of the casing periphery.

1,385,595. APPARATUS AND METHOD FOR CASTING. CORNELIUS W. VAN RANST, New Rochelle, N. Y. Filed Aug. 26, 1919. Serial No. 320,010. 4 Claims. (Cl. 207—11.)



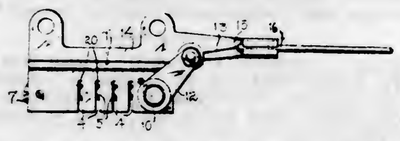
1. The method of casting bars which consists in pouring molten metal into one end of a short mold having an opening of substantially uniform cross section, cooling the metal in the mold, withdrawing the cooled metal from the opposite end of the mold while continuing to pour molten metal into the opposite end of the mold and reciprocating the mold relatively rapidly longitudinally of its length while the pouring and removal is continued.

1,385,596. AUTOMOBILE-SIGNAL. JOSIAH HOWARD VAN SCIVER, Philadelphia, Pa. assignor to Automobile Appliances Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1921. Serial No. 450,691. 7 Claims. (Cl. 116—39.)



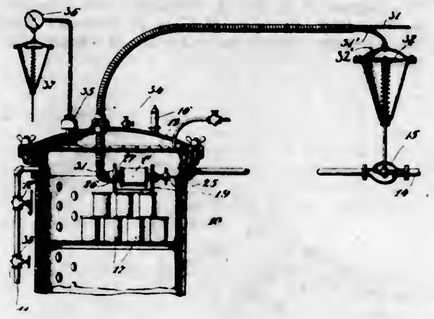
1. A signaling device comprising a support, a direction-indicating member pivoted thereon, a cylinder, a piston

movable therein and connected with said member, a plurality of suction connections communicating with said cylinder whereby suction is produced in said cylinder to draw said piston to two different positions therein and



thereby adjust said member to two operative positions distinct from one another and indicating right and left changes of travel respectively and valve mechanism for selectively controlling said connections.

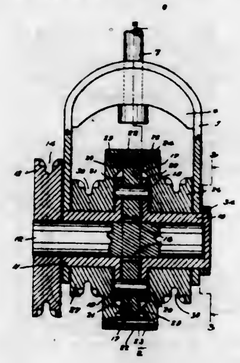
1,385,597. GAS AND COAL STOVE. WILHELM WADLER, Weehawken, N. J., assignor of one-half to Joseph Hoch, West Hoboken, N. J. Filed May 11, 1920. Serial No. 380,569. 2 Claims. (Cl. 126—36.)



1. A stove of the character described comprising in combination, a chambered body, a plurality of flues in said body, means for connecting said flues with a chimney, means for controlling said flues, a fire box constituted by one of the stove chambers, a revolving grate in said body, a frame for said grate, a means for raising and lowering said frame and grate, an ash receptacle below said grate, a plurality of slats transversely arranged within said receptacle, a sieve formed with the side and bottom walls of said receptacle, a plurality of shaker bars disposed in said receptacle, a common operating rod for said slats, constituting a gas burner, means for supplying gas to said burner, a shaft for said receptacle journaled in the rear and front wall of the stove, a sprocket wheel on said shaft, and a fan operated from said shaft and sprocket wheel during the sifting operation for removing the dust.

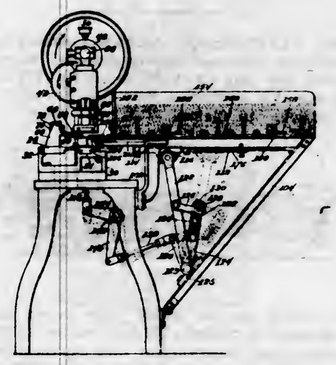
1,385,598. SAFETY-RELEASE-WIRE HOLDER FOR AERIAL BOMBS. HARRY D. WEED, U. S. Army. Filed June 7, 1919. Serial No. 302,587. 2 Claims. (Cl. 244—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a safety release wire holder for bombs, a body portion provided with a passage-way and wire receiving slots communicating with said passage-way, wire holding elements in said passage-way, and means for holding said elements in yielding contact.



1,385,599. METHOD AND DEVICE FOR CONTROLLING PRESERVING APPARATUS. WILLIAM P. WHITE, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 9, 1919. Serial No. 288,725. 47 Claims. (Cl. 99—2.)

1. In the art of preserving, the method residing in subjecting sealed packages to influences which tend to modify their structural form, and regulating the application of said influences by structural modifications of a package subjected thereto.



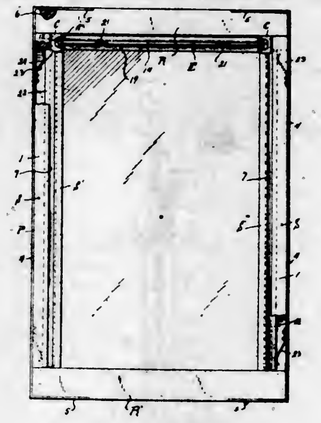
15. In a preserving apparatus, a device for regulating the application of fluid pressure to containers, comprising means for supporting a specimen container, means for impressing fluid pressure on the exterior of the container, and means operable by a portion of the container for controlling the operation of said last mentioned means.

1,385,600. CHAIN-HOIST. HAZEN F. WILLETT, Seattle, Wash., assignor of one-half to John R. Forman, Seattle, Wash. Filed Mar. 9, 1920. Serial No. 364,441. 4 Claims. (Cl. 254—171.)

1. A chain hoist comprising a shaft, means for turning said shaft, a gear wheel rigid with said shaft, two sleeves disposed on said shaft on opposite sides of said gear wheel, means supporting said sleeves against rotation, a plurality of pinions journaled on said sleeves and meshing with said gear wheel on said shaft, a ring gear meshing with all of said pinions, and a chain receiving pulley rigidly secured to each side of said ring gear, one of said chain receiving pulleys being larger than the other.

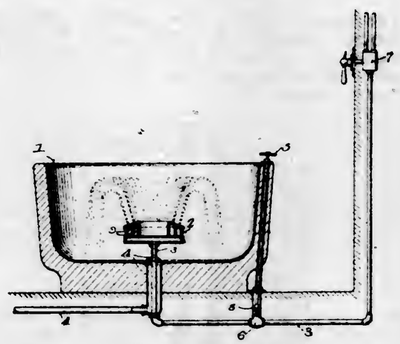
1,385,601. STOCK-CUTTING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 7, 1916. Serial No. 89,542. 50 Claims. (Cl. 164—48.)

1. A machine for cutting shoe stock having, in combination, a support for positioning a sheet of stock, a cutter, a cutting block coöperating with the cutter, means to relatively move the cutter and block to make a cut, a stop movable with the cutter for determining the longitudinal advancement of the stock preparatory to making a cut, means to relatively move the cutter and stock transversely of the support before making each cut to position the cutter for cutting a blank, and means for advancing the stock.



1,385,602. REINFORCING-BAND FOR METAL CONTAINERS. ANSON J. BENTLEY, Niles, Ohio. Filed Apr. 26, 1920. Serial No. 376,667. 2 Claims. (Cl. 220—73.)

1. A reinforcing band for a receptacle recessed on its exposed face to receive the outer ends of the rivets which hold together the band and receptacle and recessed on its inner face to receive bent in portions of the receptacle wall surrounding the rivets to thus permit the inner ends of the rivets to lie flush with the surface of the receptacle wall.

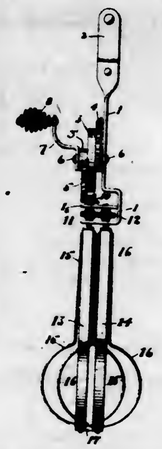


1,385,603. WINDOW-CLEANING DEVICE. GEORGE T. BLOOMINGDALE, Parkersburg, W. Va. Filed Apr. 2, 1921. Serial No. 458,134. 4 Claims. (Cl. 15—59.)

1. A sash structure including stiles provided with slots extending lengthwise thereof, a carriage slidably mounted in each of the slots and including wings overlying the opposite faces of the stiles, a wiping element supported by the wings at each side of the structure, and means for normally closing each of the slots, said

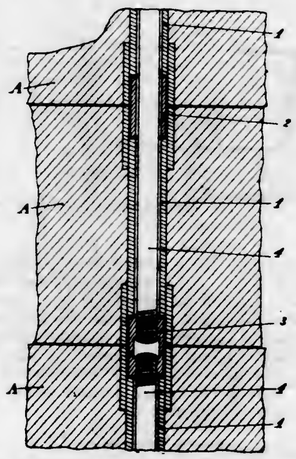
means coacting with the carriages for normally maintaining the same at the limit of their movement in one direction.

1,385,604. LAVATORY. HARRY L. BRADLEY, Milwaukee, Wis., assignor of one-half to Lynde Bradley, Milwaukee, Wis. Filed May 31, 1919. Serial No. 300,978. 7 Claims. (Cl. 4—1.)



1. In a lavatory the combination of a receptacle provided with a waste outlet leading from the lower part thereof, and a fountain located within said receptacle and provided with a water supply connection and adapted to project upwardly and obliquely a plurality of closely associated non-interfering fine streams of water and to cause them to fall inertly, clear of the fountain, into the receptacle, without the falling streams mixing with the upwardly projected streams.

1,385,605. OPERATING DEVICE FOR BEATERS. JAMES O. H. CAZENOVE, New York, N. Y., assignor of one-third to Ray B. Whitman, Bridgeport, Conn. Filed Feb. 18, 1920. Serial No. 359,672. 3 Claims. (Cl. 74—50.)

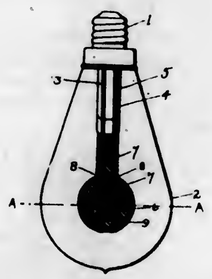


1. In a device of the class described, the combination of a supporting frame, a hub pivoted in the frame and

provided with a handle, a circular disk centrally mounted on the hub, a pair of sector plates provided with bevel teeth on their peripheries and so positioned on opposite sides of the circular disk that the bevel teeth of each sector plate face toward the disk but on opposite sides

of the hub, a bevel-tooth pinion journaled in lateral extensions of the frame and disposed to mesh alternately with the bevel teeth of each sector plate, the disk hub, and plates being all integrally attached, and a pair of spur gears operatively connected to the bevel pinion and mounted in the lateral extensions.

1,385,606. DEVICE FOR JOINING CONCRETE BLOCKS DISPOSED IN A PILLAR OR IN SERIES. JÖRGEN ANTON FREDERIK CHRISTENSEN, Odense, Denmark. Filed Oct. 16, 1916. Serial No. 125,996. 4 Claims. (Cl. 72—101.)

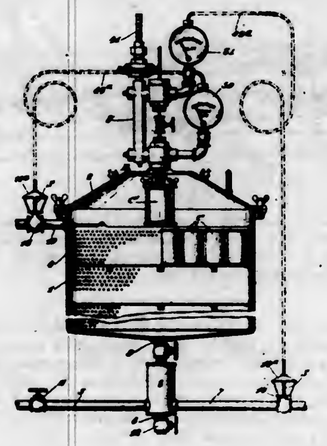


1. A device for joining concrete blocks comprising a pipe embedded in each of said blocks, said pipes forming a continuous passage when the blocks are placed in position with relation to one another, a plurality of bolt members arranged in alinement with each other in said passage, a coupling member connecting the adjacent ends of said bolt members, said coupling member projecting into the passage of adjacent pipes and being of a size in cross-section approximately equal to the cross sectional area of the passage for preventing transverse movement of one block relatively to an adjacent block, and means for clamping the two extreme ends of the bolt members to the end blocks.

1,385,607. CLASP-BRAKE. JAMES M. COLEMAN and KARL F. NYSTROM, Montreal, Quebec, Canada. Original application filed May 31, 1917, Serial No. 172,130. Divided and this application filed Dec. 26, 1917. Serial No. 208,909. 19 Claims. (Cl. 188—205.)

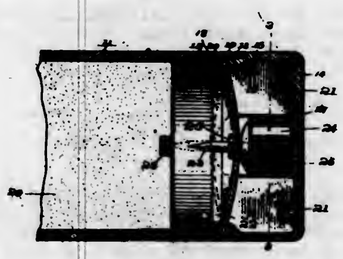
1. In a brake gear for use in trucks having transverse frame members at different heights, balance springs bent intermediate their ends whereby they may be attached in normal position to the upper level frame members or in inverted position to the lower level frame members, while maintaining the free extremity in a single horizontal plane.

1,385,608. INCANDESCENT LAMP. WILLIAM A. DARRAH, Swissvale, Pa. Filed Nov. 23, 1914. Serial No. 873,644. 15 Claims. (Cl. 176—16.)



9. An electric lamp comprising a transparent container surrounding a radiating member consisting of a conductor supported in boron nitrid and an economizing chamber arranged above said radiating member.

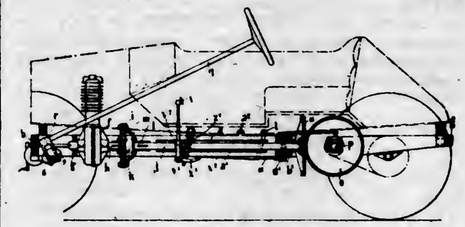
1,385,609. AUTOMATIC CONTROL FOR PROCESSING APPARATUS. CHAUNCEY H. DURKEE, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed May 26, 1920. Serial No. 384,397. 27 Claims. (Cl. 99—2.)



1. In an apparatus for treating packages, the combination of a movable detecting member, supporting means for supporting a package with a wall portion in operative association with said member, pressure means for subjecting the package to external fluid pressure, a controlling device for controlling the pressure means by operation of the detecting member, and variable interconnections between the detecting member and the controlling device whereby the effectiveness of the former upon the latter may be varied selectively.

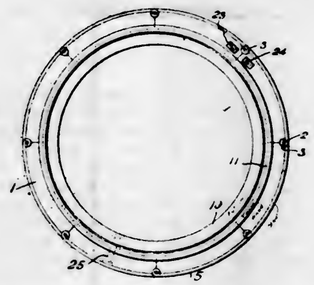
27. A processing apparatus comprising in combination, a retort for inclosing packages for treatment, a valve for controlling supply of fluid to the retort, a motor device operable by fluid pressure for operating the valve, and a detecting member operable by expansive movement

of a package in the retort to vent pressure fluid from said motor device and to cut off the pressure fluid to said device.



1,385,610. PERCUSSION-FUSE. JOHN FLAM, U. S. Army, assignor to the Secretary of War of the United States of America. Filed Jan. 2, 1919. Serial No. 269,381. 1 Claim. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

In combination with a casing containing an explosive charge, a primer for igniting said charge, a cap secured to the casing and forming therewith an annular groove, guide ribs formed on the interior of said cap, a spring plate having its periphery situated in the annular groove and slidable therein, a firing pin secured to the plate and normally held thereby in spaced relation to the primer and a weight secured to the firing pin for placing initial tension on the plate, said weight guided in its movement by the guiding ribs.



1,385,611. MOTOR-CAR. JEAN GANGLOFF, Levallois-Perret, France. Filed Dec. 22, 1919. Serial No. 346,516. 5 Claims. (Cl. 180—64.)

1. In a light motor vehicle, a chassis including longitudinals of sufficient elasticity to permit of elimination of springs, and front and rear cross bars of hard and flexible wood assembled together by means of metal brackets, the arm ends of which are connected by plate

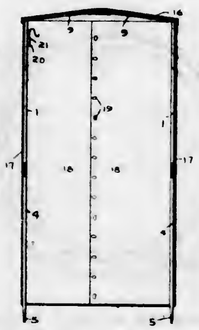
springs, the front cross bar forming an axle for the vehicle steering wheels.

1,385,612. EMERGENCY AUTOMOBILE-TIRE. CHARLES G. GERLACH, Spokane, Wash. Filed Jan. 22, 1920. Serial No. 353,376. 4 Claims. (Cl. 152—23.)

3. An emergency tire for motor vehicles comprising a plurality of abutting curved tire sections adapted to be pivotally connected to form a continuous jointed tire, each section having upon its outer surface recesses in its ends at its outer peripheral edge, each tire section having upon its outer surface a protective band of metal formed with eyes at its ends seating in the recesses in the ends of the tire section substantially flush with the ends of said tire section, the eyes of abutting sections overlapping, and means inserted in each of said overlapping pairs of eyes for pivotally connecting adjacent tire sections.

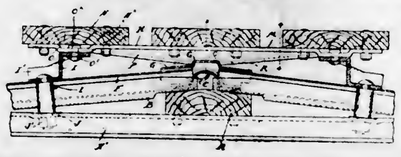
1,385,613. PISTON-RING. MIDDLETON S. GILL, San Francisco, Calif. Filed Apr. 27, 1920. Serial No. 377,110. 11 Claims. (Cl. 74—109.)

1. The combination with a piston grooved to receive piston packing means, of piston packing means carried by such piston and fitting the grooved portion thereof, such packing means comprising ring means grooved in the outer periphery thereof and also grooved in the



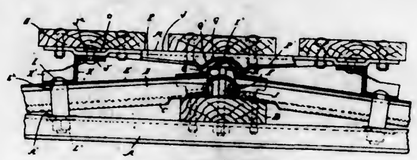
oppositely facing edges thereof, such ring means also having channels extending from such grooves in the oppositely facing edges outwardly to the outer periphery of such ring means.

1,385,614. LINGERIE-CLASP. WALTER E. HALLAM, Pawtucket, R. I. Filed Jan. 24, 1920. Serial No. 353,682. 6 Claims. (Cl. 24—259.)



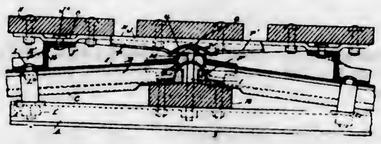
1. A lingerie clasp comprising an elongated strip of flexible material reversely curved at its middle portion to form two approximately parallel hooked arms and having formed on the opposite lateral edges of one arm a pair of opposed curvilinear wings provided with central apertures, substantially as and for the purpose described.

1,385,615. PORTABLE BATHHOUSE. JAMES CARLTON HAMMOND, Jacksonville, Fla. Filed July 22, 1920. Serial No. 398,232. 2 Claims. (Cl. 135—4.)



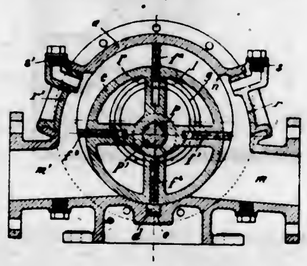
2. A portable structure including a central block, arms hingedly connected to the respective sides of the block and foldable together, fastening means movably connected to one of the arms and extending across the top face of the block and detachably connected to the opposed arm, said block being held by gravity in abutment with the inner ends of the arms when the arms are extended, supports for the arms, means detachably engaging the supports for holding them extended, said supports having pointed ground engaging ends, a one piece fabric housing having a top portion bearing downwardly on the block and arms, wall portions extending along and between the supports, and flaps between two of the supports, and means for engaging the flaps to hold them closed.

1,385,616. CAR-ROOF. DAVID W. HAWKSWORTH, Detroit, Mich., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 30, 1918. Serial No. 252,000. 12 Claims. (Cl. 105—457.)



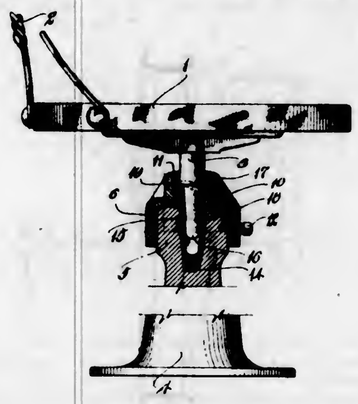
1. In a car roof having a weather-proof cap, a running-board saddle secured to said car roof only beyond said cap and provided with means engaging said cap for retaining the same in place.

1,385,617. CAR-ROOF. DAVID W. HAWKSWORTH, Detroit, Mich., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 30, 1918. Serial No. 252,001. 18 Claims. (Cl. 105—457.)



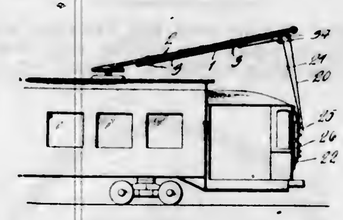
1. In a car roof, the combination with a carline, and a carline cap, of a running-board saddle above said carline cap, and a connection for securing said saddle to said carline, extending through said cap.

1,385,618. RUNNING-BOARD SADDLE. DAVID W. HAWKSWORTH, Detroit, Mich., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Original application filed Aug. 30, 1918, Serial No. 252,001. Divided and this application filed Mar. 11, 1920. Serial No. 364,942. 5 Claims. (Cl. 105—457.)



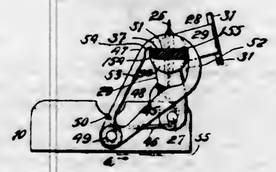
1. A running board saddle having a concavo-convex portion embracing the head of a junction cap bolt to weather proof the same.

1,385,619. ROTARY PUMP WITH SLIDING PLATES. EDMOND HENRY, Paris, France. Filed May 10, 1920. Serial No. 380,381. 3 Claims. (Cl. 103—44.)



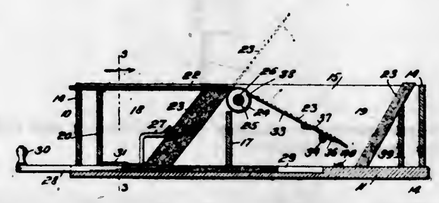
1. A rotary pump with sliding plates comprising, in combination, a cylindrical pump body having intake and delivery passages, a rotary piston with sliding plates and mounted eccentrically with reference to the cylinder, two ring-shaped members freely rotatable by their outer edges within bored out recesses in the end plates of the pump body and concentric to the cylinder, and having their inner edges engaging grooves provided in the sides of the sliding plates, which grooves are wider than the said edges and elastic means provided upon each sliding plate between the said plate and the said ring-shaped member in order to allow the plate to enter within its groove in the piston while passing over an accidental obstacle on the walls of the cylinder.

1,385,620. SWIVELED CHAIR. GEORGE W. HULL, Seattle, Wash. Filed Oct. 25, 1920. Serial No. 419,434. 3 Claims. (Cl. 155—95.)



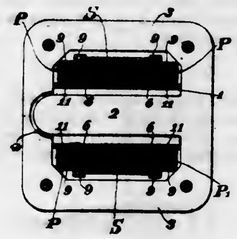
1. The combination with the standard having a socket therein and the revoluble chair body having a post and tapered bearing point, of a coupling head fixed on the standard, a reduced sleeve on the coupling head having a pair of interior cam faces, a spring between the standard and the post, and a pin on the post to engage said cam faces as described.

1,385,621. TROLLEY-POLE RETRIEVER. BENJAMIN F. JOHNSON, Baltimore, Md. Filed Apr. 23, 1921. Serial No. 463,740. 8 Claims. (Cl. 191—92.)



1. A trolley pole retriever comprising a detachable elongated barrel, means for attaching said barrel to said trolley pole, a retrieving spring within said barrel, and clutch means for actuating said retrieving spring.

1,385,622. RAZOR-BLADE-SHARPENING MACHINE. SAMUEL KANNER, New York, N. Y. Filed Aug. 18, 1919. Serial No. 318,359. 2 Claims. (Cl. 51—80.)

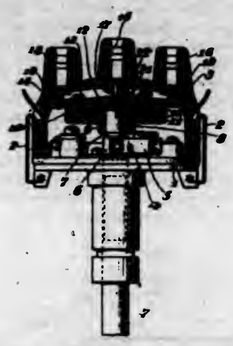


1. A razor-blade sharpener of the character described comprising an open-top box, rotary sharpening rolls therein, a frame movable toward and from said rolls, a rotatably mounted blade holder carried by said frame and blade reversing means for automatically reversing said blade holder including an actuating traveler on the end of said blade holder, a bar pivoted on said box and containing an opening therein receiving said traveler and having surfaces to coöperate therewith for reversing the blade holder and a spring pressing the said bar against said traveler, said bar being an integral closed one-piece frame presenting unbroken outer edges and confining on all sides said traveler in the opening formed therein.

1,385,623. KINDERGARTEN APPARATUS. JAMES L. KELLOGG, New York, N. Y. Filed Oct. 30, 1920. Serial No. 420,622. 8 Claims. (Cl. 35—9.)

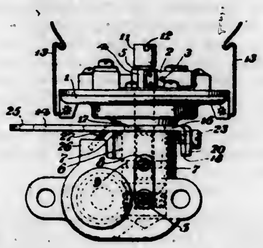
1. Apparatus of the character described comprising a box affording front and rear chambers or compartments, a plurality of independent object cards for successive display to be stacked in said front compartment, manually operative means engaging the back of the stack for feeding the successive cards upwardly to exposure position, means pressing the stack against said feeding means, and means at the back of said feeding means to receive the successive cards exposed at the front thereof and passing over the same and serving as means to stack the cards in said rear compartment.

1,385,624. INDUCTION-COIL-HEAT-DISSIPATING STRUCTURE. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Feb. 17, 1920. Serial No. 359,396. 10 Claims. (Cl. 175—360.)



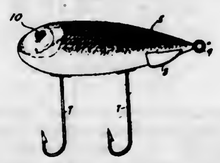
1. The combination with a current conducting winding, of means for conducting heat therefrom comprising a member lying adjacent said winding in heat absorbing relation thereto and having fins lying beyond said winding, said member having a core flange surrounded by said winding.

1,385,625. DISTRIBUTER STRUCTURE. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Mar. 30, 1920. Serial No. 370,003. 7 Claims. (Cl. 200—20.)



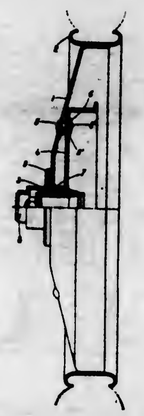
1. The combination with relatively rotating distributer member and distributer terminals, one of which is disposed substantially in the axis of rotation, of a contact

secured to said member and adapted to spring away from said member toward said one of said terminals, and means



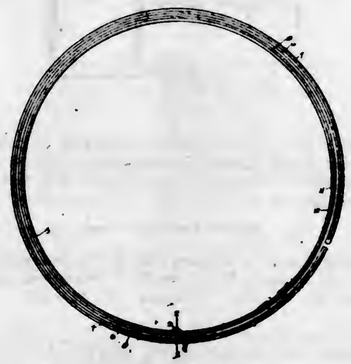
on said member for limiting the separation of said contact from said member.

1,385,626. IGNITION TIMER STRUCTURE. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Apr. 16, 1920. Serial No. 374,264. 19 Claims. (Cl. 200—19.)



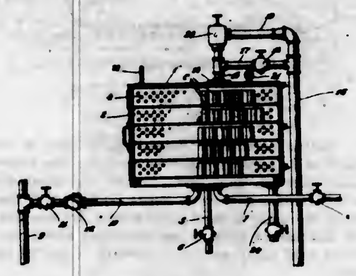
1. An ignition timer arm adapted to be clamped to an angularly adjustable member of ignition timing apparatus comprising a lever arm of sheet metal, and lug structure thereon for clamping said lever arm edgewise to said angularly adjustable member.

1,385,627. PLUG-BAIT. LEAVITT J. LANE, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed June 14, 1921. Serial No. 477,362. 2 Claims. (Cl. 41—29.)



1. A method of finishing plug-bait for casting, consisting in treating the surface of a plug with a filler and allowing the same to dry, then treating the filled surface of the plug with decalcomania varnish, then, before the said varnish is completely dry, applying decalcomania stripe to the plug, then removing the decalcomania stripe, then finishing the nose and belly of the plug, then applying waterproof varnish over the entire surface of the plug, and finally applying trimmings to the plug.

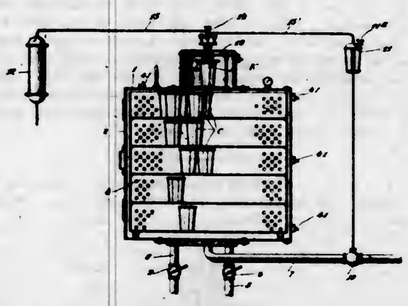
1,385,628. SHEET-METAL WHEEL. PIERRE L. LAUBB, Boulogne, France, assignor to Louis Renault, Billancourt, France. Filed Feb. 25, 1920. Serial No. 361,191. 2 Claims. (Cl. 301—9.)



1. In a sheet metal wheel of the disk type, the combination of a hub supporting a brake drum or the like, a central opening formed in the web of said wheel, means connecting the web of the wheel with said brake drum or the like at a point removed from the central opening, and a cap or nut carried by said hub for clamping the portion of said wheel adjacent the central opening thereof to the hub, whereby the portion of the web of the wheel between the brake drum connection and the center thereof will be forced inwardly and flexed and a resilient connection produced.

1,385,629. SPRING-TIRE FOR VEHICLE-WHEELS. ALBERT K. LOVELL, New Hartford, Conn. Filed July 10, 1919. Serial No. 309,819. 2 Claims. (Cl. 152—8.)

2. A spring tire comprising a band doubled upon itself near one end, the band given a convolution and again reversed and coiled within the outer convolution, the band near its inner end doubled, to form an eye, and then continued in a reverse direction to form a convolution of predetermined size and again doubled to form an eye, the inner end of the band being turned backward and outside the inner convolution, the said eyes being formed with interlocking knuckles and a pin extending through said knuckles whereby they are connected together.

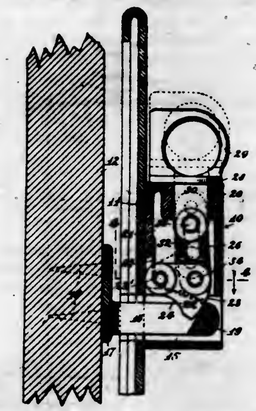


1,385,630. METHOD AND APPARATUS FOR COOLING PACKAGES IN PROCESSING. GEORGE W. LUHRMANN, Jersey City, N. J., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 8, 1920. Serial No. 350,237. 13 Claims. (Cl. 99—2.)

1. In the processing of materials in sealed packages, the method which resides in maintaining the packages under an adequate external pressure to counteract internal pressures while subjecting them to a continuous circulation of cooling fluid and controlling the relief of pressures supplied to the packages by pressures developed in the supplying of cooling fluid to the packages.

4. In an apparatus for preserving, the combination of a retort, means for sustaining packages within the retort, means arranged to introduce a cooling liquid into the retort below packages therein, means arranged to withdraw cooling liquid from the retort above packages therein, means operable directly by pressure within the retort for controlling the introduction of fluid pressure into the retort, and relief means associated with the discharge means and operable by pressures within the retort to permit relief of fluid pressure therefrom.

1,385,631. DEVICE FOR CONTROLLING PRESSURE-PROCESSING. GEORGE W. LUHRMANN, Jersey City, N. J., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 8, 1920. Serial No. 350,238. 32 Claims. (Cl. 99—2.)



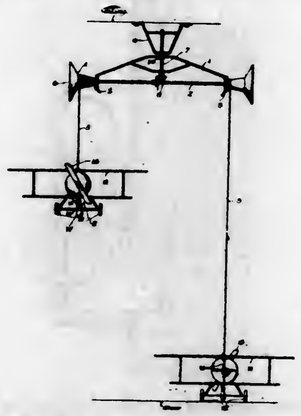
1. An apparatus for controlling processing, comprising a receptacle adapted to inclose a package, means for applying heat to a package so inclosed, means for applying pressure externally to such package to counteract pressures developed therein by the heat, a controlling device disposed externally of the receptacle and operable to regulate the pressure applied to the package and means operable by a sealed package within the receptacle and effective upon the controlling device.

20. In a processing apparatus, in combination with a retort, a pressure operated device disposed outside the retort, a movable detecting member operable inside the retort for controlling the operation of the pressure operated device, and means for sustaining a package within the retort in operative association with the detecting member.

31. In a processing apparatus, the combination of a receptacle for a package, means for applying fluid to a package within the receptacle, a valve mounted outside of the receptacle and controlling the application of fluid, and a detecting element effective upon the valve and movable relative thereto by a package within the receptacle.

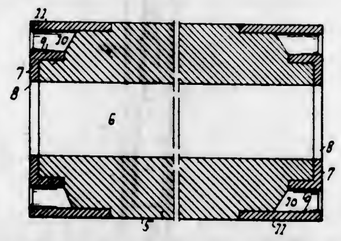
1,385,632. LATCH. LEO F. MCNALLY, Brooklyn, N. Y., assignor to David W. Pye, Red Bank, N. J. Filed Jan. 8, 1920. Serial No. 350,113. 3 Claims. (Cl. 292—227.)

1. A latch comprising a casing, a keeper, a latch bolt pivotally secured within said casing adjacent the bottom wall thereof, which passes beyond the extremity of the keeper as the latch moves into locked position, resilient means engaging said latch bolt and adapted to hold the same in extended position for engagement with said keeper, a lift slidably carried by said casing and provided with a finger-engageable portion, and means associated with said lift and said latch bolt, providing for the manual raising of said bolt by said lift and the independent raising of the bolt by the keeper.



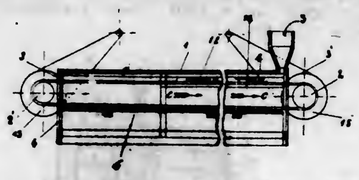
1,385,633. FISHING-TOOL. JAMES TIMOTHY MALONEY, Tulsa, Okla. Filed Sept. 15, 1920. Serial No. 410,365. 2 Claims. (Cl. 294—102.)

1. In fishing tools, a socket having its bore provided with an inwardly flaring portion near its lower end, and



slips in the said portion having inclined outer walls cooperating with the walls of the flaring portion to move the slips inwardly when they are moved forwardly, a jarring pin connected with the socket and extending coaxially of the bore from the upper end toward the slips, a sleeve encircling the jarring pin and resting at its lower end on the slips, and a spring between the upper end of the sleeve and the socket, said jarring pin and socket having openings for permitting the discharge of water from the socket upwardly and outside of the same.

1,385,634. MECHANICAL TOY. PERCY ANDRESS MARSHALL, Los Angeles, Calif. Filed Dec. 18, 1920. Serial No. 431,768. 7 Claims. (Cl. 46—40.)

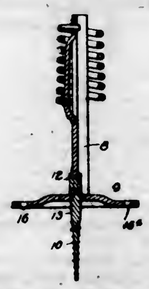


1. A toy comprising a support, a shaft journaled longitudinally of the support, a reel secured to each end of the shaft, flexible members winding on the reels in opposite directions, a representation of an airplane supported by each flexible member, means for mounting the support to rotate about a vertical axis, and means controlled by the turning of the shaft for revolving the support about said axis, each of the said representations having a hook, a weight for connection with the hook, said hooks being inclined to release the weight when the representations assume a predetermined position of inclination from centrifugal action, and a bomb carried by the hook of one of said airplanes.

1,385,635. WOODEN SHELL. ADOLPHUS J. MARTIN, Passaic, N. J. Filed Oct. 4, 1920. Serial No. 414,702. 3 Claims. (Cl. 242—68.)

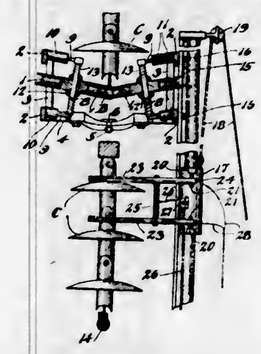
2. A shell comprising a body with a reduced end and an angular bore, a metal reinforcing head member having a hub member with an angular central hole registering with the bore, a flange projecting inwardly contiguous with the hub member, a series of arms extending from the flange embedded in the body, and a rim formed on the arms fitted in the reduced end of the body.

1,385,636. APPARATUS FOR COOLING MATERIALS. MAURICE MATHY, Liege, Belgium. Filed July 17, 1919. Serial No. 311,666. 3 Claims. (Cl. 34—12.)



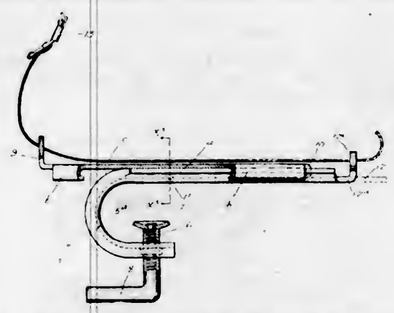
1. A cooling apparatus, comprising a box; a conveyer composed of an endless band for carrying the material to be cooled through said box; means for separating the spaces situated, respectively, above and beneath the upper stretch of the endless band; and means for causing a current of cold air to pass in one direction above the upper stretch of said band and then beneath it in the opposite direction.

1,385,637. PRINTING-PRESS GAGE. EDWARD L. MAGILL, New York, N. Y. Filed Oct. 18, 1916. Serial No. 126,293. 1 Claim. (Cl. 101—415.)



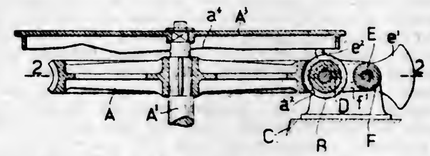
In a device of the kind described, a head member having a vertical wall provided with an opening, a prong member extending from said head member and adapted to be inserted beneath a tympan sheet, parallel flat arms extending from the head member in the same direction as the prong member and normally spaced apart in a predetermined relation but movable toward each other under pressure, and a tongue member slidable above and to different positions along said arms and having turned-under hook portions engaging the edges of and beneath the arms when the arms are in their normally spaced relation, said arms being movable toward each other under pressure a sufficient distance to permit of the engagement of the turned-under hooks with the edges and under sides of the arms, or the release of the hooks from such engagement, said tongue member being located intermediate the arms and the spaces between the arms and the tongue being wider than the length of the hooks, said arms at their free ends having downwardly turned side flanges on their outer edges serving as finger pieces to move the arms toward each other and also acting as stops to prevent the hooks from sliding off the ends of the arms.

1,385,638. SUPPORTING-BRACKET. CHARLES E. MILLER, Pittsburgh, Pa. Filed Jan. 25, 1918. Serial No. 213,806. 13 Claims. (Cl. 173—321.)



2. A support member slotted to receive the head portion of a screw, a screw the head of which lies within said slot and is clenched to said member, and a member secured to one end of the support member and provided with a hole through which said screw projects.

1,385,639. TESTING DEVICE FOR TRANSMISSION-LINE INSULATORS. FRANK MOORE, Los Angeles, Calif. Filed Mar. 21, 1919. Serial No. 284,155. 10 Claims. (Cl. 175—183.)

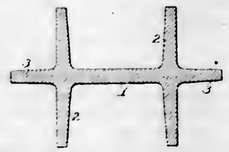


1. A testing device for transmission line insulators, including a carriage constructed to travel along a transmission line, testing fingers carried by the carriage and movable into and out of operative engagement with the insulators, and an indicator connected with the testing fingers whereby current leakage at the insulators may be detected.

1,385,640. LUGGAGE-CARRIER. DANIEL P. O'KEEFE, Los Angeles, Calif. Filed June 12, 1919. Serial No. 303,643. 2 Claims. (Cl. 224—29.)

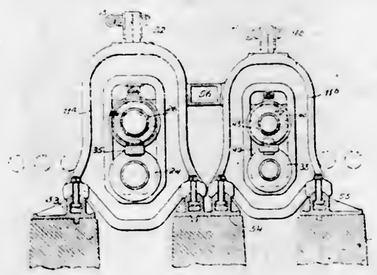
1. A luggage carrier, comprising two elongated members, means for clamping one of the same to a running-board or other support, both of said members being provided with longitudinal side flanges, two of said flanges being curved to slidably overlap the other two flanges, each of said members being provided at one end with an eye, a strap rove through said eyes and overlying said members, the upper member being provided at the end opposite the eye of that member with a stop, the lower member being provided with a stop remote from the eye of said lower member and adapted to co-act with said first named stop of said upper member, said eye of said lower member lying initially substantially within the longitudinal plane of said lower member whereby said members may be assembled together, said eye of said lower member being thereafter directed upwardly into position to engage with said stop upon the upper member; whereby, due to the co-action of said stops and said eye upon said lower member, said members are limited as to lengthwise relative movement.

1,385,641. WORM-GEAR. WILHELM POHL, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,387. 6 Claims. (Cl. 74—36.)



1. Worm-gearing having means for preventing irregularities in the angular movement of the worm-wheel, comprising means for varying the movement of the worm to compensate for inequalities in pitch of the gear teeth.

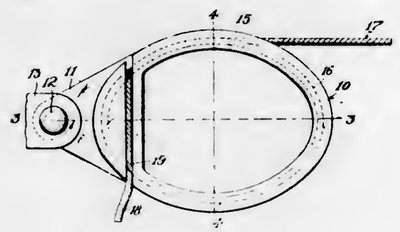
1,385,642. GAME OR TOY. LOUISE K. RESTEIN, Philadelphia, Pa. Filed Nov. 1, 1920. Serial No. 420,864. 2 Claims. (Cl. 46—69.)



1. A toy or game apparatus comprising the combination of a straight shaft having at each end a headed pin and a cupped portion, and rubber balls having cavities conforming to and receiving the headed pins, substantially as described.

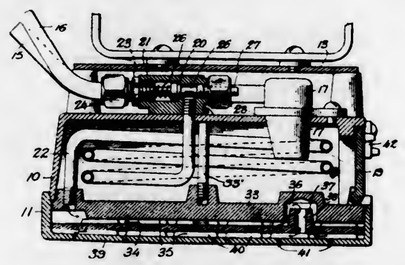
1,385,643. ROLLED METAL REINFORCEMENT FOR CONCRETE POLES AND PILES. ALVIN L. ROBERTS, Philadelphia, Pa. Filed Nov. 25, 1919. Serial No. 340,573. 1 Claim. (Cl. 72—109.)

A rolled metal shape composed of a web having parallel faces, side members integral with the edges of the web and tapered from the web outwardly, being thicker at their points of juncture with the web than at their free edges and a tapering rib on each side member and in the plane of the web, the web, side members and ribs being of substantially the same thickness at their meeting points.



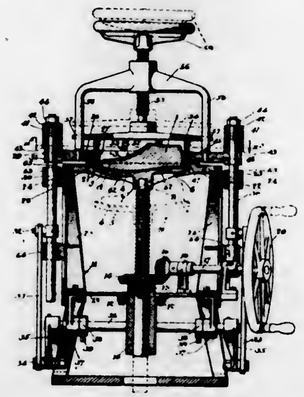
1,385,644. UNIVERSAL MILL. ALVIN L. ROBERTS, Philadelphia, Pa. Filed Jan. 15, 1920. Serial No. 351,630. 2 Claims. (Cl. 80—34.)

1. In a mill for rolling beams, columns and the like, the combination of a preliminary or roughing mill, con-



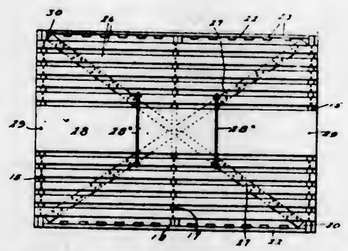
sisting of one stand with two main horizontal rolls placed one above the other and so connected that each has an equal vertical adjustment toward or away from each other and vertical side rolls with doubly inclined faces, placed at opposite ends and in a plane passing between the main horizontal rolls, and their axes all in the same vertical plane; and a finishing mill, consisting of two stands of rolls, the first or main finishing mill having two main horizontal rolls placed one above the other, and one having a tapered collar at one end; vertical rolls placed at opposite ends and between the main horizontal rolls, one of said side rolls provided with a tapered or conical portion to coact with the conical portion on the horizontal roll; the second or supplementary finishing mill having two main horizontal rolls placed one above the other roll and having projecting shoulder or collar at one side of the central portion, with vertical side rolls placed at opposite ends and between the main horizontal rolls and adapted by their circumferential outline to produce the required shape of a rolled beam or column.

1,385,645. CABLE OR ROPE CONNECTOR OR ANCHOR. JOHN HENRY ROSEMEYER, Elmira, Idaho. Filed Dec. 9, 1920. Serial No. 429,414. 2 Claims. (Cl. 24—129.)



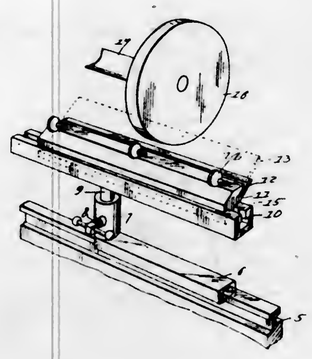
1. A cable hitch comprising an integral one piece body having a single peripheral and continuous groove and also having a transverse surface groove thereacross whose ends communicate with spaced portions of the peripheral groove, whereby the free end of a cable traversing the transverse groove will be gripped at opposite ends of the said groove by the coil of a cable disposed completely around in the peripheral groove.

1,385,646. SADIRON. NATHAN RUBENSTEIN, New York, N. Y. Filed Mar. 30, 1920. Serial No. 369,910. 4 Claims. (Cl. 68—26.)



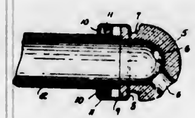
2. In a sad iron, the combination of a hollow iron comprising a perforated bottom section and an upper section having a handle, a plate in the bottom section and having a steam passage, ribs adapted to provide spaces above and below said plate, a second plate above the first, a water trap between the two plates, a water pipe entering the upper section as a coil and terminating below the second plate, a fuel burner in the upper section, a normally closed valve in the water pipe, and a lever adjacent the handle to open the valve.

1,385,647. SHOE-MACHINE. SAMUEL STRAUSS, Los Angeles, Calif., assignor to Los Angeles Trust and Savings Bank, trustee, Los Angeles, Calif., a Corporation of California. Filed July 22, 1918, Serial No. 246,146. Renewed Dec. 20, 1920. Serial No. 432,139. 13 Claims. (Cl. 12—1.)



1. A shoe machine comprising a platen, a last adapted to be positioned on a sole resting on the platen, a collar, means to hold a piece of leather on the collar, and means to produce relative movement of the collar and platen toward one another to stretch the leather over the last.

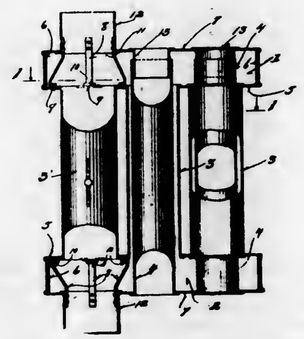
1,385,648. POULTRY-COOP. JAMES G. SHERIDAN, Parnell, Iowa. Filed June 12, 1920. Serial No. 388,572. 2 Claims. (Cl. 217—36.)



1. A shipping coop for poultry comprising a bottom, end walls secured upon the bottom, a partition secured upon the bottom at the transverse center thereof, said partition and end walls being all of the same height and being formed of top and bottom bars and vertical slats secured upon the inner faces thereof, corner posts triangular in cross section to which the bars of the ends are secured, side members secured upon the edges of the bottom and connected at their ends with said corner posts, said side members being formed of upper and lower bars and vertical slats secured thereto, and a cover secured upon said end and partition members, said cover being formed of slats and being provided with openings closed by a movable door, and diagonal braces secured to the cover and abutting against said posts.

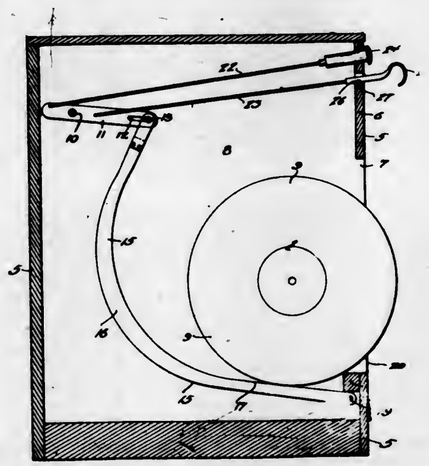
1,385,649. GRINDING ATTACHMENT FOR LATHES. GEORGE M. SHERMAN, Tahlequah, Okla. Filed Sept. 28, 1920. Serial No. 413,255. 2 Claims. (Cl. 51—216.)

1. A grinding attachment for machines including a lathe bed plate, a guiding element formed on the bed plate, a base mounted to move on the guiding element, a hollow boss on the base, a stationary guide having a groove and having a pivot pin positioned for adjustment within the hollow boss, means for holding the pin in its positions of adjustment, a work clamp having a T-head fitted in the groove to permit the work clamp to be adjusted longitudinally of the stationary guide, said work clamp having a diagonally disposed seat, and clamping means for contacting with the blade positioned in the seat to hold the same against movement.



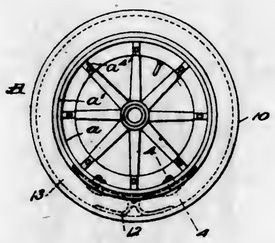
1,385,650. TERMINAL-FITTING FOR ELECTRICAL INSTALLATIONS. WHEELER H. VIBBER, New London, Conn., assignor of one-half to The Gillette-Vibber Co., New London, Conn., a Corporation. Filed Aug. 9, 1920. Serial No. 402,263. 2 Claims. (Cl. 247—6.)

1. A terminal fitting for electrical installation, having an insulating-head formed with a peripheral groove, a nut adapted to be mounted upon the threaded end of a conduit-pipe, and a light sheet-metal mounting-band having one end turned into the said peripheral groove of the insulating-head, and its other end turned over upon the said nut and adapted to be compressed thereupon for its non-rotatable connection therewith.



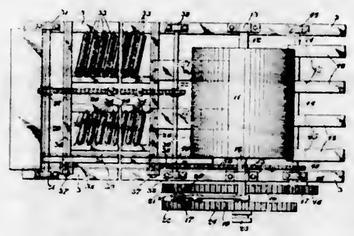
1,385,651. AIR-HEATER. EZRA T. WHITING, Green Lake, Wis. Filed Mar. 1, 1920. Serial No. 362,599. 3 Claims. (Cl. 257—170.)

1. In a heater, end heads, each of said heads having a removable cover, an outer tubular member connecting the heads to circulate fluid from one to the other, a supply member entering one of the heads, an exhaust member connected with the other head, and an inner tubular member extending through the outer tubular member and opening through each of the heads, said inner tubular



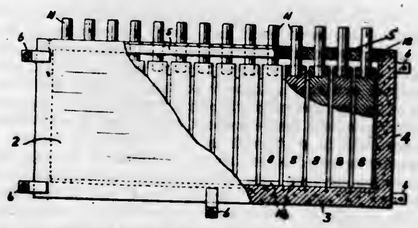
member being separable into two sections, one section being secured to each cover and removable therewith.

1,385,652. TALKING-MACHINE-RECORD-DISPENSING APPARATUS. GEORGE J. WILLIAMS, Camden, N. J., assignor of one-half to William T. Vaughan, Philadelphia, Pa. Filed Aug. 18, 1920. Serial No. 404,303. 2 Claims. (Cl. 211—16.)



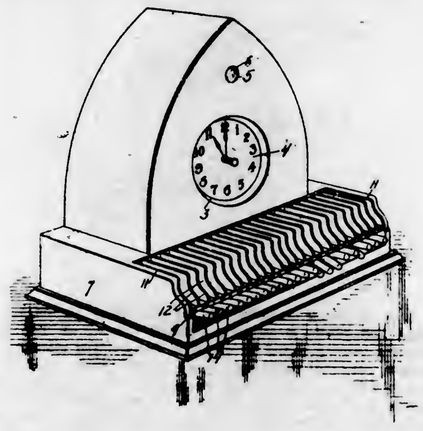
1. The combination of a record cabinet including means providing a compartment and having an opening leading outwardly from said compartment; a cradle support pivotally mounted at its lower forward portion in said compartment and having its rear portion, opposite said opening, extending upwardly whereby a record can be supported edgewise on said cradle support and a part of said cradle support will be positioned to the rear of said record; a pivotally mounted lever; means providing a pin and slot connection between said lever and the upper portion of the rear of said cradle support; and means extending to the outside of said cabinet and attached to said lever whereby said lever can be freely swung on its pivot to raise said support on its pivot to cause said record to roll outwardly on the lower portion of said cradle support.

1,385,653. TIRE CONSTRUCTION. OTTAVIO ZANCAN, New York. N. Y. Filed Apr. 15, 1920. Serial No. 374,035. (Cl. 152—13.)



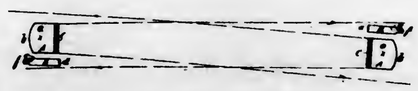
5. An anchoring member for the ends of inner tubes comprising a member of resilient material having a web portion and hollow portions extending from such web portion in opposite directions, said extended portions having external configurations to fit within the interior of a casing or shoe, the internal configurations of each hollow portion being adapted to produce a pocket to receive and anchor the inflated and closed end of a tube.

1,385,654. PRINTING-MACHINE. WILLIAM M. BACON, Chicago, Ill., assignor to Enameled Steel Sign Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1920. Serial No. 369,460. 10 Claims. (Cl. 271—52.)



1. In a printing machine, including a main frame, a printing cylinder revolubly mounted above the upper surface of the main frame, a platen located below the upper surface of the main frame, feeding mechanism comprising a series of feed rollers carried in the main frame for supporting flat sheets to be fed between said printing cylinder and said platen, a belt having contact members thereon for moving said sheets on said rollers, and a guide for laterally alining the sheets so that they will be received between the printing cylinder and the platen at a predetermined lateral point.

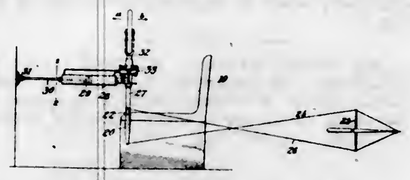
1,385,655. ELECTROLYTIC CELL. GERVAIS BAILLIO, Philadelphia, Pa. Filed Oct. 25, 1920. Serial No. 419,223. 9 Claims. (Cl. 204—5.)



1. An electrolytic cell comprising a body forming portion and abutting side members, a cathode in each side member, a sheet of porous material interposed between the abutting faces of the body and each side member, means for clamping the side members against the body, and means for positioning an anode in the body portion between the cathodes.

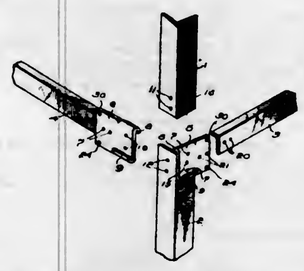
1,385,656. MEMORY-CLOCK. HARRY BATES, New York, N. Y. Filed Mar. 2, 1918. Serial No. 220,098. 2 Claims. (Cl. 161—5.)

1. In an annunciator clock, a clock mechanism provided with a central hand driving shaft, an arm of insulating material mounted upon said shaft, an annular conductor surrounding said shaft and insulated therefrom, a plurality of binding posts parallel with said shaft and spaced concentric with said shaft at the end of said arm and provided with pointed ends toward said arm and means for longitudinally adjusting said posts, a spring bridge wiping said annular conductor and affixed to said arm at substantially a third the radial distance to said posts, the bridge having a radial spring extending from said affixing point, the extension brushing said points on said posts.



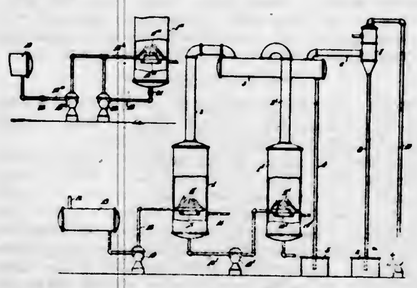
1,385,657. METHOD OF AND APPARATUS FOR UTILIZATION OF OBSERVABLE RADIATIONS. LOUIS BELL and NORMAN MARSHALL, West Newton, Mass. Filed Mar. 4, 1918. Serial No. 220,329. 12 Claims. (Cl. 250—8.)

10. A method of utilizing invisible light rays for signaling or the like, consisting in forming a directed beam of rays of from 400 $\mu\mu$ to 350 $\mu\mu$ wave lengths and in focusing said rays for observation on a fluorescent medium.



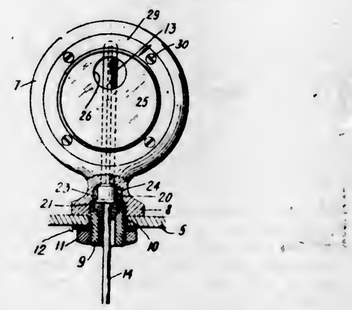
1,385,658. CONTROL FOR AERIAL MACHINES. ARTHUR F. BLASIAR, Guilford, N. Y., assignor, by mesne assignments, of forty-nine per cent. to William Bohleber, New York, N. Y. Filed Apr. 7, 1916. Serial No. 89,517. 25 Claims. (Cl. 244—29.)

7. A control for flying machines comprising a motor power actuating means in combination with means connected to a part of the machine to be controlled and adapted to be actuated by the actuating means, manually movable means carried by said actuated means for controlling



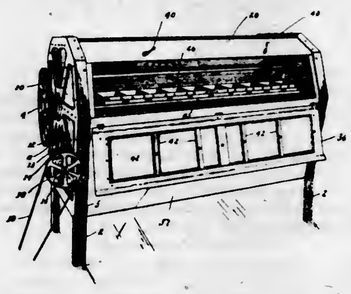
the motor power actuating means, and means on said manual means for operating said actuated means upon the failure of operation of the motor power means.

1,385,659. DERRICK-FITTING. RICHARD RALPH BLOSS and WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Oct. 2, 1920. Serial No. 414,240. 2 Claims. (Cl. 189—13.)



1. A derrick fitting comprising a pair of leg sections and a pair of horizontal girths formed of angle iron, a plate secured to one end of one of said girths, said plate being provided with a portion projecting beyond the end of the girth, a plate carried by one end of one of said leg sections and projecting laterally therefrom, the other girth being adapted to be secured to said second plate, the ends of said leg sections being overlapped, and means for securing the overlapped ends to the projecting portion of said first plate.

1,385,660. DEODORIZATION OF OILS. JOHN W. BODMAN, Western Springs, and TRUMAN M. GODFREY, Chicago, Ill., assignors to William Garrigue & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 12, 1919. Serial No. 316,940. 8 Claims. (Cl. 87—12.)

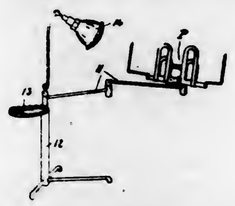


1. A process of deodorizing oil, which comprises bringing it, in the form of spray, only, into contact with a gaseous carrier, in a vacuum, at a temperature sufficient for the evaporation of odorous constituents of the oil, and continuously removing the unevaporated oil quickly to a place of considerably lower temperature than that in which the oil spray and carrier mingled.

1,385,661. INSTRUMENT. HARRISON HURLBERT BOYCE, Forest Hills, N. Y. Filed July 14, 1917. Serial No. 180,579. 5 Claims. (Cl. 285—161.)

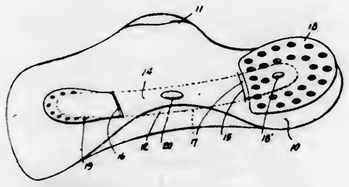
1. In an instrument of the character described, the combination of a transparent indicating tube of capillary bore, a flexible metal tube of capillary bore, the end of one of said tubes fitting within a recess formed in the end of the other tube, and a mass of binding material molded around and inclosing the joined ends of both tubes so as to firmly unite the ends of said tubes.

1,385,662. BAKING-OVEN. JAMES K. BRADLEY, Cleveland Heights, Ohio, assignor to The National System of Bakeries Co., Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 13, 1919. Serial No. 330,440. 3 Claims. (Cl. 107—59.)



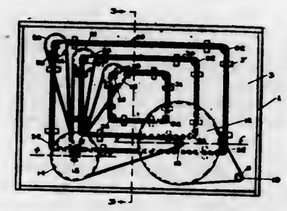
1. In a baking oven the combination of end members provided with inturned apertured flanges, and panels adapted to be removably mounted between said end members, said panels having abutting ends and extending portions adapted to overlap, such overlapping portions being removably bolted together, said panels having apertures in their ends adapted to be alined with such apertures in said flanges and bolts adapted to pass through such alined apertures to secure said panels to said end members.

1,385,663. BOOK-HOLDER. ERNST BRAUCHLI, St. Gallen, Switzerland. Filed Apr. 13, 1921. Serial No. 461,133. 2 Claims. (Cl. 45—61.)



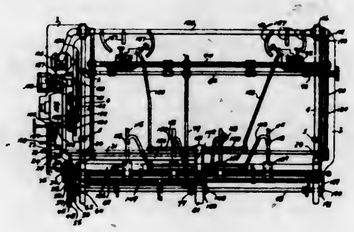
2. In a device of the character set forth, a carrier bar presenting a cylindrical middle portion and laterally extending guide arms, a double frame upstandingly fixed to

said carrier bar and comprising two pairs of front and rear loops, adapted to receive between them the opened-up cover boards of a book, a bridge piece connecting the two rear loops, arms slidingly arranged in said guide arms and eyes at the extremities of said slide arms, stop means on said slide arms designed for coöperation with said cylindrical carrier bar portion to limit the relative longitudinal displacement of said slide arms, bent-off



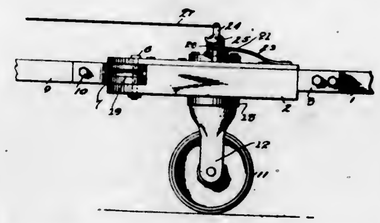
leaf holders supported in said slide arm eyes, and clamping means, comprising a slit tubular member snugly surrounding said cylindrical carrier bar portion, two apertured arms respectively laterally extending from the slit edges of said tubular member, a member adapted to be adjustably secured to a fixed object, and screw bolt and nut means coöperating with said apertured arms and said screw bolt in fixed connection with said adjustably securable member.

1,385,664. ORTHOPEDIC METATARSAL ARCH-SUPPORT. NUNZIO D. CALCULLI, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,774. 5 Claims. (Cl. 36—71.)



1. The herein described arch support, comprising a main portion, having a recess formed in its bottom surface, a spring extending longitudinally along said recess and projecting at its ends upward through the upper surface of the main portion and spaced therefrom, and a pair of plates attached to the respective ends of the spring and serving to resiliently support the heel and metatarsal portions of the foot.

1,385,665. ADVERTISING DEVICE. RONALD ST. CLAIR CARTER, Vancouver, British Columbia, Canada. Filed July 15, 1920. Serial No. 396,380. 2 Claims. (Cl. 40—96.)

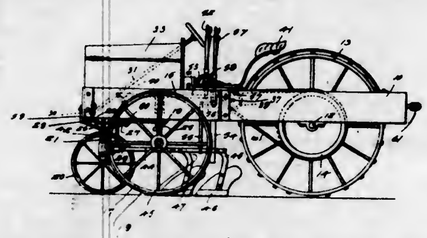


1. An advertising device comprising an upright rectangularly slotted partition, an endless belt arranged to travel behind and opposite said slot, and a plurality of advertising plates pivotally carried by said belt disposed in front of said partition, the point of pivotal connection being above the horisontal center line of the plates.

1,385,666. SHEET-FEEDING MACHINE. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed Oct. 9, 1918. Serial No. 257,517. 18 Claims. (Cl. 271—28.)

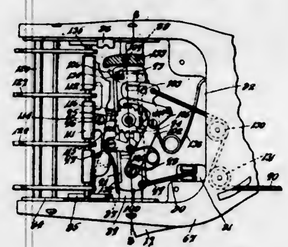
3. In a machine of the character described, a fixed bracket or support, a slide vertically reciprocable thereon, a guide bar operated by said slide, a rod reciprocable in said guide, a sheet engaging device mounted on said rod, and means for reciprocating said rod and moving said slide vertically.

1,385,667. STEERING MECHANISM FOR TRAILERS. GEORGE EDWARD CONRAD, Stillwater, Minn. Filed Aug. 18, 1920. Serial No. 404,394. 4 Claims. (Cl. 280—84.)



2. In combination with the guiding caster wheel of a trailer and its support, of a casing through which said support extends and having a bearing therein, a gear wheel rigidly mounted on said support, a pair of spaced apart rack bars on opposite sides of said gear wheel and in mesh therewith, guides within the casing coacting with said racks to maintain them and the gear wheel at all times in mesh, a tongue head pivotally mounted within the front of the casing and adapted to be connected with a power vehicle, and parallel links pivotally connecting the front ends of the rack bars with the tongue head.

1,385,668. PLOWING-TRACTOR. CLEVELAND CUNNINGHAM, Pittsburg, Kans. Filed Dec. 24, 1919. Serial No. 347,122. 3 Claims. (Cl. 180—25.)

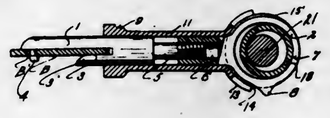


1. A plowing tractor of the character described comprising a main frame, a relatively large driving wheel disposed at the rear end of the main frame, an engine mounted upon the forward end of the frame in line with said driving wheel and operatively connected thereto to drive it, a steering wheel disposed at one forward corner of the main frame remote from that side of the frame upon which the engine is mounted, a steering wheel disposed on the other side of the main frame rearward of the first named wheel and of relatively large size, both of said steering wheels being mounted for rotative steering

movement and having arms projecting from the spindles thereof, a transversely extending steering rack, a steering wheel, a shaft having a pinion operatively engaging said

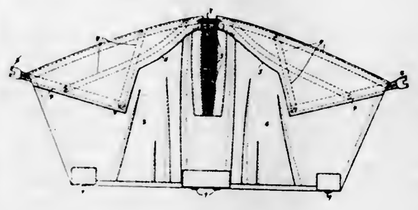
rack whereby to shift it laterally, and operative connections between the ends of said rack and the arms of the wheel spindles whereby to positively and coincidently shift said wheels for steering movement.

1,385,669. ARTIFICIAL LIMB. OTTO LE GRAND DILWORTH, Hartford, Conn. Filed July 22, 1919. Serial No. 312,571. 48 Claims. (Cl. 3—12.)



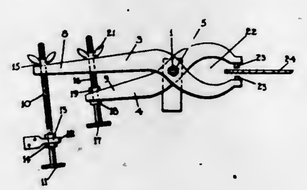
1. An artificial limb including a hand, fingers attached to the hand for bending movement, means for effecting bending movement of the fingers, mechanism movable independently of the bending means for locking the fingers in a bent position, and means operated always in one direction for effecting locking and unlocking movement, of said locking mechanism.

1,385,670. DISPLAY-STAND. WILLIAM MANSON DOCKER and EDWARD DOCKER, Kamloops, British Columbia, Canada. Filed Dec. 29, 1920. Serial No. 433,903. 3 Claims. (Cl. 211—24.)



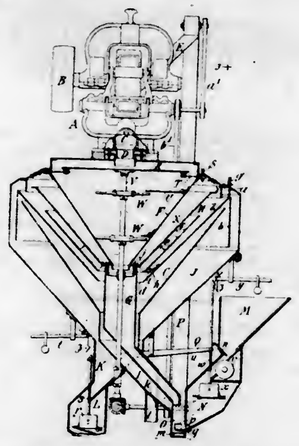
1. A display stand comprising a card formed to represent a shirt front and provided with means whereby a tie may be supported thereon to present a knotted appearance without knotting, and means for supporting a collar on said stand whereby the collar and tie are displayed as on the person.

1,385,671. SAW-HANDLE. JESS DRAGON, Enaville, Idaho, assignor of one-half to William A. Boro, Enaville, Idaho. Filed Jan. 18, 1921. Serial No. 438,102. 3 Claims. (Cl. 145—111.)



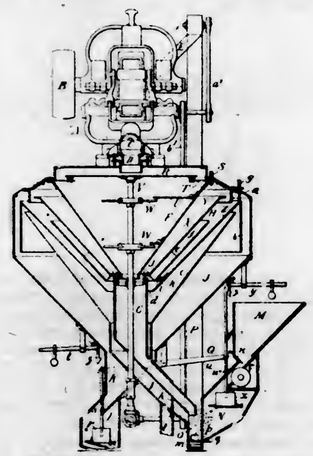
3. The combination with a saw blade, a hollow bracket having a grooved blade head, a draw bolt within the bracket coupled to the blade, a handle-head on the bracket, and an open head on the draw bolt, of a rotatable spindle having an eccentric portion in said open head and adapted to frictionally engage said handle head, a threaded extension on said eccentric portion, and a handle having a ferrule threaded on said extension, for the purpose described.

1,385,672. BRASSIÈRE. MARY DRESBACH, New Haven, Conn. Filed Dec. 6, 1920. Serial No. 428,507. 3 Claims. (Cl. 2—73.)



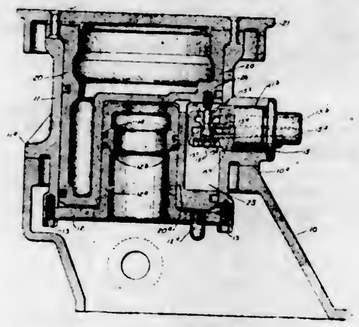
1. A brassière provided at opposite sides with means for attachment to the sides of the corset combined with triangular metal frames arranged at each side of the center the inner ends of the frames connected by a coil spring.

1,385,673. SAW-GUIDE. LAWSON F. FAULKNER, Aleza Lake, British Columbia, Canada. Filed Sept. 7, 1920. Serial No. 408,674. 1 Claim. (Cl. 193—165.)



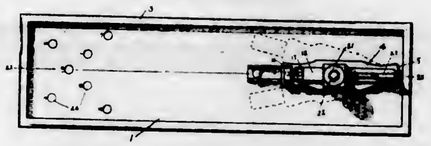
A saw guide comprising a vertical stud, a pair of jaw members pivotally mounted on said stud adapted to have the jaw portions thereof disposed on each side of the saw blade, the rear end of one member being forked and of less length than the rear end of the other member, a rigidly secured forked bracket, a screw passed rotatably through said forked bracket threaded into the rear end of the longer member provided with fixed collars arranged on the opposite sides of the fork, a screw passed rotatably through the fork of the shorter member threaded into the longer one provided with fixed collars arranged on the opposite sides of the fork, and means for locking said screws against movement.

1,385,674. METHOD AND APPARATUS FOR TREATING PULVERIZED MATERIAL. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Sept. 25, 1912, Serial No. 722,233. Renewed Aug. 15, 1918. Serial No. 250,079. 22 Claims. (Cl. 83—11.)



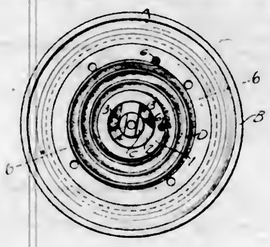
6. In combination, means affording an endless path for material, means for feeding fresh material to said path, and means for returning coarse material to said path comprising a tubular member or spout having a lower outlet and having an upper inlet for said coarse material spaced above said outlet, and having intermediate of said lower outlet an upper inlet, a lateral gravity inlet communicating with said fresh feeding means, and having a wall opposite said lateral inlet for sustaining material descending through said member from said upper inlet against inflow of fresh feed through said lateral inlet.

1,385,675. APPARATUS FOR TREATING PULVERIZED MATERIAL. GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed Sept. 25, 1912, Serial No. 722,233. Divided and this application filed Aug. 17, 1918. Serial No. 250,279. 10 Claims. (Cl. 83—11.)



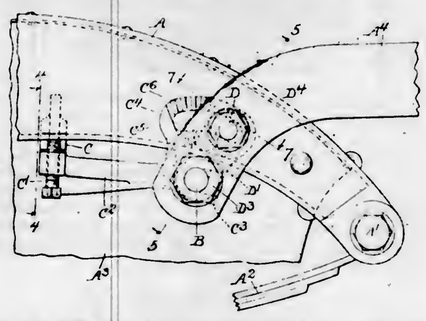
1. In combination, means for producing pulverized material comprising means affording an endless path affording an inlet for material to be pulverized and an outlet for pulverized material and comprising means having a chamber affording a complementary portion of said path and constituting a way for material in said path, means for causing material to circulate through said path, means for withdrawing fine material from said path, means for withdrawing medium material from said path, means for progressing the residue of partially pulverized material in such path and past said inlet, means for supplying through said inlet fresh material to be pulverized, and means for causing such residue of unpulverized material in said path to control inflow through said inlet of such fresh material.

1,385,676. MOLDING-MACHINE. PHILETUS W. GATES, Evanston, Ill., assignor to Mumford Molding Machine Company, a Corporation of New Jersey. Filed May 10, 1920. Serial No. 380,119. 4 Claims. (Cl. 121—14.)



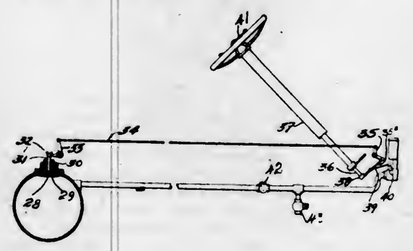
1. In a machine of the class described, a main cylinder provided with a central upstanding post, a plunger reciprocably mounted in said cylinder and having a cylindrical portion reciprocating on said post, said plunger being recessed, an automatic jolting valve projecting into said recess, and means to supply fluid under pressure to the interior of said cylindrical portion of said plunger, said supply being automatically controlled by said jolt valve.

1,385,677. GAME. HOWARD W. GILLETTE, Rochester, N. Y. Filed Sept. 11, 1920. Serial No. 409,706. 3 Claims. (Cl. 46—61.)



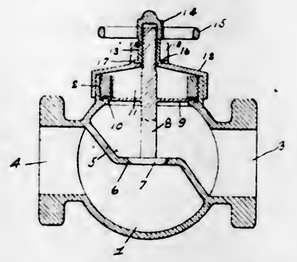
1. In a game, the combination of a board, an expelling mechanism mounted near one end of said board, said expelling mechanism comprising a block having an inclined channel extending from one end thereof and having a pocket formed at the top of the incline, a slide mounted to reciprocate over said block, a pusher mounted on the under side of said slide and projecting into the channel and pocket in said block, said slide having an opening therein, a stationary magazine mounted on top of said block, said slide being adapted to reciprocate between said block and said magazine and alternately move the opening of said slide into line with said magazine above said block and into line with the pocket in said block, missiles adapted to be transferred from said magazine to the pocket in said block by said slide when moving in one direction and adapted to be expelled from the pocket in said block by said pusher on the movement of said slide in the opposite direction.

1,385,678. TROLLEY. JOSEPH L. GUTWEILER and FREDERICK W. KUBLIN, St. Louis, Mo. Filed June 4, 1920. Serial No. 386,438. 20 Claims. (Cl. 191—59.1.)



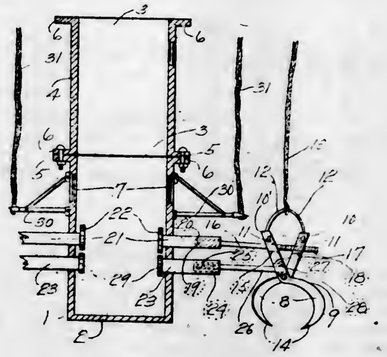
1. A trolley, comprising a harp or supporting member, and a wheel rotatably mounted in said harp in such a manner that it normally has a sliding contact with a trolley wire or conductor with which it coöperates but is capable of turning gradually about its axis when the trolley is in service so as to distribute the wear approximately uniformly over the entire surface of the wheel that bears against the trolley wire.

1,385,679. BUMPER-BRACKET. LEWIS P. HALLADAY, Decatur, Ill. Filed Mar. 28, 1921. Serial No. 456,333. 20 Claims. (Cl. 293—55)



6. A clamp for automobile bumpers and the like comprising a two-part supporting member, a pivot bolt upon which the two parts are rotated and a bumper supporting arm pivoted thereon, means for separately fastening each part to the frame, and means for holding the arm against rotation.

1,385,680. VAPORIZER. JOHN F. HAMER, Pukwana, S. D. Filed Aug. 16, 1920. Serial No. 403,987. 6 Claims. (Cl. 123—119)

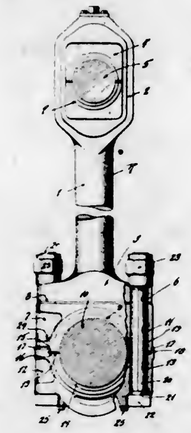


1. In a vaporizer, the combination of a tank containing liquid fuel, a carbureter, a conduit leading from the tank to the carbureter, a valve for permitting admission of air under atmospheric pressure to the tank in response to engine suction through the carbureter, a throttle for the carbureter, and means operatively connecting the throttle and valve for simultaneous control.

1,385,681. VALVE. CHARLES L. HAMMOND, Kokomo, Ind., assignor of one-third to William Seiler, Kokomo, Ind. Filed Sept. 27, 1919. Serial No. 326,890. 1 Claim. (Cl. 251—31.)

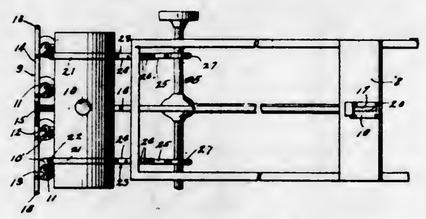
A valve structure comprising a body portion having a valve seat, a neck portion on said body having a rounded seat substantially circular in cross section, a metallic diaphragm entering said neck, a locking ring threaded into said neck above said diaphragm, the inner end face of said ring having a curved groove for bending parts of the diaphragm over said rounded seat and forming a non-leakable joint, a stem centrally of and integral with said diaphragm, and a valve integral with the inner end of said stem adapted to engage the seat in said body.

1,385,682. DIVING-TUBE. JOHN W. HAYNIE, St. Louis, Mo. Filed Feb. 12, 1921. Serial No. 444,383. 2 Claims. (Cl. 61—69.)



1. In combination with a diving tube and a pair of grappling hooks, two arms slidingly and rotatively extended through the tube walls, one of said arms having screw threaded connection with one shank of the hooks and the other arm having pivotal connection with the other shank.

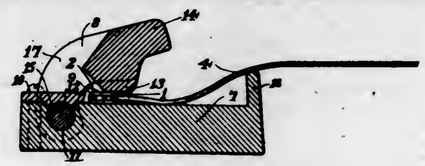
1,385,683. BEARING. REINHARD HILDEBRAND, Webster Groves, Mo. Filed June 23, 1920. Serial No. 391,175. 5 Claims. (Cl. 64—10.)



5. A bearing comprising a pair of bearing sections detachably connected together and having coöperating bear-

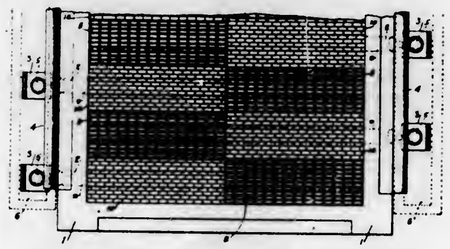
ing faces adapted to form a cylindrical space for the member to be rotated in the bearing, each of said bearing sections being provided with curved abutment shoulders at opposite sides of said cylindrical space, the curved abutment shoulders of one bearing section being engaged with the curved abutment shoulders of the other bearing

section, so as to interlock said bearing sections with each other, the centers of the curvature of said abutment shoulders being within said cylindrical space, and the curved abutment shoulders at one side of said cylindrical space being concentric with the abutment shoulders at the other side of said space.



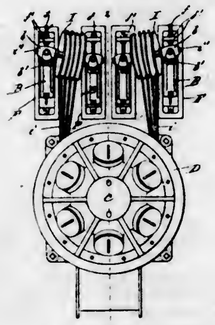
1,385,684. SPRINKLER ATTACHMENT FOR VEHICLES. ISRAEL G. HOWELL, Trenton, N. J., assignor of one-half to Alexander Perey, Trenton, N. J. Filed Aug. 15, 1917. Serial No. 186,372. 2 Claims. (Cl. 299—29.)

1. In a sprinkler attachment for vehicles, the combination with a supporting frame, a tank carried thereby and having a plurality of discharge nozzles, a control valve for each nozzle, and a crank on its stem; of a transverse bar pivoted on the several cranks and having handles at its extremities, a rod having connection with said bar, a foot lever connected with the front end of said rod, and a toothed plate with which said lever may be engaged in its various positions of adjustment.



1,385,685. BELT-FASTENING DEVICE. ISIDOR M. JACOBS, Kansas City, and WILLIAM CRAMER, St. Louis, Mo., assignors to Truck, Tractor, and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1920. Serial No. 428,364. 3 Claims. (Cl. 1—50.)

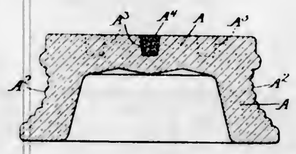
1. In a belt fastening device, the combination of an anvil, a bearing in said anvil, a top bearing, a movable upper die, depending flanges on said die, a shaft connecting said flanges, said shaft fitting in said bearing and



constituting a pivot, said top bearing provided with staple supporting teeth, means to secure staples in said teeth, and a belt supporting extension on said anvil.

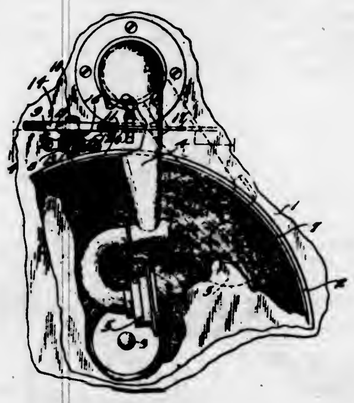
1,385,686. APPARATUS FOR BAKING MATERIAL, (UPDRAFT-KILN.) ITHAMAR M. JUSTICE and GLEN A. WILLIGMAN, Dayton, Ohio. Filed Nov. 22, 1920. Serial No. 425,592. 3 Claims. (Cl. 25—147.)

1. In combination, an open top kiln, ware therein, a platen on top of said ware arranged closer on one side than on the other, a plurality of oppositely located and staggered apertures in the bottom of the kiln for introducing fuel in combustion, burners adjacent said apertures and means of supplying air and fuel to said burners, whereby ware is treated in said kiln.



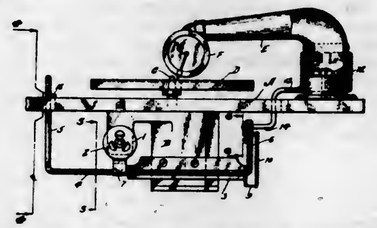
1,385,687. DRIVING MECHANISM FOR CRUSHERS. JOSEPH E. KENNEDY, New York, N. Y. Original application filed Oct. 23, 1917, Serial No. 198,023. Divided and this application filed Jan. 12, 1918. Serial No. 211,634. 3 Claims. (Cl. 74—21.)

1. A belt drive comprising a driven pulley mounted to rotate about a vertical axis formed with one or more rope



grooves, one or more drive ropes engaging said pulley, a horisontal drive shaft and a power pulley thereon formed with grooves corresponding to the driven pulley engaging with said endless drive rope or ropes, guide pulleys and shafts therefor intermediately installed between said power pulley and said rotatable sleeve pulley and engaging with said endless drive ropes, and means for effecting the universal adjustment of said intermediate shafts and guide pulleys, for the purpose set forth.

1,385,688. GLASS PAVEMENT-LIGHT. FREDERICK L. KEPPLER, New York, N. Y. Filed Feb. 5, 1917. Serial No. 146,641. 2 Claims. (Cl. 94—29.)

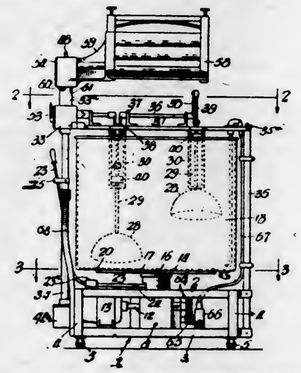


1. As a new article of manufacture, a tile unit comprising a glass body with a substantially flat upper surface, a depending rim about its edge, a plurality of projections from the lower surface of the tile, within the rim, shaped to form strengthening and light diffusing areas, and a series of abrasive plugs set in the upper surface of the tile above the projections, each plug lying well within the boundary of the projections over which it is placed.

1,385,689. STOP MECHANISM FOR TALKING-MACHINES. EDWIN O. KLEMM, Saginaw, Mich., assignor, by direct and mesne assignments, to Klemm Manufacturing Company, Saginaw, Mich. Filed Dec. 23, 1916. Serial No. 138,636. 19 Claims. (Cl. 192—116.)

5. In a device of the class described, the combination with a rotative record support and a traveling member movable relative thereto, of brake mechanism for the record support, and coöperating means between the traveling member and the brake mechanism to control the latter, comprising relatively movable parts respectively connected to the traveling member and brake mechanism, one of said parts being adjustably carried, and said parts being adapted to interlock at a certain portion of their relative movement, so that a fixed relation of the parts may be had during certain movement of the traveling member for presetting operation in respect to brake operation.

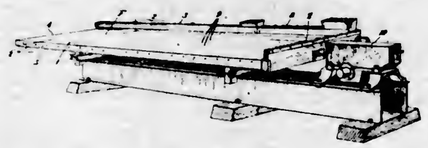
1,385,690. STOP MECHANISM FOR GRAPHOPHONES. EDWIN O. KLEMM, Dayton, Ohio, assignor to Klemm Manufacturing Company, Saginaw, Mich. Filed July 15, 1919. Serial No. 310,910. 13 Claims. (Cl. 192—116.)



3. Graphophone mechanism comprising in combination, a record carrier and a reproducer to traverse a record on said carrier, driving mechanism for the carrier, stop means for the driving mechanism, including a brake member, an arm carrying the reproducer, a trip on the reproducer arm movable with and independently thereof, and a detent connected with the brake member to control the operativeness thereof, said detent embodying an arm having a portion to engage and cause movement of the trip relatively to the arm, and a second portion to engage the trip and to be restrained from movement by the trip, and spring means to move the detent arm when the restraining influence of the trip is removed therefrom.

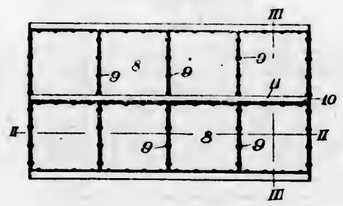
1,385,691. ARTICLE OF JEWELRY. AUGUST KNAUS, Philadelphia, Pa. Filed July 23, 1920. Serial No. 398,510. 3 Claims. (Cl. 63—29.)

1. In an article of jewelry of the character stated, a plate having therein an opening, and recesses in the wall thereof, and an interchangeable center composed of a frame and an ornament fixed thereto, and means on the inner side of said center adapted to connect the latter with said plate, said means consisting of members on said frame adapted to pass through said opening and enter said recesses.



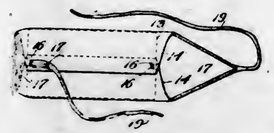
1,385,692. WASHING-MACHINE. CHARLES CALVERT LAMB, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,473. 11 Claims. (Cl. 74—14.)

11. In a gearing of the character described, the combination of a stand, an upright main operating shaft rota-



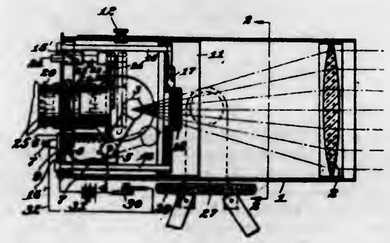
tably mounted on said stand, a rotary driven member supported in horizontal position above said stand and loose on the upper end of said shaft and adapted to support a tub, a motor on said stand, a power transmitting connection between said motor and said shaft, a clutch sleeve splined on said shaft below said rotary member and having a conical clutch surface adapted to be moved into frictional clutch engagement with the complementary conical clutch surface on said rotary member, an operating lever pivoted on said stand and connected with said sleeve for moving the same into and out of clutch engagement with said rotary member, and a weighted member on said lever for holding said clutch surfaces in contact when engaged.

1,385,693. CONCENTRATOR-TABLE. EDMUND T. LEDNUM, Denver, Colo., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 19, 1919. Serial No. 339,115. 9 Claims. (Cl. 83—88.)



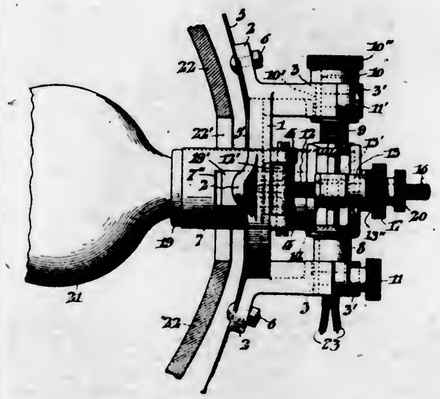
1. An ore concentrator table having, at least in part, a surface of pyroxylin-coated fabric.

1,385,694. METALLIC DOOR. EDWARD H. MCCLOUD, Columbus, Ohio, assignor, by mesne assignments, to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 31, 1918. Serial No. 247,553. 2 Claims. (Cl. 189—46.)



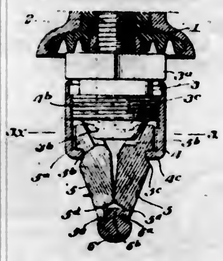
1. A door section comprising, in combination, a plurality of rows of flanged pan-like cells, a reinforcing bar located between and secured to the flanges of the cells, reinforcing bars secured to the outer flanges of the rows of cells, said reinforcing bars being of greater depth than the flanges of the cells.

1,385,695. CARRIER FOR LAUNDRY ARTICLES. DAVID D. MACCORMACK and MARY A. MACCORMACK, Boston, Mass. Filed Dec. 28, 1920. Serial No. 433,680. 2 Claims. (Cl. 150—52.)



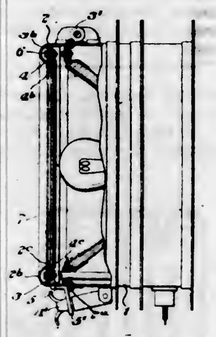
2. A washable carrier of the character stated, comprising a flexible sheet having a central portion on which articles may be assembled in a pile, and a marginal portion surrounding said central portion, and including two straight edged longitudinal flaps, adapted to be overlapped at the top of the pile, and two peaked transverse flaps, formed at their outer end portions to be grasped and drawn in opposite directions, toward the ends of the pile; and flexible tapes attached to the peaks of the transverse flaps, the outer attenuated portions of the transverse flaps being compressible and adapted to cross each other and form portions of confining ligatures, other portions of which are formed by said tapes.

1,385,696. METHOD AND APPARATUS FOR UTILIZATION OF OBSERVABLE RADIATIONS. NORMAN MARSHALL and LOUIS BELL, West Newton, Mass. Filed Feb. 1, 1919. Serial No. 274,518. 15 Claims. (Cl. 250—8.)



1. In signal apparatus of the class described, a combined projecting and receiving device comprising an objective and an eye piece, a source of radiant energy and a fluorescent medium both mounted in selective operative relation to said objective and a ray filter in inclusive association with said related parts.

1,385,697. LIGHT-FOCUSING MECHANISM. WALTER S. MAYER, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 9, 1918. Serial No. 253,278. 13 Claims. (Cl. 240—44.)

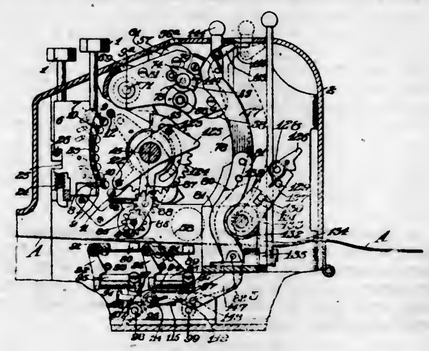


1. In a light focusing device, the combination with bearing means, of a holder, means to have an oscillatory and longitudinal movement relative to said bearing means whereby said holder is adapted to be moved angularly about an axis, and transversely along said axis and means for moving said holder in a line transverse to said axis.

1,385,698. SUSPENSION-CLAMP. WALTER S. MAYER, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1919. Serial No. 325,588. 7 Claims. (Cl. 191—43.)

4. In a clamp, the combination with a stud, of a nut screwed on said stud, a sleeve screwed on said nut, and a pair of jaws fulcrumed in said sleeve on opposite sides of said nut, said nut and jaws having coacting means whereby the latter are rocked oppositely.

1,385,699. LENS-HOLDER. WALTER S. MAYER, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 26, 1920. Serial No. 391,866. 5 Claims. (Cl. 240—41.)

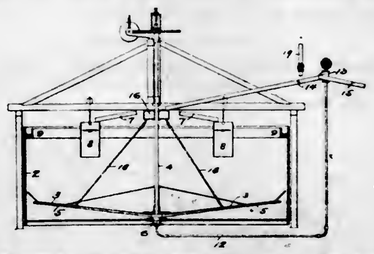


1. A lens holder comprising a frame having inwardly extending bearings, in combination with an internally channeled resilient ring having a wall of its channel supported by one of said bearings, and its part exterior to said channel clamped to the other of said bearings.

1,385,700. CALCULATING-MACHINE. ARTHUR S. MILINOWSKI, Brockport, N. Y. Filed Aug. 9, 1917. Serial No. 185,356. 25 Claims. (Cl. 235—60.)

1. In a calculating machine, the combination of a plurality of key controlled actuating devices, calculating devices, means for selectively placing any desired ones of said actuating devices and calculating devices into cooperative relation, and means for moving said calculating devices when in engagement with said actuating devices to cause them to perform calculations, the actuating devices remaining stationary during such calculations.

5. In a calculating machine, the combination with a plurality of key controlled actuating devices which are shiftable to any selected position, of a movable frame, calculating mechanism carried on the frame including transfer members which are engaged by the actuating devices during movement of the frame, item printing wheels controlled by the actuating devices, and total printing wheels controlled by said transfer members.

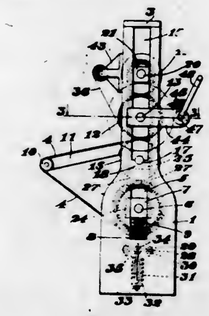


9. In a calculating machine, the combination of a traveling support, a plurality of key controlled actuating devices mounted on said support, item printing devices also mounted on said support and controlled by said actuating devices, transfer devices also controlled by the actuating devices, total printing devices controlled by the transfer members, and total indicating devices operated by said transfer devices.

12. In a calculating machine, the combination with a plurality of key controlled actuating devices, of a traveling support on which the actuating devices are shiftable, an oscillatory frame, calculating mechanism carried on the frame including transfer gears arranged on a holder which is movable on the frame, and means coöperating with said holder and acting to retain the gears in engagement with the actuating devices during movement of the frame in one direction and to disengage the gears from the actuating devices during movement of the frame in the opposite direction.

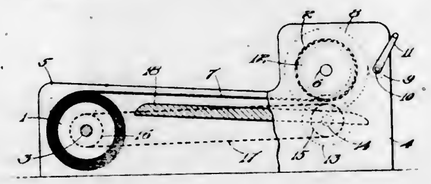
22. In a calculating machine, the combination with a series of actuating devices movable into any selected numerical position, of a locking portion carried on each actuating device, a universal locking stop normally holding the actuating device against movement, and means for releasing the actuating device to permit movement, the locking portion of any actuating device operating to move the locking stop out of the path of all the locking portions during the return of said actuating device to normal position.

1,385,701. PROCESS OF RECOVERING VALUABLE SOLUTION FROM MIXTURES. LOUIS D. MILLS, Redwood City, Calif. Filed Mar. 10, 1919. Serial No. 281,616. 11 Claims. (Cl. 23—31.)



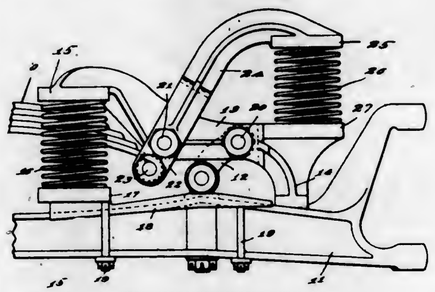
1. The process of replacing solution in a pulp with other liquid which consists in allowing the pulp to settle to form a thick pulp at the bottom, drawing off the thick pulp from the bottom, adding washing liquid to a portion of the withdrawn thick pulp and flowing it back into the settled thick pulp.

1,385,702. SETTING FOR PRECIOUS STONES. THOMAS MOUNTFORD, Newark, N. J. Filed Mar. 19, 1919. Serial No. 283,672. 2 Claims. (Cl. 63—26.)



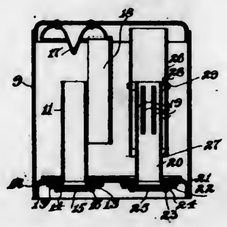
1. In a setting for precious stones, the combination of a bezel having a polygonal shape and recesses in its upper edge, situated at the apices of the angles, and a plurality of clamps secured together in spaced relation such that their lower ends will fit within said recesses, said lower ends being fitted within said recesses.

1,385,703. MANGLE. JAMES NORRIE, Quincy, Mass. Filed Jan. 4, 1921. Serial No. 434,953. 10 Claims. (Cl. 68—13.)



1. A mangle having two rotary rolls in frictional engagement with each other between which the article to be mangled is fed, a carrier web of sheet material on which the said article is carried during the mangling operation, said web having one end connected with one of said rolls in such manner that when the said roll is rotated in one direction the web and superposed article will be wound around the roll, and when after the winding in one direction the roll is rotated in the reverse direction, the said web and article will also be fed in the reverse direction, and a rotary takeup roll with which the other end of the web is connected and which gives out the web as the said first web-carrying roll winds up the web and which takes up the web as the said first web-carrying roll unwinds the web.

1,385,704. MANGLE. JAMES NORRIE, Quincy, Mass. Filed Feb. 28, 1921. Serial No. 448,327. 7 Claims. (Cl. 68—13.)

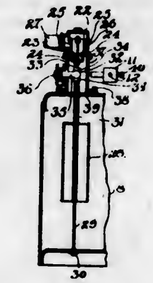


1. A mangle having a feed roll and a takeup roll parallel with each other, one in advance of the other, a carrier web of sheet material which pays off from the feed roll to the takeup roll, and carries the article to be mangled, winding it up with the web around the takeup roll, and means for positively rotating the two rolls simultaneously.

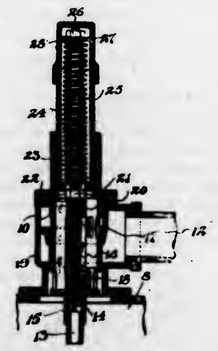
1,385,705. SHOCK-ABSORBER. LOUIE H. OBERREICH, Indianapolis, Ind. Filed July 18, 1919. Serial No. 311,864. 8 Claims. (Cl. 267—17.)

7. In combination with the main spring and axle of an automobile, a lever pivotally supported from said axle, a link connecting said lever to the main spring, a spring acting on said lever resiliently opposing the lever movement which occurs when the main spring and axle are pushed together, a stop for limiting the movement of said lever in the opposite direction, and a spring acting on said link to oppose the link turning which occurs upon rebound.

1,385,706. AIR-LIFT SYSTEM. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 7, 1916. Serial No. 124,400. 23 Claims. (Cl. 103—84.)



1. In an air-lift booster, a booster casing, inlet and discharge pipes therein, a vertically movable rod therein, guiding means therefor in said casing, a valve casing, a vent-valve on said rod guided by said valve casing, and a single float carried on said rod.

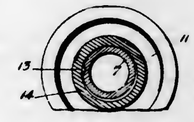


1,385,707. AIR-LIFT SYSTEM. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 10, 1916. Serial No. 124,892. 18 Claims. (Cl. 103—84.)

2. In combination, a booster casing, inlet and discharge pipes therein, means for maintaining a constant liquid level in said casing including a vent valve on said casing and a float connected to said vent valve, and means operable from the exterior of said casing for varying at will the buoyancy of said float.

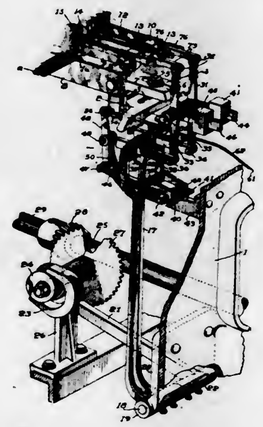
9. In an air-lift booster, a booster casing, an upstanding pressure fluid and liquid pipe therein, a concentrically disposed pressure fluid pipe, an umbrella top disposed concentrically about said pressure fluid pipe and adjacent the mouth of said first mentioned pipe, and a water discharge pipe in said casing oppositely disposed with respect to said pressure fluid and liquid pipe and having its receiving end disposed adjacent one end of said casing.

1,385,708. AIR-LIFT BOOSTER. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 6, 1916. Serial No. 135,386. 23 Claims. (Cl. 103—84.)



1. In an air lift system, in combination, a booster having a pressure regulating means responsive to the effects of pressure variations in the booster, and a resilient means for controlling the operation of said first named means.

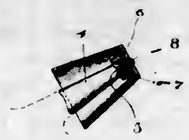
1,385,709. BOTTOM FOR BOTTLE-CRATES. LEE H. PAYNE, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,138. 2 Claims. (Cl. 217—22.)



1. In a bottle crate composed of pairs of opposed confining walls and partitions subdividing its inner space into compartments, a bottom structure providing bottoms for the respective compartments and comprising flexible flat metal load-bearing strips extending between and anchored to the opposed walls of one pair, with their lesser transverse dimension and flat faces presented in the direction of loading, and an intermediate sustaining bridge comprising a flat metal strip extending between and anchored to the opposed walls of the other pair, with its greater transverse dimension presented parallel to the direction of loading and having therethrough, in line with and substantially conforming to the section of the load-bearing strips, slots that maintain the spacing of said load-bearing strips and sustain them intermediately of their anchored ends, with freedom of rocking in the slots.

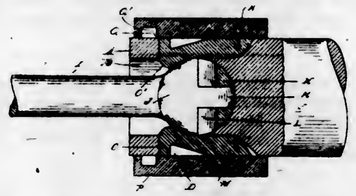
1,385,710. VEHICLE-WHEEL. HENRI DANIEL REY, Avarua, Island of Raratonga, New Zealand. Filed Feb. 5, 1920. Serial No. 356,538. 4 Claims. (Cl. 301—74.)

1. A wheel of the character specified, comprising a hub and a rim, and spokes between the hub and the rim, said spokes consisting of series oppositely arranged, the members of one series crossing those of the other between the hub and the rim, the rim and the hub having sockets for engagement by the ends of the spokes, the sockets at one end of the hub being carried by a collar feathered on the hub, and resilient means between the collar and the hub, and acting normally to force the collar outwardly.



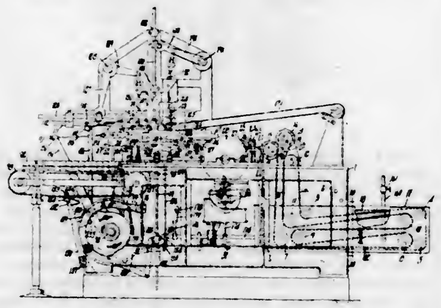
1,385,711. WARP STOP-MOTION FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 15, 1920. Serial No. 417,186. 12 Claims. (Cl. 139—92.)

1. In a warp stop motion for looms, the combination of a fixed and longitudinally movable toothed bar, a series of warp detectors which are hung upon and normally supported in raised position by the warp threads and constructed and arranged to lock the toothed bars together, an actuator, a rocker mounted on the actuator for movement therewith and for rocking movement thereon, connections between the rocker and movable toothed bar, means normally acting to hold the rocker from rocking movement while being moved with the actuator and permitting such rocking movement when the toothed bar is held from longitudinal movement by a warp detector dropped by a slack



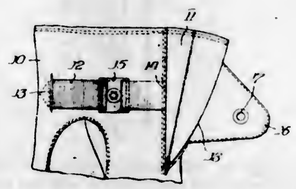
or broken warp thread, and means for stopping the loom when the rocker partakes of its rocking movement during movement of the actuator.

1,385,712. SAFETY OIL-CAN. JAMES DAVID RICHEY, Corpus Christi, Tex. Filed Sept. 8, 1920. Serial No. 409,013. 1 Claim. (Cl. 220—39.)



The combination with a receptacle having a discharge spout, of a frusto-conical one piece liquid container of a diameter approximately three times the diameter of the spout whereby the major portion of the spout is freely received within and protected by said container, and a cap threaded on said spout and having a top rigidly secured within the container to the bottom wall of the same, said container being exteriorly smooth and of a length to permit the same to be securely gripped when applying or removing said cap.

1,385,713. UNIVERSAL JOINT. DAVID ROBINSON, Jr., Detroit, Mich. Filed Mar. 26, 1920. Serial No. 369,133. 8 Claims. (Cl. 64—91.)

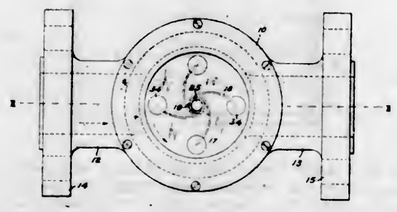


1. The combination with a revoluble member having an axial recess in one end thereof and a transverse cylindrical recess intersecting said axial recess, of a member formed of one piece having cylindrical portions engaging said transverse cylindrical recess and having a bearing in one side thereof concentric with an axis transverse to that of said cylindrical recess, and a second revoluble member insertible within said axial recess into engagement with the bearing in said cylindrical member.

1,385,714. CAN-LABELING MACHINE. GEORGE A. ROBINSON, Quincy, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a Corporation of Maine. Filed Sept. 25, 1919. Serial No. 326,371. 16 Claims. (Cl. 216—7.)

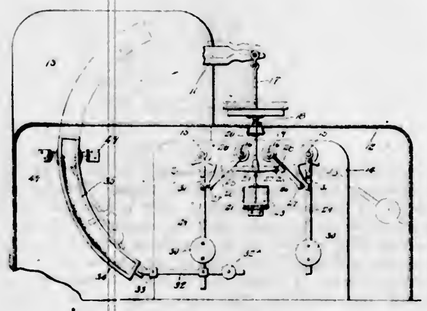
15. In a labeling machine, means for moistening and pasting a label, means for moving a label through the moistening and pasting instrumentalities to a position adjacent where it is adapted to be applied to the package, means for moving the label in the same plane with its former movement in a direction at right angles to its former path of movement, means for causing the label when moved laterally to be alined in a predetermined position, and means for applying the label to the package.

1,385,715. GLOVE. HUGH ROSS, Sheboygan, Wis. Filed Oct. 15, 1919. Serial No. 330,771. 4 Claims. (Cl. 2—9.)



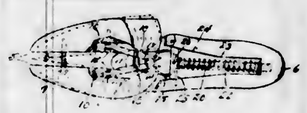
1. A glove including a body portion, a flexible gore set into said body portion at the wrist, a strap anchored at both ends to the body portion at the wrist, a fastening member adjustable on said strap, and a tab secured to the body portion adjacent one side of the gore and carrying a fastening member to coöperate with said other fastening member for fastening the glove snugly around the wrist.

1,385,716. PROCESS FOR TREATING CLAY. JOHN H. RYAN, Kalamazoo, Mich., assignor to Duncan R. Seaman, Chicago, Ill. Filed Apr. 7, 1921. Serial No. 459,365. 14 Claims. (Cl. 252.)



1. The process of treating clay consisting first, in breaking the same into small lumps and then drying the same in the presence of heat for the purpose of a preliminary oxidization, mixing the same with a surplus of water to settle out any grit, adding thereto ammonia to neutralize any acid in the clay, introducing the pulp into a pebble mill and acting upon the thick pulp by said pebble mill to grind the same and to thoroughly admix the ammonia therewith, next adding a bleaching agent, of one-half of one per cent. of the water content, and continuing the action of the pebble mill for a period of substantially two hours to fully admix the chemical therewith and secure its action, thereafter diluting the pulp to draw the same from the mill and subjecting the same to an agitator to entirely dissolve and remove the chemical, settling and decanting the water, withdrawing the pulp and filtering the same, and subjecting the thick pulp to a drying action to finish the product, all substantially as described for the purpose specified.

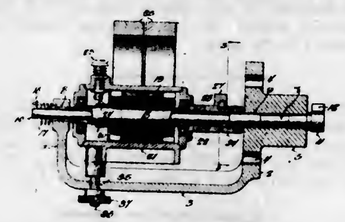
1,385,717. FLOW-INDICATOR. FRED V. SAMS, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 2, 1920. Serial No. 349,656. 9 Claims. (Cl. 116—117.)



1. A flow indicator, comprising a casing having a flow opening therethrough and a transparent window affording a view of the interior of the casing, and an indicating element within said casing comprising a rotary motor in the path of flow through the casing and having a plurality of vanes, at least one of said vanes being provided with a reduced extension having an indicating portion movable in close proximity to said transparent window to indicate the flow of fluid through said casing.

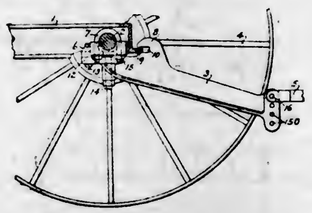
1,385,718. WEIGHT-INDICATOR FOR SCALES. HENRY C. SCHAPER, St. Louis, Mo., assignor to The General Automatic Scale Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 4, 1916. Serial No. 129,604. 4 Claims. (Cl. 265—62.)

1. The combination in a weighing scale having a beam, of a member depending from the free end of the beam, a pair of pivotally mounted levers adapted to be actuated by said depending member, pendulum weighted arms adapted to be actuated by said levers, a transparent member provided with a graduated scale, which member is carried by one of the pendulum weighted arms, and means for projecting the marks of the graduated scale onto a screen in enlarged form.



1,385,719. BOOT OR SHOE FORMER. ARTHUR SCHOSHUSEN, Pittsburg, Kans. Filed Aug. 13, 1919. Serial No. 317,388. 5 Claims. (Cl. 12—128.)

1. A shoe form comprising a sectional toe portion and a heel portion, the sections of said toe portion being separately and independently movable and both laterally and angularly adjustable to fit the toe portion of the shoe, and means connecting said toe and heel portions of the form including means for automatically and yieldingly separating said toe and heel portions while simultaneously expanding said toe sections.



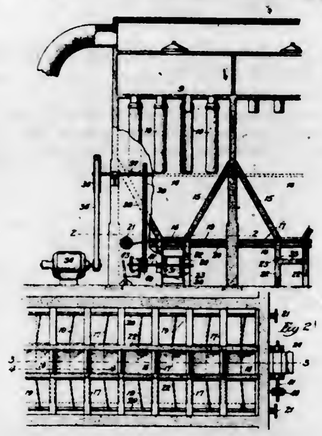
1,385,720. MAGNETO. FRANK H. SCHRYER, Wauwatosa, Wis. Filed Sept. 25, 1919. Serial No. 326,231. 4 Claims. (Cl. 123—149.)

1. In an electric generator, a frame, a rock shaft mounted in the frame, a field element, a conductor carrying element loosely mounted on said shaft, means for oscillating said conductor carrying element, a stationary electrode, a movable electrode carried by the shaft and normally engaged with the stationary electrode, coöperating clutch members on the shaft and conductor carrying

element, and a spring urging said shaft longitudinally and revolubly in one direction.

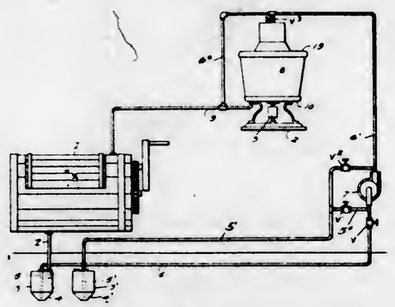
1,385,721. DRAWBAR. CHARLES EDWIN SEARCH, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 18, 1917. Serial No. 163,305. 4 Claims. (Cl. 213—67.)

1. In combination, suspension means comprising a frame having an elongated horizontal flange and a cylindrical element extending parallel to said flange, and a draw-bar embracing said cylindrical element and adjustably attachable thereto at different portions of its length, said draw-bar having a portion extending in close proximity above and below said flange and said flange serving to prevent vertical displacement of said draw-bar about said element.



1,385,722. NECK-SHAVING PATTERN OR GUIDE. WILLIAM T. SESSOMS, Chicago, Ill. Filed Sept. 3, 1920. Serial No. 408,051. 4 Claims. (Cl. 132—45.)

1. A neck shaving guide comprising a curved, flexible strip having a row of openings near each end, said open-

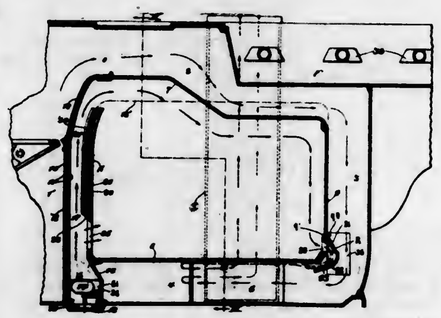


ings being spaced from one another at equal distances, and ear attaching members each having a pair of projections adapted to enter any of a plurality of pairs of openings for holding the ear attaching member rigidly with respect to the strip.

1,385,723. SMELTING MINERALS. FRANK W. SMITH, Chicago, Ill., assignor of one-fourth to John J. Glasheen, one-fourth to Richard J. Snellberger, and one-fourth to Wilbert J. Lewis, Chicago, Ill. Filed Aug. 15, 1919. Serial No. 317,653. 3 Claims. (Cl. 266—17.)

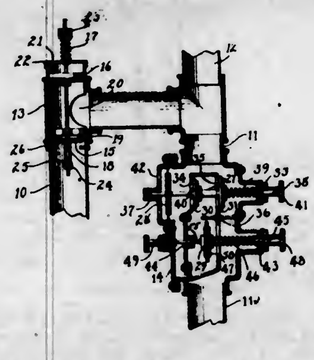
1. That improvement in smelting minerals which consists in filtering the gases from a blast-furnace, discharging the fume into a chamber, burning the fume in the chamber, discharging the burnt fume from the chamber before it has been cooled sufficiently to be handled by workmen and mechanically conveying it from beneath the chamber before it has so cooled, so that the filtering of the gases may be continued without waiting for the fume to be so cooled.

1,385,724. DRY-CLEANING SYSTEM. PAUL F. SMITH and JAMES A. LUKE, Salt Lake City, Utah. Filed June 12, 1920. Serial No. 388,497. 3 Claims. (Cl. 8—8.)



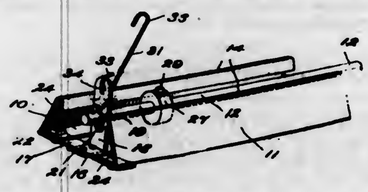
1. A closed dry cleaning system adapted to continuously circulate the cleansing liquid comprising in combination a dry cleaning machine, a receiving tank and a drain pipe from said machine to the tank for the dirt laden cleansing fluid, a pipe line from the tank and a pump in said line, a filtering device connected to the pump, and a supply pipe from said filter to the dry cleaning machine.

1,385,725. PANE-FASTENER. CHARLES J. SOLI, Racine, Wis. Filed Aug. 8, 1919. Serial No. 316,150. 1 Claim. (Cl. 20—56.4.)



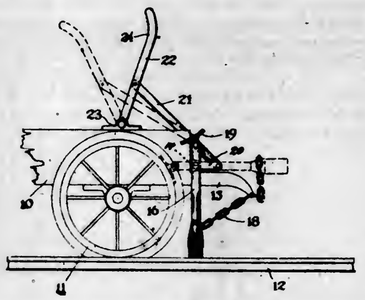
The combination of a frame having certain of its rails rabbeted to form shoulders facing in one direction and another of its rails rabbeted to form a shoulder facing in the opposite direction, said last named rail having a covering strip of sheet metal comprising a channel portion seated in said rabbet, the metal at one edge of the channel being extended to cover the shoulder formed by said rabbet, the metal at the other edge of the channel being bent upon itself to form a wall of double thickness for that side of the channel and being bent outwardly at the base of the wall, and a lip on the outer edge of said strip extending into the side of said rail.

1,385,726. COMBINED GAS AND COAL STOVE. ADOLPH A. SPECHT, Quincy, Ill., assignor to Gem City Stove Manufacturing Company, Quincy, Ill., a Corporation of Illinois. Filed Nov. 11, 1918. Serial No. 261,980. 4 Claims. (Cl. 126—36.)



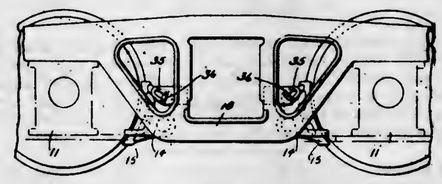
1. A combined gas and coal stove having a fire pot, an oven, a bottom flue under the bottom of the oven communicating with said fire pot, a vertical flue at one side of the oven, the upper corner of the oven at the top of said vertical flue being porvided with a main inlet for heating fluid, an outlet for the heating fluid being formed at the lower corner of the oven diagonally opposite to said main inlet, said bottom flue being in communication with said outlet, a burner compartment at the lower end of said vertical flue, a burner in said burner compartment, said burner being lower than the adjacent lower corner of the oven, the side of the oven adjacent to said vertical flue being provided with an auxiliary heating fluid inlet adjacent to the bottom of the oven, said vertical flue being extended from said burner compartment to the main inlet at said upper corner of the oven and said auxiliary inlet being in free communication with said vertical flue at a point above the burner, so as to provide for the admission into the oven of a portion of the heating fluid rising in the said vertical flue, and said vertical flue being contracted above said auxiliary inlet to retard the fluid flowing to said main inlet.

1,385,727. REGULATING MECHANISM FOR PNEUMATIC CARRIER SYSTEMS. JOSEPH J. STOETZEL, Chicago, Ill., assignor of one-fourth to Paul F. Clausen and one-fourth to Frank Novak, Chicago, Ill. Filed Feb. 26, 1920. Serial No. 361,506. 16 Claims. (Cl. 243—4.)



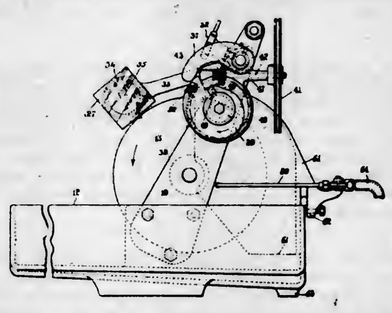
1. In a regulator for pneumatic carrier systems, the combination of separate pipes providing communication between a common header leading to the system and separate sources of power, valve mechanism located in each of said pipes between said header and the respective source of power and adapted for controlling such communication, separate means located within said pipes and directly connected to the respective valve mechanisms and independently actuatable automatically by variations in the system pressure for shifting the respective valve mechanisms, and other means for regulating said first-mentioned means, all being arranged so that the power required for the normal operation of the system is obtained from one source and power for abnormal operation of the system is obtained from the other source.

1,385,728. BELT-CONTROLLER. WILLIAM E. STROMBERG and EDWARD H. SCHMICKING, New York, N. Y.; said Stromberg assignor to said Schmicking. Filed Mar. 26, 1920. Serial No. 369,138. 12 Claims. (Cl. 74—51.)



4. In combination, a belt or web and a controller, and tie-pieces at each end of said controller for suspending the same, said tie-pieces having their points of connection to said controller farther apart than their points of connection at their other ends, whereby the ends of said controller will move in opposite directions with respect to the plane of the belt, when it is moved to one side or the other by said belt, said controller comprising a guide having projections thereon adapted to depress the portions of the belt in the vicinity thereof.

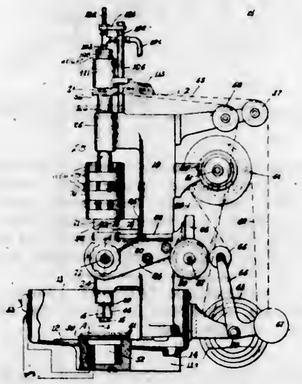
1,385,729. SAFETY BRUSH-BRAKE FOR RAILROAD MOTOR-CARS. SHERIDAN C. TANNER, Relay, Md. Filed Apr. 10, 1920. Serial No. 372,840. 5 Claims. (Cl. 188—33.)



1. The combination with the wheels, of vertically swinging bars forwardly thereof, having track clearing means at their lower ends, means for swinging said arms to horizontal positions, and wheel engaging brake members carried by the opposite ends of the arms, and movable to engage the wheels in the horizontal positions of the arms.

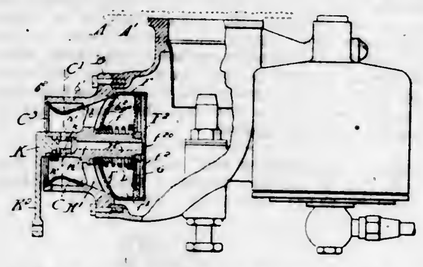
1,385,730. BRAKE-BEAM SUPPORT. JOHN J. TATUM, Baltimore, Md. Filed Mar. 8, 1919. Serial No. 281,487. 9 Claims. (Cl. 188—212.)

1. The combination with a car truck frame and the brake beams associated therewith, of brackets projecting inwardly from the wheel pieces of the truck frame, which brackets are provided with openings adapted to receive brake heads, said brackets being provided with inclined slots, and bearing members carried by said brake heads and loosely arranged in said slots whereby the brake heads are free to move toward the wheels when the brakes are applied and to move away from the wheels by gravity when the brakes are released.



1,385,731. APPARATUS FOR SAWING GLASS. WILLIAM TAYLOR, Leicester, England. Filed Apr. 24, 1916. Serial No. 93,270. 43 Claims. (Cl. 125—13.)

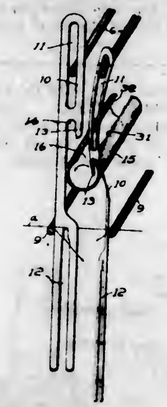
1. Apparatus for sawing glass, which comprises in combination a saw, a work holder for supporting the glass



to be sawed, means by which one of said members tends to move to cause a relative approaching movement between the glass and the saw with a force sufficient to effect the approaching movement at the desired rate when the saw is in proper working condition but not sufficient to damage the saw or the glass when the saw is blunt, and means for limiting such approaching movement to a predetermined rate slightly less than that which would normally overload the saw.

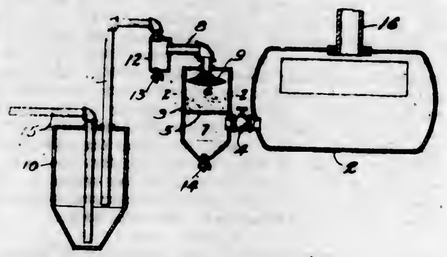
1,385,732. GLASS-CUTTING APPARATUS. WILLIAM TAYLOR, Leicester, England. Filed Apr. 24, 1916. Serial No. 93,271. 29 Claims. (Cl. 125—20.)

25. Apparatus for sawing, comprising a rotary spindle, a quill having bearings in which the spindle is mounted, a saw carried by the spindle, the quill and spindle being adapted to move downward to feed the saw through the material being cut, and means coacting with said spindle and quill for damping the vibrations of said spindle.



1,385,733. MIXTURE-GOVERNING DEVICE FOR INTERNAL-COMBUSTION ENGINES. PERCIVAL S. TICE, Chicago, Ill. Filed July 17, 1919. Serial No. 311,484. 4 Claims. (Cl. 137—153.)

2. In the construction defined in claim 1, the chamber being formed in the body of the valve, the piston-wise operating member being fixed in position; whereby the relative piston-wise operation is effected by movement of the chamber on said fixed member; a stem rigid with the intake passage wall on which the valve moves, and which carries said fixed, piston-wise operating member, the conduit for the venturi throat of the chamber being formed in said stem.



1,385,734. WARP STOP-MOTION FOR LOOMS. EUGENE L. TINKHAM, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 15, 1921. Serial No. 437,581. 9 Claims. (Cl. 139—92.)

1. In a warp stop motion for looms, the combination of a plurality of drop wires arranged in parallel rows and normally supported by the warp thread during weaving, a detector positioned between the rows of drop wires and cooperating with the drop wires of either row and having a detecting movement, each of the said drop wires

being provided with a detector embracing portion which embraces the detector and arrests its detecting movement when a drop wire of either row fails to be supported by a warp thread.

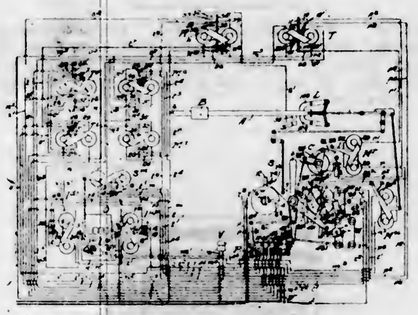
1,385,735. PROCESS OF AND APPARATUS FOR SUPPLYING SOAP. ABRAHAM TRAUBE, Brooklyn, N. Y. Filed Oct. 18, 1919. Serial No. 331,611. 6 Claims. (Cl. 87—16.)

1. The process of forming a soap solution which consists in conducting a solution of a soap forming acid in a non-aqueous solvent into contact with an alkali while substantially excluding water.

1,385,736. [WITHDRAWN.]

1,385,737. CAR-TRUCK. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 25, 1919. Serial No. 313,288. 12 Claims. (Cl. 105—197.)

1. In a car truck, the combination with a pair of side frames, of a bolster pivotally connected to said side frames,

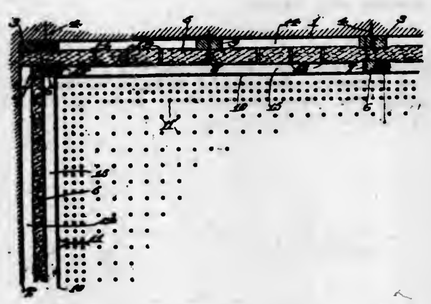


yielding pressure means interposed between the side frames and said bolster and yielding pressure means bearing on top of said bolster.

1,385,738. WAVE-MOTOR. ALEXANDER WHITTLE, Kearney, N. J. Filed Nov. 12, 1920. Serial No. 423,568. 3 Claims. (Cl. 103—67.)

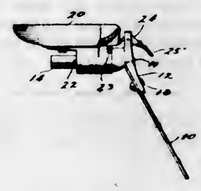
2. A wave motor comprising a pump, a pump rod, an impact frame, means for adjusting the impact frame along the pump rod and locking it in adjusted position, said means including an electric motor operable from the shore.

1,385,739. WEIGHING-MACHINE. ARTHUR A. ADAMS, Brookline, and FRANK A. EMERY, Ashmont, Mass., assignors, by mesne assignments, to Boston Scale and Machine Co., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1910. Serial No. 540,937. 107 Claims. (Cl. 265—7.)



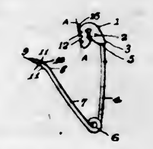
1. A machine of the class described comprising in combination, a beam, a poise thereon, a weight indicator, actuating means for said poise and indicator, recording means, key controlled starting means for said actuating means, locking means for said starting means and means including electric connections whereby said key may not be removed before the beam has tilted and the weight has been recorded.

1,385,740. ELECTRICAL HEATING ELEMENT OF ALLOY-STEEL. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed Dec. 2, 1919. Serial No. 341,967. 6 Claims. (Cl. 75—1.)



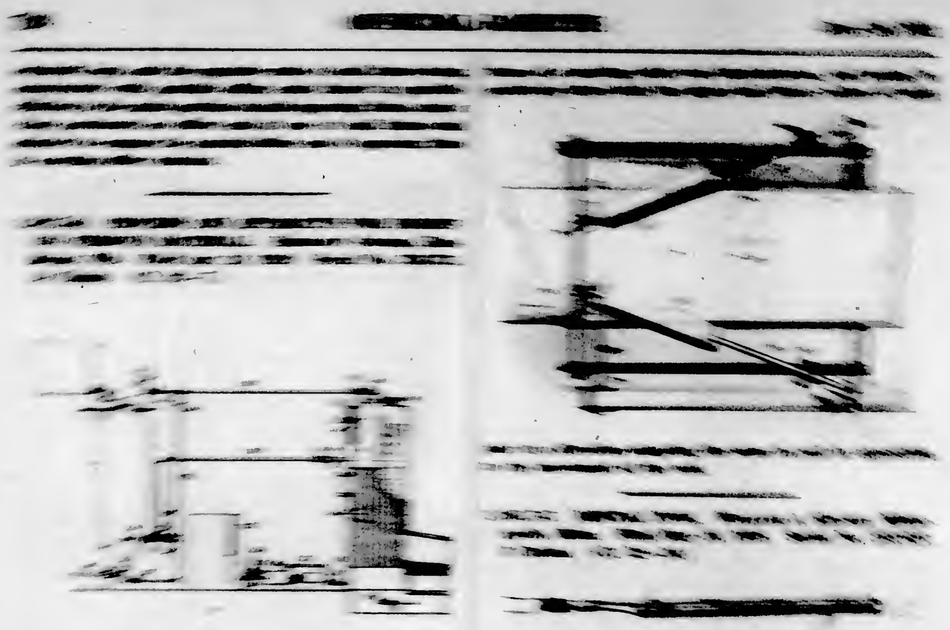
1. An electrical heating element made of alloy steel containing chromium about 20%, silicon about 2%, cobalt about 2%, carbon under about 1.5%, and the principal part of the remainder iron.

1,385,741. SOUND-DEADENER FOR BUILDING STRUCTURES. JAMES W. DILLON, Mount Vernon, N. Y. Filed Feb. 14, 1920. Serial No. 358,764. 8 Claims. (Cl. 20—4.)



1. In a building structure, the combination of a wall or ceiling surface of a room, an exposed perforated fabric membrane, and means for supporting said membrane in spaced relation and adjacent to said surface, whereby sound within said room is deadened.

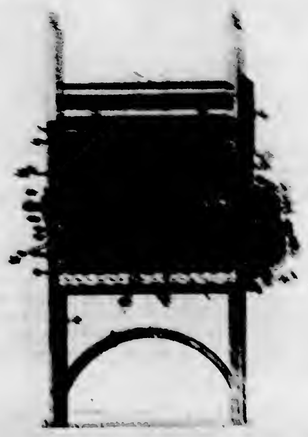
1,385,742. ADJUSTABLE SEAT. JOHN PIERCE EAKIN, Jollytown, Pa. Filed Apr. 9, 1921. Serial No. 459,807. 1 Claim. (Cl. 155—121.)



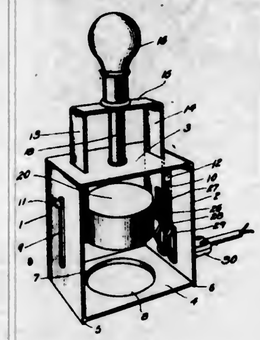
A seat mounting of the character described, comprising a stem having formed on its one end an enlargement with a downwardly extending portion adapted to be secured to a seat support, a sleeve journaled upon said stem, said sleeve having a plate extending from its one end adapted to support a seat, an upwardly extending member formed upon the enlarged portion of said stem, a latch member pivoted to said upwardly extending member and adapted to be brought into engagement with notches formed in the adjacent end of the sleeve whereby said sleeve may be adjustably held against turning movement upon said stem, and a spring associated with said latch and adapted for holding said latch in engagement with one of said notches.

1,385,743. SAFETY-PIN. CHARLES O. ELLERT, Brooklyn, N. Y. Filed Apr. 12, 1920. Serial No. 373,223. 4 Claims. (Cl. 24—161.)

2. A safety pin of the class described having opposing parallel limbs connected at one of their ends by a spring



2. A [illegible] washer consisting of two locking plates, an expansible post comprising telescopic sections, one of which is seated in one of said locking plates, a set-screw for holding said post-sections in position, on said plate, a locking bar on the other of said locking plates for engaging a head on the other of said post sections, said two post sections being connected together by a rod having threaded engagement with one of said post-sections, and a rotatable engagement with the other.



1,385,746. CLOTH-GUIDING DEVICE FOR CLOTH-FINISHING MACHINES. WILLIAM ALFORD HOGAN, Danville, Va. Filed June 24, 1920. Serial No. 391,495. 2 Claims. (Cl. 26—8.)

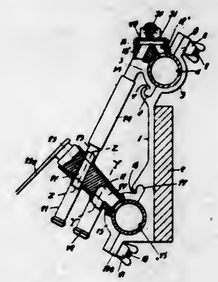
2. In a device of the character described, divergently disposed laterally spaced and relatively adjustable pairs of upper and lower rollers adapted to receive the side por-

A washing machine, comprising a suitable tub, with end heads carrying water-tight ball bearings; a peripherally corrugated wire mesh clothes cradle mounted in the tub, said cradle having end head-bracing means including integral major bracing means running longitudinally of the cradle and formed with stub axles supported in said bearing, auxiliary bracing means between the major bracing means preventing the wire mesh from sagging; a bearing structure on one head of the tub, and gearing carried by said structure and so operatively associated with the adjacent stub axle to enable the oscillation of the cradle to wash clothes contained thereby when a part of the gearing is in one position, and to continuously rotate the cradle and expel the water from the clothes by centrifugal action when said part is shifted to another position.

1,385,749. SEALING DEVICE. THEODORE C. MUELLER, Topeka, Kans., assignor of one-half to Windom L. Kemper, Topeka, Kans. Filed Jan. 23, 1920. Serial No. 353,468. 9 Claims. (Cl. 120—116.)

8. In a sealing device, a frame having a fusible-wafer receiving opening, a supplemental frame slidable with respect to the first named frame, an electrical heating element carried by the supplemental frame and having a face co-extensive with the opening, means for sliding the frame to bring the heating element into contact with a wafer in the opening, and contacts between the two frames and mounted to complete a circuit when the supplemental frame is moved in one direction and to break the circuit when the supplemental frame is moved in the opposite direction.

1,385,750. MILLING-CUTTER. ROBERT T. POLLOCK, Cambridge, Mass. Filed May 12, 1919. Serial No. 296,371. 1 Claim. (Cl. 29—103.)

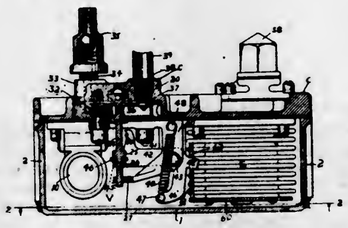


A milling cutter consisting of a head provided with a series of teeth forming front, peripheral and rear cutting edges, each tooth having a flat rake and clearance faces behind the three cutting edges thereof, and the front cutting edges lying in a plane to which the axis of the head is perpendicular, said head having grooves parallel to the front cutting edges of the alternate teeth and transecting the front cutting edges of the intervening teeth, subsantially as described.

1,385,751. MILKING-MACHINE INSTALLATION. JOHN SIME READ, Eltham, Taranaki, New Zealand. Filed Aug. 26, 1920. Serial No. 406,182. 5 Claims. (Cl. 31—99.)

1. In milking machine installations, a combination pipe line supporting bracket, pulsator, and milk and pulsator connection controlling tap.

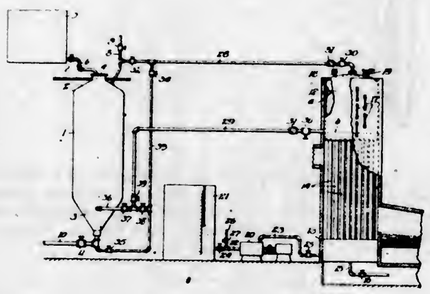
2. In milking machine installations, a vertical back plate provided with pipe line clamping means and having a pulsator appliance constructed to work on its upper end; and a tap mounted upon said clamping means to control milk and pulsator connections of the teat cups.



3. In milking machine installations, a vertical back plate provided with pipe line clamping means and having a pulsator appliance working on its upper end; a tap casing on said clamping means in communication with the milk pipe; a pulsator connection communicating with said casing, adapted to be put in communication with the outer spaces of teat cups; a milk connection adapted to be put in communication with the inner spaces of teat cups; and a plug constructed and working in said casing to control said connections.

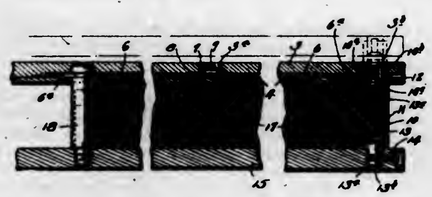
4. In milking machine installations, a vertical back plate having a pulsator appliance working on its upper end; pipe line supporting means on said plate, a clamp fitting said supporting means; a tap casing on said clamp in communication with the milk pipe; a connection between said casing and the pulsator; a pulsator connection communicating with said casing and adapted to be put in communication with the outer spaces of teat cups; a milk connection from said tap casing adapted to be put in communication with the inner spaces of teat cups; and a plug operating in said casing to control said connections.

5. In milking machine installations, a vertical back plate having a pulsator appliance working on its upper end; pipe line supporting means on said plate; a clamp fitting said supporting means; a tap casing on said clamp, in communication with the milk pipe; a connection between said pulsator and casing; a pulsator connection communicating with said casing and adapted to be kept in communication with the outer spaces of teat cups; a milk connection from said casing to be put in communication with the inner spaces of teat cups; and a plug containing an elongated port adapted to open the teat cup milk connection, and a port adapted to open the teat cups pulsator connection.



1,385,752. PNEUMATIC PUMP. DONALD H. REEVES, Dayton, Ohio. Filed June 21, 1919. Serial No. 305,720. 6 Claims. (Cl. 103—8.)

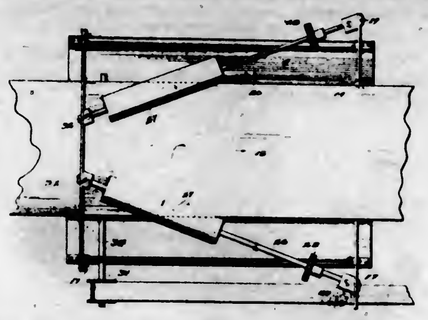
1. In a pneumatic pump, two pump chambers, a compressed air supply, a vent for said chambers, a compressed



actuated loop, and the opposite ends of said limbs being constructed with parallel offset ends flared in parallel relation to the main portion of said opposing limbs, and a clasp positioned on offset end of one of said limbs and adapted to engage the pointed offset end of opposing limb in coacting offset relation.

1,385,744. PROCESS AND APPARATUS FOR DIGESTING FIBROUS MATERIAL. HERMANN GEVERS, Kaukauna, Wis. Filed Apr. 24, 1920. Serial No. 376,371. 14 Claims. (Cl. 92—7.)

1. The process of digesting fibrous material for the manufacture of cellulose, which consists in preheating digestion liquor, introducing the same into a digester charged with fresh material, and continuing the digestion operation with steam developed by preheating the liquor for a subsequent operation.

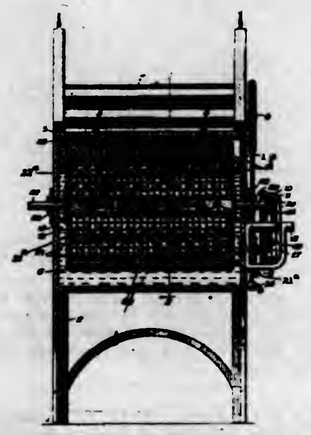


1,385,745. LOOSE-LEAF BINDER. CORBON L. HARVEY, St. Louis, Mo. Filed July 19, 1920. Serial No. 397,412. 3 Claims. (Cl. 129—13.)

2. A loose leaf binder consisting of two backing plates, an extensible post comprising telescopic sections, one of which is seated in one of said backing plates, a set-screw for holding said post-section in position, on said plate, a locking bar on the other of said backing plates for engaging a head on the other of said post sections, said two-post sections being connected together by a rod having threaded engagement with one of said post-sections, and a rotatable engagement with the other.

1,385,746. CLOTH-GUIDING DEVICE FOR CLOTH-FINISHING MACHINES. WILLIAM ALFORD HOGAN, Danville, Va. Filed June 24, 1920. Serial No. 391,495. 2 Claims. (Cl. 26—8.)

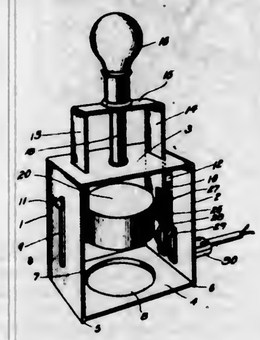
2. In a device of the character described, divergently disposed laterally spaced and relatively adjustable pairs of upper and lower rollers adapted to receive the side portions of a moving cloth web therebetween, and means to positively drive both the upper and lower rollers of each



pair in a direction adapting the same to pull in opposition to the movement of the web.

1,385,747. DENTAL TOOL. WILLIAM A. KELSEY, Minneapolis, Minn. Filed May 10, 1918. Serial No. 233,627. 3 Claims. (Cl. 32—10.)

3. A dental tool comprising, in combination, a handle or hand-grip portion and an offset shank projecting from one end thereof, said shank terminating in a cutting edge, said cutting edge and the points of pressure and rest on opposite sides of said hand-grip near the ends thereof being in alinement with each other.



1,385,748. WASHING-MACHINE. FRANK HOWARD MAYER, Denver, Colo. Original application filed Jan. 17, 1920, Serial No. 352,007. Divided and this application filed Apr. 24, 1920. Serial No. 376,271. 1 Claim. (Cl. 68—18.)

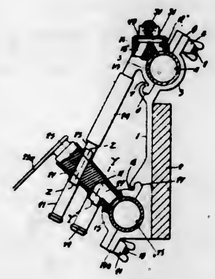
A washing machine, comprising a suitable tub, with end heads carrying water-tight ball bearings; a peripherally corrugated wire mesh clothes cradle mounted in the tub, said cradle having end head-bracing means including integral major bracing means running longitudinally of the

cradle and formed with stub axles supported in said bearing, auxiliary bracing means between the major bracing means preventing the wire mesh from sagging; a bearing structure on one head of the tub, and gearing carried by said structure and so operatively associated with the adjacent stub axle to enable the oscillation of the cradle to wash clothes contained thereby when a part of the gearing is in one position, and to continuously rotate the cradle and expel the water from the clothes by centrifugal action when said part is shifted to another position.

1,385,749. SEALING DEVICE. THEODORE C. MUELLER, Topeka, Kans., assignor of one-half to Windom L. Kemper, Topeka, Kans. Filed Jan. 23, 1920. Serial No. 353,468. 9 Claims. (Cl. 120—116.)

8. In a sealing device, a frame having a fusible-wafer receiving opening, a supplemental frame slidable with respect to the first named frame, an electrical heating element carried by the supplemental frame and having a face co-extensive with the opening, means for sliding the frame to bring the heating element into contact with a wafer in the opening, and contacts between the two frames and mounted to complete a circuit when the supplemental frame is moved in one direction and to break the circuit when the supplemental frame is moved in the opposite direction.

1,385,750. MILLING-CUTTER. ROBERT T. POLLOCK, Cambridge, Mass. Filed May 12, 1919. Serial No. 296,371. 1 Claim. (Cl. 29—103.)

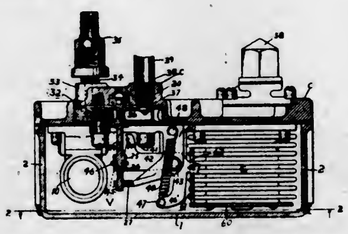


A milling cutter consisting of a head provided with a series of teeth forming front, peripheral and rear cutting edges, each tooth having a flat rake and clearance faces behind the three cutting edges thereof, and the front cutting edges lying in a plane to which the axis of the head is perpendicular, said head having grooves parallel to the front cutting edges of the alternate teeth and transecting the front cutting edges of the intervening teeth, subsantially as described.

1,385,751. MILKING-MACHINE INSTALLATION. JOHN SIME READ, Eltham, Taranaki, New Zealand. Filed Aug. 26, 1920. Serial No. 406,182. 5 Claims. (Cl. 31—99.)

1. In milking machine installations, a combination pipe line supporting bracket, pulsator, and milk and pulsator connection controlling tap.

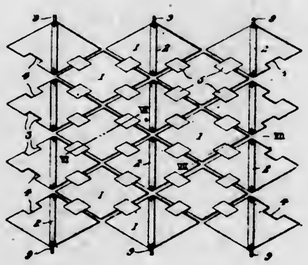
2. In milking machine installations, a vertical back plate provided with pipe line clamping means and having a pulsator appliance constructed to work on its upper end; and a tap mounted upon said clamping means to control milk and pulsator connections of the teat cups.



3. In milking machine installations, a vertical back plate provided with pipe line clamping means and having a pulsator appliance working on its upper end; a tap casing on said clamping means in communication with the milk pipe; a pulsator connection communicating with said casing, adapted to be put in communication with the outer spaces of teat cups; a milk connection adapted to be put in communication with the inner spaces of teat cups; and a plug constructed and working in said casing to control said connections.

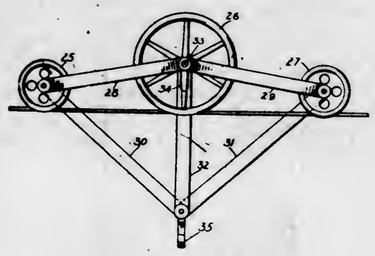
4. In milking machine installations, a vertical back plate having a pulsator appliance working on its upper end; pipe line supporting means on said plate, a clamp fitting said supporting means; a tap casing on said clamp in communication with the milk pipe; a connection between said casing and the pulsator; a pulsator connection communicating with said casing and adapted to be put in communication with the outer spaces of teat cups; a milk connection from said tap casing adapted to be put in communication with the inner spaces of teat cups; and a plug operating in said casing to control said connections.

5. In milking machine installations, a vertical back plate having a pulsator appliance working on its upper end; pipe line supporting means on said plate; a clamp fitting said supporting means; a tap casing on said clamp, in communication with the milk pipe; a connection between said pulsator and casing; a pulsator connection communicating with said casing and adapted to be kept in communication with the outer spaces of teat cups; a milk connection from said casing to be put in communication with the inner spaces of teat cups; and a plug containing an elongated port adapted to open the teat cup milk connection, and a port adapted to open the teat cups pulsator connection.



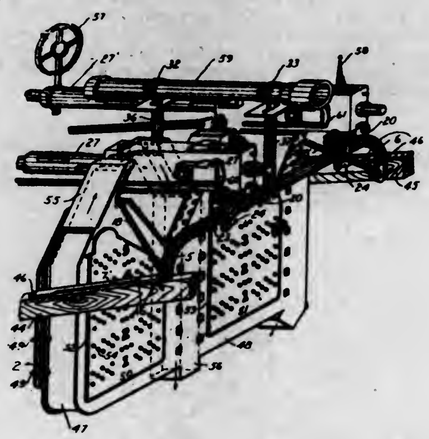
1,385,752. PNEUMATIC PUMP. DONALD H. REEVES, Dayton, Ohio. Filed June 21, 1919. Serial No. 305,720. 6 Claims. (Cl. 103—8.)

1. In a pneumatic pump, two pump chambers, a compressed air supply, a vent for said chambers, a compressed



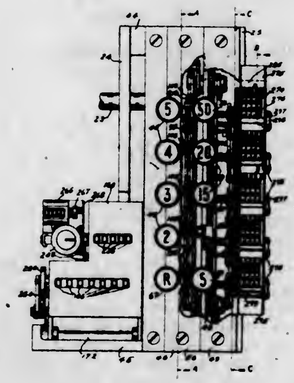
air inlet valve controlling both chambers, a vent valve common to both chambers, and intercommunicating bellows in said chambers operable by the compressed air and adapted to actuate both of said valves, the movement of said valves by the bellows being independent of the pumping action.

1,385,753. TIRE ARMOR AND ANTISKID DEVICE. ALBERT REMAR, Maynard, Ohio. Filed Feb. 24, 1921. Serial No. 447,433. 2 Claims. (Cl. 152—16.)



1. A tire armor and anti-skid device comprising a plurality of rhombus-shaped plates transversely curved coincident to the curvature of a tire, with the longitudinal axes of the plates extending circumferentially of the tire ribs extending between the obtuse angles of said plates, hinge connections between adjacent edges of the plates, means for anchoring the plates to a tire, said means including a plurality of V-shaped brackets having the spaced ends thereof connected to the adjacent edges of the laterally positioned plates, and reversely curved hooks carried by the inner ends of said brackets engaging the wheel rim to hold the tire armor in position.

1,385,754. BOGIE OR TROLLEY. HARRY DE COURCY RICHARDS, San Francisco, Calif. Filed Dec. 24, 1919. Serial No. 347,059. 3 Claims. (Cl. 105—150.)

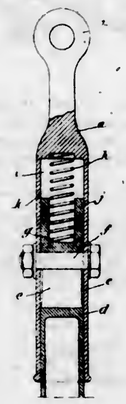


1. For use with an aerial cableway, a trolley comprising three wheels, axles for said wheels, pivoted links for connecting the axles of two of said wheels with the axle of the third wheel, a link depending from the axle of said third wheel and formed with a slot therein for engagement with said axle, load supporting means connected with the depending link, and links pivoted to said depending link and extending to the axles of the two first mentioned wheels.

1,385,755. GUN-MOUNT FOR AIRPLANES. JEAN A. ROCHÉ, Dayton, Ohio. Filed Mar. 10, 1919. Serial No. 281,667. 8 Claims. (Cl. 89—40.)

1. An airplane fixed gun mount, comprising a frame adapted to engage with two longérons of the fuselage, a gun holding means carried by said frame for holding a gun, adjustable means carried by said frame independently of the gun holding means for holding a gun sight.

1,385,756. TICKET PRINTING AND ISSUING MECHANISM. FRANCESCO SKEBL, New York, N. Y., assignor to The National Cash Register Company, Dayton, Ohio. Original application No. 64,067, filed Nov. 29, 1915. Divided and this application filed June 9, 1919. Serial No. 302,763. 9 Claims. (Cl. 235—3.)

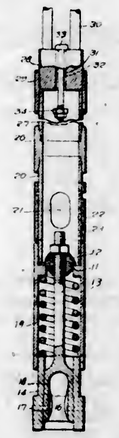


1. In a machine of the class described, the combination of a type carrier, differential mechanism for operating the type carrier, a totalizer, an actuating device for the totalizer and operated by said differential mechanism, a device connecting said actuating mechanism and said differential mechanism, a plurality of keys for controlling said differential mechanism, and a slidable plate operated by one of said keys to disable said connecting device.

1,385,757. PLASTIC COMPOSITION FOR BRICKS. JOHN SMITH, St. Louis, Mo. Filed July 17, 1919, Serial No. 311,510. Renewed Apr. 2, 1921. Serial No. 458,084. 1 Claim. (Cl. 106—24.5.)

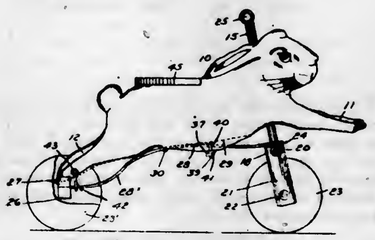
A plastic composition comprising cement, coal ashes and brick dust of substantially equal proportions.

1,385,758. ELASTIC ROD FOR MOTORS. EMILE JOSEPH AUGUSTIN SCHULTZ, Paris, France. Filed Sept. 24, 1918. Serial No. 255,513. 2 Claims. (Cl. 123—78.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an internal combustion engine, a telescopic connecting rod, comprising two parts adapted to slide one within the other at one end, means connecting the other ends with the parts respectively which are to be joined by the connecting rod, a spring between the sliding ends adapted to press them apart, said rod having an air chamber within the sliding ends, and packing between said parts to make a substantially air tight joint, the said spring being adapted to expand the connecting rod in order to drive the cylinder to the extreme end of the piston during the exhaust stroke and the said air chamber being adapted by compression of the confined air to cushion the contraction of the rod at the end of the compression stroke and at the moment of ignition.

1,385,759. TIME-FUSE. FRANCIS ARTHUR SUTTON, London, England, assignor to Clarence C. Williams, Acting Chief of Ordnance, U. S. Army, trustee. Filed Oct. 12, 1917. Serial No. 196,189. 11 Claims. (Cl. 102—36.)

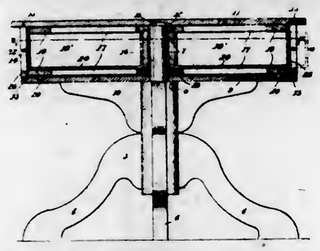


1. In a time fuse, a plurality of fuses crossing each other and leading to an explosive charge common to both; and means for igniting one of said fuses in advance of their point of crossing.

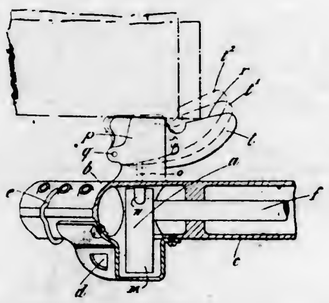
1,385,760. BAILER. IRA SWARTZ, Breckenridge, Tex. Filed Jan. 26, 1921. Serial No. 440,067. 4 Claims. (Cl. 166—19.)

1. A bailer comprising a cylinder, a valve stem mounted in the cylinder, a valve carried by the stem and adapted to close the upper end of the cylinder, a foot carried by the stem and slidable in the cylinder, a yielding member within the cylinder adapted to hold the valve normally yieldingly closed, a barrel communicating with the cylinder and positioned to receive material passing by the valve, and an air valve communicating with the barrel.

1,385,761. CHILD'S VEHICLE. ALFRED T. TIRADO, Kansas City, Mo., assignor of one-half to Frank C. Schaeffer, Kansas City, Mo. Filed Nov. 1, 1920. Serial No. 420,950. 12 Claims. (Cl. 208—165.)



1. In a vehicle comprising forward and rear axles, wheels supporting said axles, guiding means for the forward axles and a vehicle body, the combination with the axles of a body supporting spring plate mounted at the respective ends upon the respective forward and rear axles and adapted to constitute an oscillating support for said body and an attachment connecting the body of the vehicle with the spring plate between its respective forward and rear ends whereby combined oscillations are afforded the body of the vehicle with its spring support.

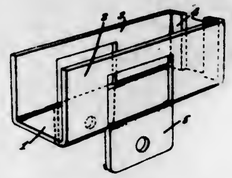


1,385,762. TABLE. JACOB TOPOR, Chicago, Ill., assignor to Handy Furniture Manufacturing Company, Chicago, Ill., a Corporation. Filed Feb. 11, 1920. Serial No. 357,824. 3 Claims. (Cl. 45—31.)

1. A table comprising a supporting pedestal having supporting legs and provided with a rigid reduced cylindrical upper end portion providing a shoulder at the base of said reduced portion, a circular horizontal platform fitted upon said cylindrical portion and resting on said

shoulder, a circular horizontal table top non-rotatably fitted upon the upper end of said pedestal in spaced relation to and above said platform, a horizontal frame revolubly mounted upon the cylindrical portion of the pedestal between the table top and the platform and including inwardly converging drawer guides and radially movable substantially triangular sliding drawers carried by said frame.

1,385,763. GAS-COOKING RING WITH MEANS FOR CONTROLLING GAS SUPPLY BY A KETTLE, SAUCEPAN, OR THE LIKE. ALFRED PEARCE-TOWL, Oxford, England. Filed July 14, 1920. Serial No. 396,289. 5 Claims. (Cl. 126—52.)



1. An automatic gas supply device for burner rings including in combination with the burner ring and fuel supply pipe, a valve carried by the fuel supply pipe, and an operator for the valve projecting above the plane of seating of a utensil above the burner and having a portion adapted to be progressively engaged by the utensil to variably control the valve.

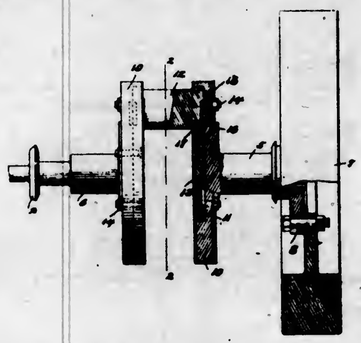
1,385,764. ILLUMINATED SIGN, FACIES, AND THE LIKE. HAROLD WILLIAM TWYMAN, Norbury, London, England. Filed June 22, 1920. Serial No. 390,763. 3 Claims. (Cl. 40—132.)

1. An advertising and display apparatus including a transparent character bearing section, a source of light and a plurality of independent colored screens moving in parallel planes and at different rates of speed and between said source of light and character bearing section.

1,385,765. STAY-IRON. ELMER J. WELLS, Nashua, Iowa. Filed Oct. 8, 1919. Serial No. 329,268. 2 Claims. (Cl. 72—108.)

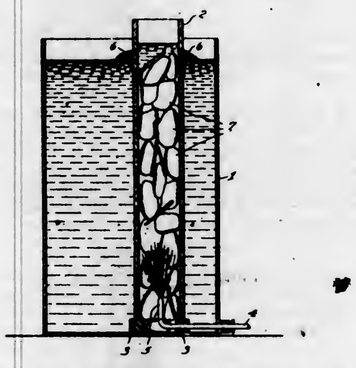
1. A studding socket formed of sheet metal bent to provide a studding receiving channel, ears struck downwardly from the channel, and an anchoring rod engaging within the ears and held thereby in spaced relation to the channel.

1,385,766. MONOGRAM-PRINTING DEVICE. LESTER A. WERNER, New York, N. Y., assignor to Flora W. Pinkus, New York, N. Y. Filed May 7, 1921. Serial No. 467,744. 9 Claims. (Cl. 101—375.)



1. Means for printing monograms including a plate having an aperture the size of the field of the monogram and having a projecting border-printing rib, and strips adapted to be disposed behind the plate and extending across the aperture therein and having raised letters on one face adapted to be disposed within and to fit the aperture in the said plate.

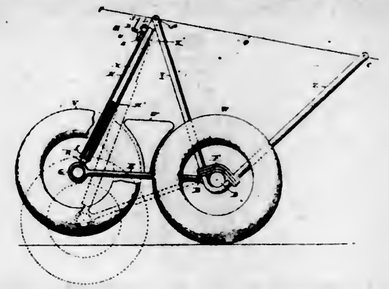
1,385,767. COMBINED TOOTHBRUSH AND PASTE-CONTAINER. ADOLF WIDMAIER, Atlanta, Ga. Filed Feb. 5, 1921. Serial No. 442,811. 4 Claims. (Cl. 132—84.)



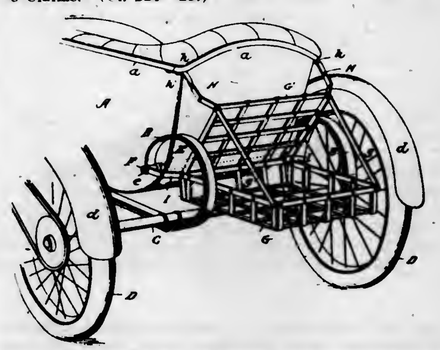
3. The combination with a paste holder having a removable cap provided with a suspension member, of a tooth brush, and connecting means looped to the handle of the tooth brush and swiveled to said cap.

1,385,768. VARIABLE-THROW CRANK-SHAFT. GLENN D. ANGLE, Dayton, Ohio. Filed Feb. 19, 1920. Serial No. 359,814. 2 Claims. (Cl. 74—38.)

1. In a variable throw crank shaft for engines, the combination of co-axial crank shaft sections having integral disk portions at their adjacent ends formed in their adjacent faces with eccentric recesses the diameter of which is greater than one-half the diameter of said disk portions, a crank pin having at its opposite ends eccentric disk portions of a size to fit flush into said eccentric recesses, the respective disk portions of the crank shaft sections and the crank pin having circular series of equally spaced bolt holes, and bolts insertible through said holes and the respective disk portions.



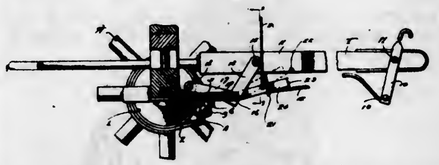
1,385,769. PROCESS OF MANUFACTURING IRON COMPOUNDS. FRANK BALL, Farmingdale, Long Island, N. Y., assignor to West Coast Kalsomine Company, West Berkeley, Calif., a Corporation of California. Filed Mar. 16, 1920. Serial No. 366,321. 8 Claims. (Cl. 23—13.)



1. The process of producing iron compounds, which consists in supporting pieces of metallic iron in a vessel and passing a stream of an oxidising medium through the vessel and through the body of iron therein.

1,385,770. LANDING-GEAR. WALTER HENRY BARLING, Hasbrouck Heights, N. J. Filed Feb. 17, 1921. Serial No. 445,846. 6 Claims. (Cl. 244—2.)

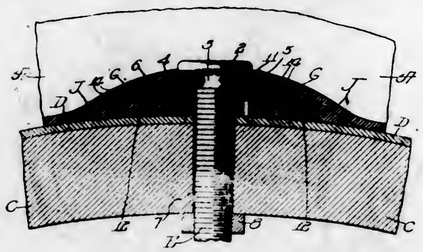
1. In an aircraft, a landing gear assembly comprising two landing gear members, one of said landing gear members being attached at a point but slightly forward of the center of gravity of the aircraft and the second landing gear member being placed in a position considerably forward of said first named landing gear member, said second named landing gear member being normally held in inoperative position and adapted to be shifted to an operative position for landing.



1,385,771. PACKAGE AND ARTICLE CARRIER FOR MOTORCYCLE SIDE CARS. WALTER L. BATTY, Baltimore, Md. Filed Sept. 4, 1919. Serial No. 321,549. 5 Claims. (Cl. 224—29.)

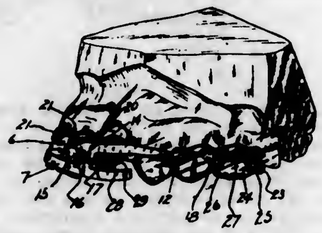
1. A package and article carrier, in combination with the transverse rod of a motor cycle side car, supporting springs for said side car, and arms offset from said carrier and extending through said springs and having openings adapted to freely receive the ends of the aforesaid supporting rod.

1,385,772. AUTOMATIC WAGON-BRAKE. ODVIN A. BERG, Whitehall, Wis. Filed Jan. 6, 1920. Serial No. 349,743. 2 Claims. (Cl. 188—117.)



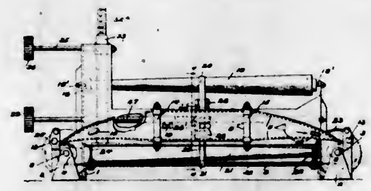
1. In an automatic brake, the combination with brake mechanism proper adapted for application to the front wheels of a vehicle; of a lever pivoted to the tongue and adapted for connection at its upper end with the neck yoke, a yoke whose arms are pivoted astride the tongue at its rear end, means connecting its bend both with the brake mechanism and the lower end of said lever, a latch pivoted to said bend and extending forward along the tongue, a guide on the latter supporting the front end of the latch, means for raising this end manually at will, and a stop on the tongue for coaction with the raised latch to prevent the application of the brakes.

1,385,773. PARACHUTE-HARNESS. EDWARD ROY BOLAND, Arcadia, Calif. Filed June 5, 1919. Serial No. 302,001. 8 Claims. (Cl. 244—21.)



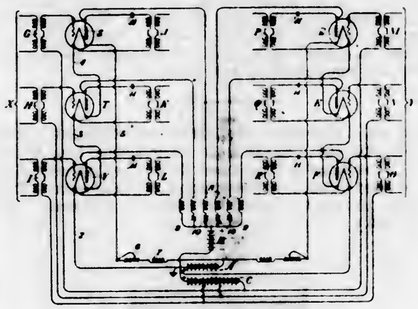
1. In a parachute harness, the combination of a breast strap, thigh-encircling straps, united connecting straps beween said breast strap and thigh-encircling straps, and suspension means on said united connecting straps.

1,385,774. BRIDGE FOR INNER TUBES. GEORGE W. BULLEY, St. Joseph, Mich. Filed Feb. 18, 1918. Serial No. 217,767. 2 Claims. (Cl. 152—13.)



1. The combination of a wheel rim, a tire outer casing, an inner tube within the casing with its inner periphery bearing upon said rim, and having an indented portion in said inner periphery, a valve stem extending through said indented portion and extending through said wheel rim, a nut on said stem for fastening it to said indented portion, a mass of rubber filling the space between said indented portion and the wheel rim, forming a bridge for supporting said indented portion adjacent the valve stem, and having a central recess surrounding said valve stem, and a cup member fitted in said recess and inclosing said nut.

1,385,775. DOUBLE-BAR ARCH-BAND. JOHN E. CANNING, Denver, Colo. Filed Feb. 4, 1919. Serial No. 274,833. 4 Claims. (Cl. 32—19.)

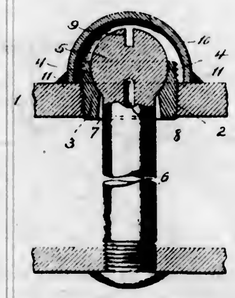


1. An arch band, whose front portion is composed of two spaced integral parts, one part having rearwardly-extending threaded stems adapted to coöperate with suitable anchorage.

1,385,776. GROUND-SPEED METER FOR AIRCRAFT. ROWLAND L. CHAMBERLAIN, Auburn, Calif. Filed Aug. 23, 1919. Serial No. 319,462. 3 Claims. (Cl. 33—46.)

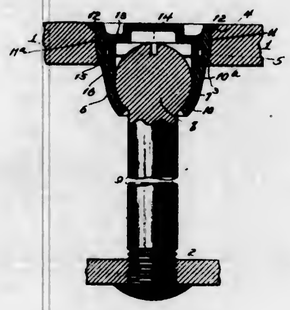
1. A ground speed meter comprising a continuously driven horizontal member provided with sighting marks, and a sighting device vertically adjustable with respect to said element and designed to coöperate with said sighting marks.

1,385,777. GRID-CIRCUITS FOR ELECTRON-TUBES. ALVA B. CLARK, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 20, 1919. Serial No. 298,368. 9 Claims. (Cl. 179—170.)



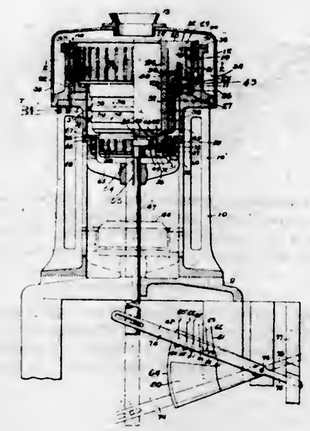
6. In combination, a plurality of electron tubes, a source of potential having terminals of graded negative potential with respect to the filaments of said tubes, respective independent input translating devices for the tubes, and circuits connecting said input translating devices with the respective grids, said circuits being connected to the respective terminals of said source of potential.

1,385,778. ILLUMINATING MEANS. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed July 25, 1917. Serial No. 182,744. 4 Claims. (Cl. 240—1.)



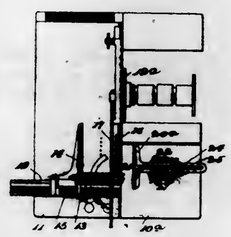
1. Illuminating means comprising a globe having a coating therein of phosphorescent material, a portion of said coating consisting of phosphorescent material combined with radioactive material in sufficient quantities to render said portion of the coating permanently luminous.

1,385,779. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed July 29, 1919. Serial No. 314,086. 1 Claim. (Cl. 85—1.5.)



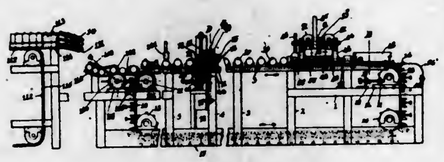
The combination with a boiler sheet having a threaded opening, of an externally threaded bearing sleeve passing through said opening and having an internal seat for the head of a staybolt, a staybolt having a headed portion entering said sleeve and mounted on the seat therein, a permanent closure consisting of a cap having its edge portion surrounding the opening in the boiler sheet and disengaged from said sleeve, said cap inclosing the bolt head mounted in said sleeve, and a weld around the edge portion of said cap and permanently uniting the latter with the boiler sheet.

1,385,780. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 10, 1919. Serial No. 322,875. 1 Claim. (Cl. 85—1.5.)



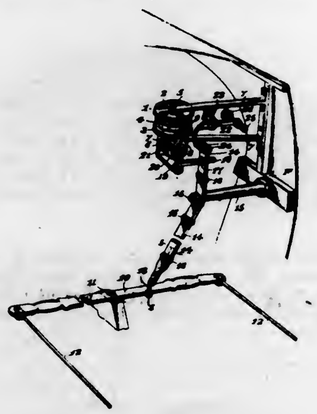
In a staybolt structure, a bearing member having an internal seat for the head of a staybolt, said bearing member having an annular transversely rounded head portion at its outer end and having its inner end portion rounded exteriorly, said bearing member also having a straight tapering exterior portion between its rounded inner end portion and its rounded head portion.

1,385,781. ELECTRICALLY-OPERATED CENTRIFUGAL CASTING-MACHINE. HAROLD G. EYNON, Philadelphia, Pa. Filed Oct. 3, 1919. Serial No. 328,171. 60 Claims. (Cl. 22—65.)



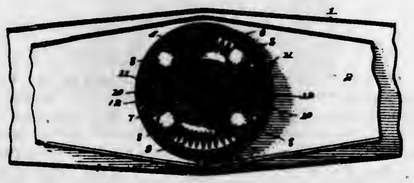
1. In the method of centrifugal casting with a mold formed in two parts, a body and a separable end, the novelty which consists in pouring the casting with the end in position, separating the end from the mold, removing the casting while maintaining rotation of the body of the mold and replacing the end to prepare for another casting.

1,385,782. BEVELING DEVICE. WILLIAM M. GARWOOD, Pittsburgh, Pa., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1920. Serial No. 353,347. 4 Claims. (Cl. 29—64.)



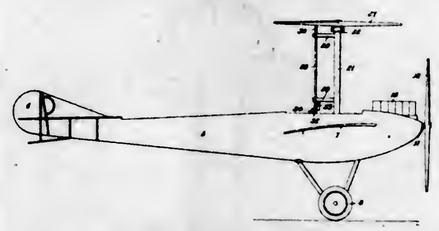
1. A device for beveling the ends of type-slugs or the like, comprising cutting means, an abutment beyond the plane of cutting of said cutting means, said abutment having a slug-engaging face, and means for adjusting said abutment to bring said face to a distance from the plane of cutting of said cutting means equal to the altitude of a right-angled triangle having the thickness of the slug to be beveled as one of its shorter sides, said adjusting means having indicia for designating the position of adjustment for slugs of varying thicknesses.

1,385,783. APPARATUS FOR APPLYING BINDING-POSTS TO DRY CELLS. JOHN C. GILLETTE, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Sept. 20, 1916. Serial No. 121,909. 11 Claims. (Cl. 113—59.)



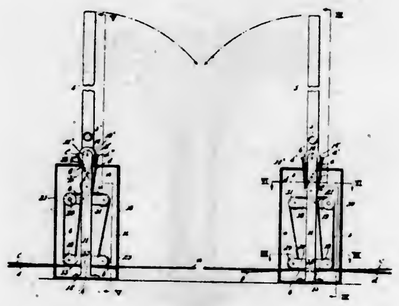
1. In apparatus for operating on a dry cell, a conveyer having means thereon for supporting dry cells, means for abrading a spot on said cells and a lifting member adapted to engage said supports and cells to raise the cells.

1,385,784. DRIFT-COMPENSATING DEVICE FOR AIRSHIPS. CHALMERS G. HALL, Washington, D. C. Filed June 25, 1919. Serial No. 306,631. Renewed May 11, 1921. Serial No. 468,837. 6 Claims. (Cl. 244—29.)



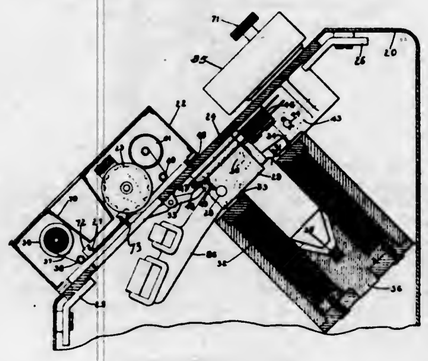
1. In combination with an airship, a rudder, a compass, a movable lubber line associated with said compass, and means to move said lubber line and said rudder simultaneously.

1,385,785. STEERING MECHANISM. ALFRED H. HOFER, Dayton, Ohio, and LUKE T. WICKEY, Los Angeles, Calif. Filed Oct. 25, 1920. Serial No. 419,481. 5 Claims. (Cl. 244—29.)



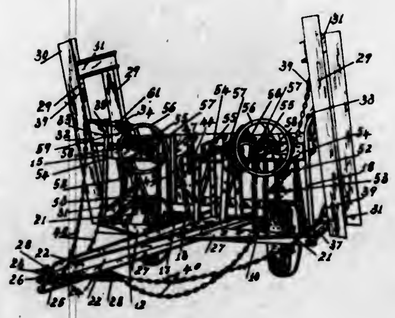
1. Irreversible self-locking steering mechanism for aircraft, embodying in combination, a centrally pivoted footoperable steering bar, a centrally pivoted rudder operating bar, a cam operable by and having a fixed relation to said rudder-operating bar, an annular stationary clutch member, a movable clutch member adapted to effect a locking engagement between said cam and stationary clutch member, and means on said foot operable steering bar to release said movable clutch member.

1,385,786. AEROPLANE. GEORGE HEIS, Simpson, W. Va. Filed Dec. 16, 1920. Serial No. 431,291. 9 Claims. (Cl. 244—15.)



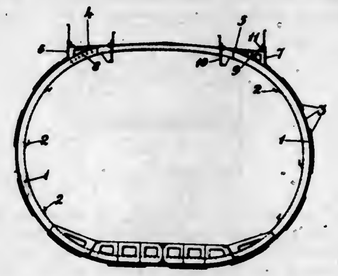
1. In combination with an aeroplane having a fuselage with a main propeller actuating motor at the forward end thereof, said motor being provided with a rearwardly projecting drive shaft, a dust-proof upright rigidly mounted at the rear end of said shaft, a vertical shaft journaled within said upright and rotatably geared to the first named shaft, an overhead auxiliary propeller operatively connected to the upper end of said second named shaft, means operable by a person within the fuselage to disconnect the second named shaft from the drive shaft, and means operable by the person within the fuselage to releasably maintain the overhead propeller against rotation when said second named shaft is disconnected from the drive shaft, said last named means including a vertically slidable rod having a yoke upon its upper end arranged to embrace the rear wing of the propeller when said rod is raised.

1,385,787. RAILROAD-GATE. DMITRO HRYNIEWICH, Livermore, Pa. Filed Aug. 13, 1920. Serial No. 403,261. 1 Claim. (Cl. 246—293.)



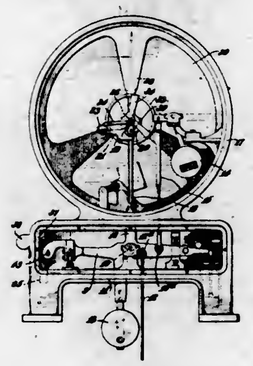
A railroad crossing gate comprising supporting standards, gate arms pivotally mounted in the upper ends thereof, a pair of rope connections between the lower ends of said arms with the opposite ends of each rope connected respectively to the inner and outer sides of the arms, guide pulleys supported on said standards over which the rope connections pass, train operated means arranged at each side of the gate having rope connections with the adjacent gate arms for operation thereof, the rope connections between the arms effecting simultaneous movement thereof, and guide pulleys supported on said standards for the ropes connecting the train operated means to the gate arms.

1,385,788. CREDIT-SLIP-AUTHORIZING APPARATUS. ARTHUR C. KIASHNER, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed Dec. 19, 1919. Serial No. 346,145. 18 Claims. (Cl. 101—318.)



2. In a store system, the combination of a marking device, a normally inoperative controlling means therefor, and a plurality of means located in the marking device operable for rendering the controlling means operative.

1,385,789. ROAD-DRAG. FRANK R. MILLER, Springfield, Ill. Filed Feb. 27, 1920. Serial No. 361,647. 6 Claims. (Cl. 37—7.)

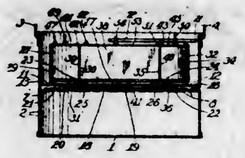


1. In a road drag, the combination of a drawbar structure comprising angle bars diverged from the front toward the rear; a transverse bar uniting the converged ends of the angle bars; and having a pair of notches adjacent to each end of said transverse bar, a main frame; wheels supporting the main frame; two laterally extendible drag-units hinged at the respective ends of the main frame, and two pairs of chains engaging in the pairs of notches adjacent to the respective ends of said transverse bar, one chain of each pair being attached adjacent to the outer end of one lateral drag-unit and the other chain of the same pair being attached adjacent to the inner end of the same drag-unit, to exert uniform forward pull at both ends of the respective extended drag units.

1,385,790. TUBULAR SHIP'S HULL. GIUSEPPE VITULLI MONTARULI, Rome, Italy. Filed Aug. 28, 1919. Serial No. 320,544. 1 Claim. (Cl. 114—85.)

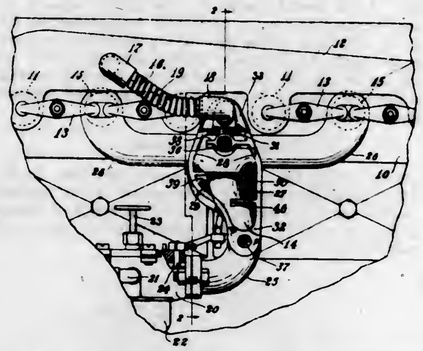
A ship's hull having a plurality of circular transverse frames, a number of said frames being formed with a flattened portion at the top, the remaining frames terminating adjacent the flat portion on either side thereof, hatchway stringers mounted on the ends of said remaining frames to form a passage therebetween, plates for securing said stringers to the frame, angle brackets secured to the curved portion of the frames adjacent the plates adapted to form a horizontal deck-supporting portion at either side of the hatchway and plating for covering the angle brackets and curved portions of the hull from points adjacent the angle brackets, whereby the angle brackets are adapted to form a deck-supporting structure adjacent the hatchway.

1,385,791. SCALE. LOUIS ASHLEY OSGOOD, Dayton, Ohio, assignor, by mesne assignments, to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Feb. 7, 1920. Serial No. 356,930. 9 Claims. (Cl. 265—62.)



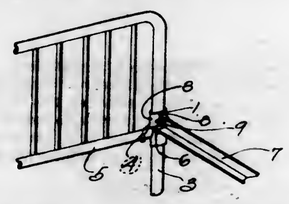
1. In a scale, in combination, a scale lever, a dial and a pointer adapted to swing thereover, a pinion connected to the pointer to actuate the same, an arm extending from the lever toward the pinion, a rack to rotate the pinion, and a spring supported by the arm, carrying the rack and serving to maintain the same in mesh with the pinion.

1,385,792. COMBINATION FISH AND BAIT BUCKET. HERBERT H. PETTY, Indianapolis, Ind. Filed July 16, 1920. Serial No. 396,733. 7 Claims. (Cl. 43—55.)



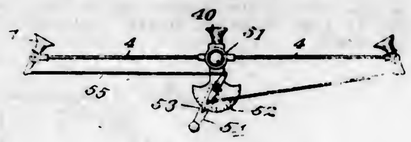
7. A combination fish and bait bucket comprising a bottom and a side wall that are oval in plan, a perfo-

rated floor secured to the side wall and having a door-way, provided with a door and having reticulate portions adjacent to said wall, a pail connected to said wall, two end pails arranged upon the floor with studs between the floor and the pail bottoms, each end pail having a hinged and latched perforate cover provided with a handle, and



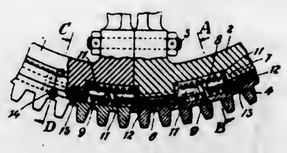
a main pail that is rectangular in plan and arranged upon the floor with studs between the floor and the pail bottom, the main pail being between the end pails and between the reticulate portions of the bottom and having a hinged and latched cover provided with a handle to carry the pail.

1,385,793. METHOD OF VAPORIZING LIQUID FUELS AND MEANS THEREFOR. ROBERT M. PIERSON, Akron, Ohio. Filed Sept. 3, 1920. Serial No. 407,901. 21 Claims. (Cl. 123—122.)



1. The method of operating internal-combustion motors which comprises mixing the air and fuel spray in a suction carbureter, controlling the motor by variably throttling the mixture, vaporizing the fuel in the mixture by diverting a portion of the motor exhaust gases into heating relation with the wall of the mixture passage, and discharging the diverted gases through said wall into said passage at a point posterior to the throttling point.

1,385,794. BEDPOST-HANGER. OTTO PIOTTER, Harbor Beach, Mich. Filed Jan. 17, 1921. Serial No. 437,745. 1 Claim. (Cl. 5—55.)



A bed post hanger made of a single piece of metal and embodying side flanges to engage the bed post, a downwardly directed hook to engage the end rail, and a sleeve to engage the side rail.

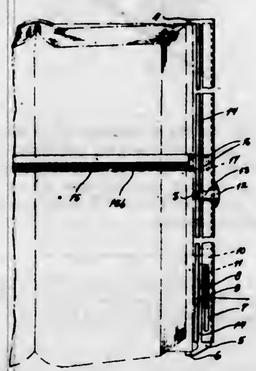
1,385,795. METHOD OF AND APPARATUS FOR DETECTING AND LOCATING SOUND, &c. ELIAS E. RIES, New York, N. Y. Filed June 20, 1912. Serial No. 704,713. 15 Claims. (Cl. 181—26.)

1. A sound-locating apparatus comprising a pivotal swinging support, two separated sound-receivers mounted on said support at opposite sides of and substantially equal distances from its pivotal point, and means associated with said pivotal support and sound-receivers, for equalizing and comparing the relative intensities of the sounds collected by said receivers as the support is swung about its pivotal point, whereby both the direction and distance of the sound from the place of observation are directly indicated and ascertained.

1,385,796. RESILIENT GEAR-WHEEL. ALBERT ROTH, Chernez-sur-Montreux, and AUGUSTE ROMANG, Fontanivent-sur-Clarens, Switzerland. Filed Nov. 26, 1920. Serial No. 426,405. 2 Claims. (Cl. 74—29.)

1. In a resilient gear wheel, a rim revolubly movable on the felly of the wheel and provided with undercut projections adapted to engage with similarly shaped grooves in the face of the felly of the wheel, a plurality of spring sockets employed in pairs, each spring sockets fitting into a recess provided therefor in the felly of the wheel and extending into the space between the ribs on the rim, a spring extending between each pair of said spring sockets, a bolt extending from each spring socket and lying within the spring associated therewith, and a stop between each pair of spring sockets lying within the recess between the ribs on the rim and secured in position therein.

1,385,797. HAIR-WAVER. HENRY M. SIEGEL, Malden, Mass. Filed May 24, 1921. Serial No. 472,214. 5 Claims. (Cl. 132—40.)



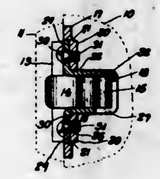
1. A hair-waving device comprising a body-portion provided with a double series of cleats adapted to have a lock of hair wound sinuously back and forth around the same in an alternating succession, for forming a series of

undulations or waves in said lock, a comb at one end of said body-portion adapted to be engaged in said lock at or

adjacent the root-ends of the hairs, and a lock-retaining finger at the opposite end thereof.

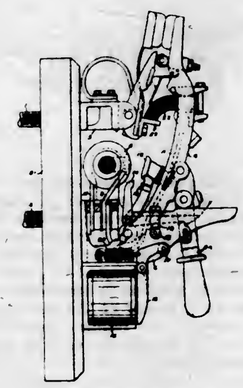
1,385,798. SELF-ILLUMINATOR FOR READING AND WRITING. HYMAN SIBOT and HARRY SIBOT, New York, N. Y. Filed Dec. 4, 1920. Serial No. 428,419. 2 Claims. (Cl. 240—1.)

2. A device of the class described comprising a pair of legs hinged together, said legs being of substantially semi-cylindrical cross-section, means upon the ends of said legs for securing the device to a book or the like, a slot extending throughout the lengths of said legs, a rod slidably mounted in said slot, said rod being provided with luminous paint on the surface thereof.



1,385,799. RIVET OR FASTENER. RAPHAEL L. SMITH, St. Louis, Mo. Filed July 11, 1918. Serial No. 244,384. 3 Claims. (Cl. 85—37.)

3. Elements adapted to be fastened together having holes therethrough threaded for a portion of their length,

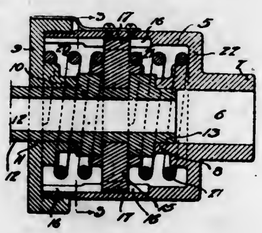


in combination with fasteners threaded for a portion of their length screwed into the threaded portion of said holes and enlarged to fill the remaining portions of the holes after being placed in position.

1,385,800. HINGE. JOSEPH SOSS, New York, N. Y. Filed Mar. 7, 1921. Serial No. 450,160. 6 Claims. (Cl. 16—135.)

3. In a hinge butt of the class described, an attaching plate fashioned from sheet metal and provided with an elongated recess in one face thereof formed by pressing the material of said plate inwardly, the depth of said recess being less than the thickness of the material of said plate and the transverse and vertical dimensions of said inwardly pressed portion being less than the corresponding dimensions of said recess, and the central part of said inwardly pressed portion being provided with an aperture.

1,385,801. MAGNETIC CONTROLLING MECHANISM. HALFDAN A. STEEN, Christiania, Norway, assignor, by mesne assignments, to Allis-Chalmers Manufacturing Company, a Corporation of Delaware. Original application filed June 19, 1911, Serial No. 634,149. Divided and this application filed Aug. 21, 1918. Serial No. 251,344. 10 Claims. (Cl. 200—87.)



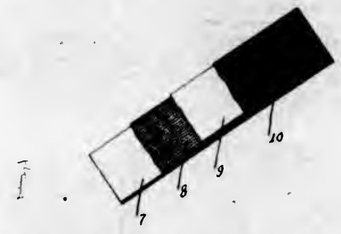
1. In a magnetic controlling mechanism, stationary terminals, an overload coil disposed at one side of one of said terminals, means including a member for electrically bridging said terminals and for connecting said overload coil in series with said terminals and said bridging member, latch means operable by said overload coil for normally holding said member in bridging position, and an auxiliary coil disposed at the other side of the same terminal, all of said elements being in substantial alinement.

1,385,802. ELECTROPLATED PROPELLER FOR AERIAL VEHICLES. MILES C. ST. JOHN, Chicago, Ill., assignor of one-half to James Erickson, Chicago, Ill. Filed Feb. 18, 1920. Serial No. 359,523. 6 Claims. (Cl. 170—159.)

1. A propeller comprising a core of pressed fibrous pulp, and an electroplating of metal.

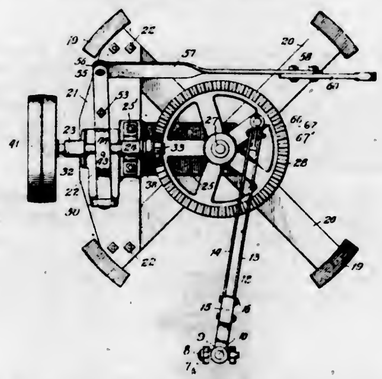
1,385,803. FLEXIBLE DRIVE CONNECTING DEVICE. WARREN M. STONE, Camden, N. J. Filed Sept. 10, 1920. Serial No. 409,429. 3 Claims. (Cl. 64—96.)

1. A device of the character described including a rotatable housing having alined bores in its opposite ends; a hollow rotatable shaft having portions fitting said bores, said shaft between said portions having a screw thread and parts abutting the ends of the housing whereby relative longitudinal movement of said shaft and housing is prevented; a collar in screw threaded engagement with said screw thread of the shaft and slidably keyed to said housing; and resilient means opposed between said collar and the opposite ends of said housing; substantially as described.



1,385,804. SPRING-TIRE. WILLIAM E. STOUT, Seattle, Wash. Filed Oct. 9, 1920. Serial No. 415,824. 1 Claim. (Cl. 152—8.)

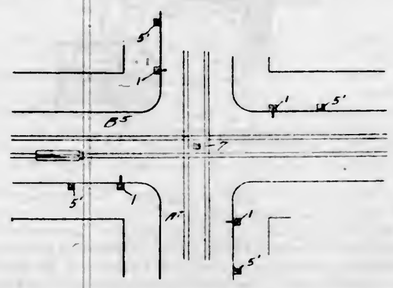
A spring tire for vehicles comprising a rim adapted to fit a wheel center, tread sections each comprising a transversely concaved plate longitudinally curved to form a segment of a circle and having a tread surface of a compressible elastic material as rubber, yokes having pivot eyes and secured to the inner sides of the said concaved plate, a pivot bolt connecting the pivot eyes at opposite sides, a plate secured to the rim and having side lugs provided with radially positioned slots receiving said pivot pin, said rim plate and the tread plate having spring



retaining bosses toward their ends and helical springs having their ends surrounding said bosses.

1,385,805. MATERIAL FOR PRODUCING PATCHES FOR PNEUMATIC TIRES AND THE LIKE. JOHN J. VOORHEES, Jersey City, N. J. Filed July 11, 1919. Serial No. 310,041. 4 Claims. (Cl. 154—48.)

1. A material for the production of patches for repairing pneumatic tires and the like, consisting of a layer of vulcanized rubber, a layer of elastic fabric vulcanized thereto, and a layer of unvulcanized rubber permanently united to the fabric, said material being stretchable longitudinally and transversely.

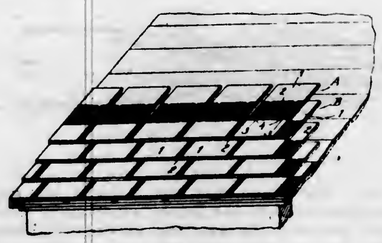


1,385,806. WASHING-MACHINE MECHANISM. WILLIAM H. VOSS, Davenport, Iowa. Filed July 30, 1917. Serial No. 183,429. 4 Claims. (Cl. 74—7.)

1. In apparatus of the class described, a support, an operating lever pivoted to the side of said support, a horizontal power shaft slidably mounted beneath said support, a pinion on said shaft, a single means connected with the support and engaging the pinion to prevent longitudinal movement thereof in either direction but permitting rotary movement thereof, a gear driven by said pinion, connecting means between said gear and said lever, and a clutch mechanism associated with said pinion, whereby the same may be thrown into or out of operation upon longitudinal movement of said shaft.

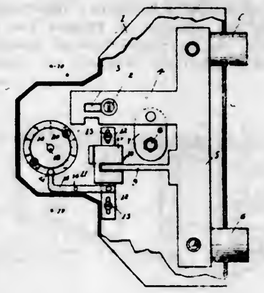
4. In apparatus of the class described, a support, a lever pivoted to the side of said support, a pitman beneath said support, and a universal connection between said lever and said pitman comprising a vertical bearing formed in the end of said pitman, a sleeve seated on the upper edge of said bearing, a shaft pinned in said sleeve and rotatably mounted in said bearing, and said lever having pin connection with said sleeve

1,385,807. TRAFFIC SIGNAL SYSTEM. RALPH E. WETTER, Dallas, Tex., assignor to Universal Traffic Control Company, (a Trust Estate), Dallas, Tex. Filed Nov. 23, 1918. Serial No. 263,916. 5 Claims. (Cl. 177—330.)



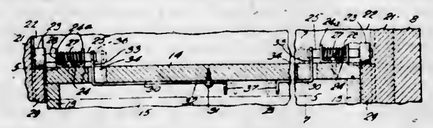
1. In a traffic control system, the combination with a signal pole having electrically controlled signals located at a street corner, and a companion signal pole placed apart from the first signal pole.

1,385,808. SHOE-FILLER. HERBERT ABRAHAM, New York, N. Y., assignor to The Rubberoid Co., a Corporation of New Jersey. Filed Nov. 17, 1917. Serial No. 202,536. 1 Claim. (Cl. 106—3.)



A waterproof shoe bottom filler, composed of bituminated non-felted fibers, which when heated within a range of from 200 to 400 degrees Fahrenheit will assume a plastic consistency, enabling it to be readily troweled into the cavity between the sole and insole of a shoe, and which at atmospheric temperatures will regain a tough, resilient and pliable state.

1,385,809. SHINGLE. HERBERT ABRAHAM, New York, N. Y., assignor to The Standard Paint Company, a Corporation of New Jersey. Filed Dec. 1, 1919. Serial No. 341,791. 5 Claims. (Cl. 108—8.)



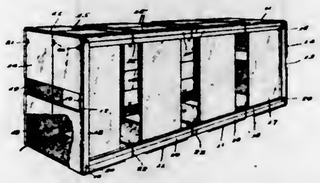
5. A shingle composed of bituminized fabric having a transverse band of contrasting color on its weather surface intermediate the shingle ends.

1,385,810. COMBINATION-LOCK. ARTHUR F. BLECHSCHMIDT, Dayton, Ky., assignor of one-half to Walter E. Beaty. Filed Apr. 18, 1918. Serial No. 229,251. 2 Claims. (Cl. 70—53.)

1. In a lock, the combination with locking bolts and tumblers, a bolt stop in connection with said bolts, a bolt check slidably mounted intermediate said tumblers and said bolt stop, said bolt check having an opening adapted to receive said bolt stop to permit the operation of said bolts, a tumbler arm pivotally mounted adjacent said bolt check and arranged to maintain a desired relation between said tumblers and said bolt check, means whereby upon the removal of said tumblers, when the bolts are in locking position, said bolt check is moved gravitationally, and means whereby when so positioned it is adapted to secure the bolts in such position, and means arranged to engage said bolt check when so positioned gravitationally to prevent raising the bolt check.

1,385,811. GUIDE OR SUPPORT FOR DRAWERS AND THE LIKE. JACOB BODENSTEIN, Herkimer, N. Y. Filed Mar. 8, 1919. Serial No. 281,323. 10 Claims. (Cl. 45—77.)

1. In an article of furniture, the combination of a sliding member, a guide therefor, a stop, means for supporting the front portion of said sliding member, a roller on said sliding member which rolls on said guide to support the rear portion of said sliding member and which engages said stop and is adapted to be shifted to a position to pass said stop and permit the removal of the sliding member from said guide, said roller, when so shifted also permitting the insertion of said slide into said article of furniture, and means which automatically shift said roller into said guide when moved inwardly beyond said stop.

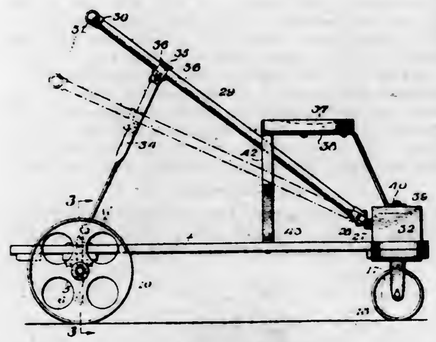


1,385,812. SUPPORTING DEVICE FOR FALSE TEETH. FRED A. BINNS, Addison, Mich. Filed July 18, 1919. Serial No. 311,693. 4 Claims. (Cl. 84—465.)

3. In a device for supporting a set of false teeth in the mouth of the user, a pair of spaced plates arranged for engagement with the lower surface of an upper set of false teeth whereby falling movement of the upper set is

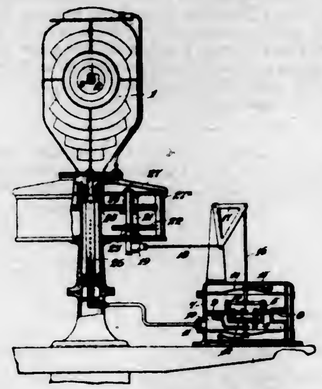
prevented, said plates being arranged in spaced relation to each other to define an opening therebetween, as and for the purpose specified.

1,385,813. WIREBOUND PACKAGE. JEFFERSON CAYLOR, Indianapolis, Ind., assignor to Pioneer Box Company, Crawfordsville, Ind., a Corporation of Indiana. Filed Dec. 2, 1919. Serial No. 342,005. 8 Claims. (Cl. 217—43.)



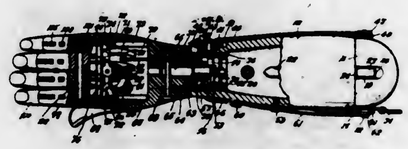
1. A package comprising relatively foldable cleated sections flexibly connected by binding members; and a cooperating cleated section having flexible connecter members projected therethrough and attachable to portions of the foldable sections.

1,385,814. DOOR-FASTENING. ROSS N. CLANIN, Whiting, Ind. Filed June 30, 1920. Serial No. 393,071. 3 Claims. (Cl. 292—285.)



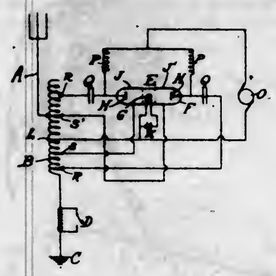
1. A door fastening including a pair of plates one of which is to be mounted on a door and the other upon the adjacent door jamb and the plates to be then connected together, said plates having securing screws projecting on their inner sides and being provided with spur formations bent to have their points in front of the plane of the inner sides of said plates.

1,385,815. VEHICLE. JAMES H. COLLINS, Harrisburg, Pa. Filed July 19, 1919. Serial No. 311,957. 2 Claims. (Cl. 208—33.)



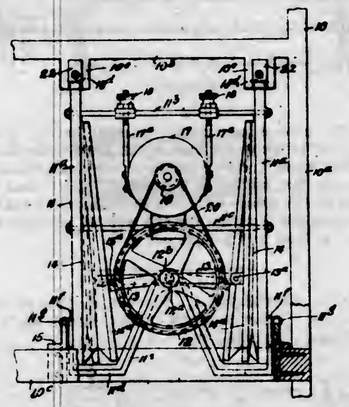
1. A vehicle, comprising a driving-wheel, a crank connected thereto, a revoluble stud, a steering-wheel carried by said stud, a bevel-gear also carried by said stud, a second bevel-gear coöperating with said first gear, and a member connected by means of a toggle to said second gear and connected by a link to said crank.

1,385,816. ROTATING GASLIGHTING APPARATUS. GUSTAF DALÉN, Lidingön, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J. Filed Nov. 16, 1916. Serial No. 131,647. 1 Claim. (Cl. 67—111.)



In a rotating gas lighting apparatus the combination of a burner, a diaphragm apparatus for producing a mixture of gas and air under a constant pressure, said apparatus comprising a member which moves rectilinearly alternately in opposite directions, a conduit for conveying the gas and air mixture from the said diaphragm apparatus to the said burner to produce a continuous and practically constant flame in the latter, a lens apparatus associated with said burner, a continuously rotating shaft to which the said lens apparatus is secured and upon which it is supported and with which it continuously rotates, connections between the said shaft and the said alternately moving member of the said diaphragm apparatus, said connections comprising means for converting intermittent rectilinear movements of the said alternately moving member into intermittent rotary movements, the intermittently rotating portions of said connections being in operative engagement with the said shaft whereby intermittent rotary movements are transmitted to the said shaft and a relatively heavy member having operative connection with the said shaft to insure that the intermittent movements transmitted thereto by the said connections shall be converted into a continuously rotating movement.

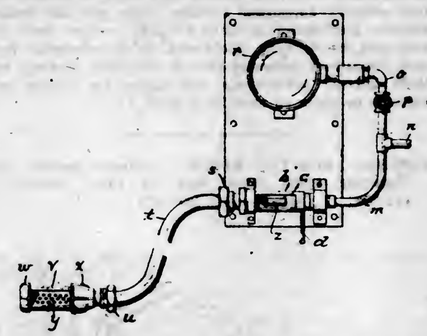
1,385,817. ARTIFICIAL ARM AND HAND. OTTO LE GRAND DILWORTH, Hartford, Conn. Filed Mar. 23, 1917. Serial No. 157,032. 35 Claims. (Cl. 3—12.)



1. An artificial limb including an upper arm and a forearm pivotally attached thereto, an actuating member movably secured to the upper arm and located to receive pressure between said upper arm and the body of the wearer for actuation of said member, and a connection between said actuating member and forearm to effect bending movement of the latter.

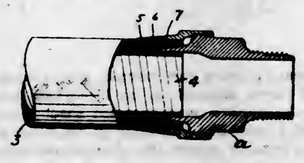
1,385,818. RADIO-TRANSMITTER. CLAIR L. FARRAND, Elizabeth, N. J., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed June 14, 1919. Serial No. 304,290. 2 Claims. (Cl. 250—17.)

1. In radio transmitting apparatus, the combination of a vacuum valve having a heated cathode, a plurality of cold elements or plates, a plurality of plate circuits and connections for causing said vacuum valve to generate oscillations in the plate circuits, an antenna, an inductance coil connected in the antenna and plate circuits and a plurality of influencing members connected to points on said inductance coil at which the potentials are substantially out of phase.



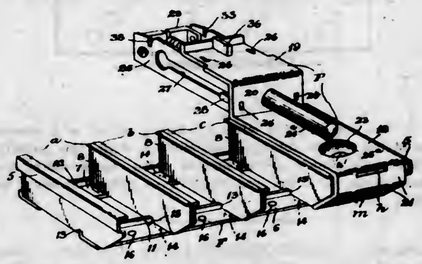
1,385,819. MOTOR-MOUNTING FOR PLAYER-PIANOS. CHARLES FREBORG, Kankakee, Ill., assignor to Price & Teeple Piano Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1919. Serial No. 314,525. 8 Claims. (Cl. 230—2.)

1. In combination, a piano structure comprising a casing, a frame locatable therein, an exhauster means, and a motor therefor carried by said frame, said frame being pivotally mounted to move into or out of said casing.



1,385,820. PNEUMATIC RIVET-PASSING APPARATUS. WILLIAM B. FURMAN, Chester, Pa. Filed Aug. 29, 1919. Serial No. 320,574. 10 Claims. (Cl. 302—2.)

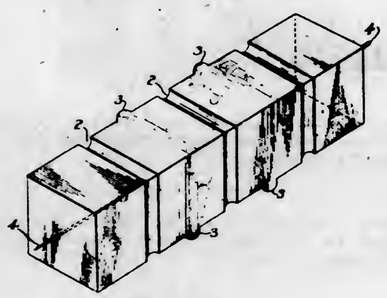
1. In a rivet passing apparatus, the combination of a despatcher chamber adapted to receive a rivet, a compressed air supply conduit and a rivet-conveying conduit, both connected with said chamber, a closure for said chamber, a separate spring-actuated valve normally closing communication between the air supply conduit and said chamber, and means operatively connected with such



closure and valve adapted to close said closure and open said valve, said valve automatically closing upon the opening of the closure.

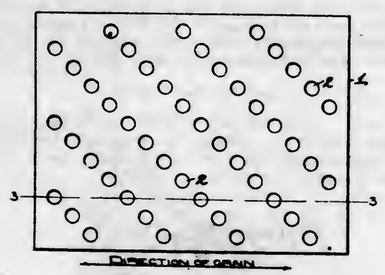
1,385,821. METAL-LINED HOSE. HOWARD W. GOODALL, Aldan, Pa. Filed Aug. 31, 1920. Serial No. 407,080. 5 Claims. (Cl. 137—90.)

1. Metal lined hose in which the outer rubber and the metal lining parts are co-extensive and which is adapted to receive a tapering coupling sleeve between its outer rubber and metal lining parts of which the latter comprises a pair of substantially half round wires disposed one with its flat face and the other with its round face toward the inner surface of the outer rubber part, said round and flat faces being flush and in contact with said inner surface and each arranged in the form of a spiral having a pitch substantially equal to the width of the flat face of the other, substantially as described.



1,385,822. VENDING-MACHINE. ALBERT D. GROVER, New York, N. Y., assignor to Autosales Corporation, a Corporation of New York. Filed May 8, 1918. Serial No. 233,104. 9 Claims. (Cl. 211—8.)

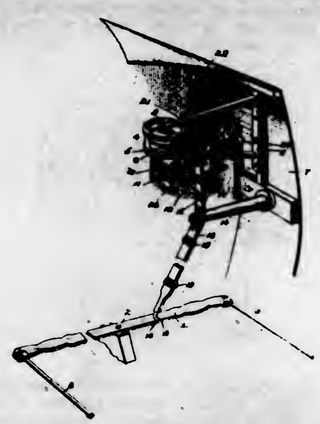
5. In a vending machine, a casing, a framework supported between the sides of said casing and removable as a whole, said framework comprising a transverse supporting base and a plurality of flanged members rigidly



mounted on said base at right angles thereto, the flanges of said members being arranged in pairs and the flanges of each pair extending toward each other, a unitary section slidably supported between each pair of flanges, delivery mechanism mounted on each section, each section and its delivery mechanism being removable from said framework independently of the other sections and their delivery mechanisms, and means for locking said sections in place on said framework.

1,385,823. SPACING-BLOCK. CHARLES GRANT, San Francisco, Calif. Filed Sept. 23, 1920. Serial No. 412,304. 2 Claims. (Cl. 25—131.)

1. A spacing block for concrete forms comprising an elongated block adapted to be interposed between the forms to maintain a predetermined spacing between the same, and a spike-like projection in the block adapted to enter the form to secure the block in position.

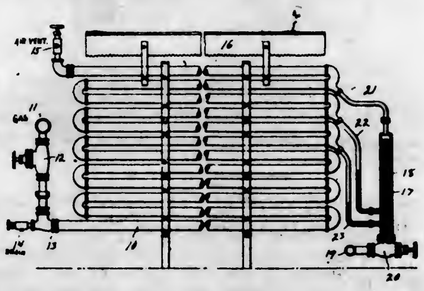


1,385,824. MOUNTED PRINTING-PLATE. HORACE W. HACKER, Chicago, Ill. Filed Dec. 30, 1920. Serial No. 434,078. 4 Claims. (Cl. 101—382.)

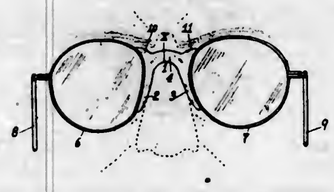
3. The combination with a printing plate; of a wooden mounting block for and assembling with the printing plate, said block being formed with holes distributed throughout the block and directed to cross and sever the grain thereof.

1,385,825. DRIFT-COMPENSATING DEVICE. CHALMERS G. HALL, Washington, D. C. Filed Feb. 17, 1921. Serial No. 445,658. 5 Claims. (Cl. 244—29.)

1. In combination with an aircraft, a rudder, a compass having a movable lubber line, transmission means to move said lubber line an amount proportional to the movement of said rudder, means to vary the proportionate movement between the lubber line and the rudder consisting of a variable throw-regulating element, and means for adjusting the last named element embodying a setting member, and means to shift said setting member.

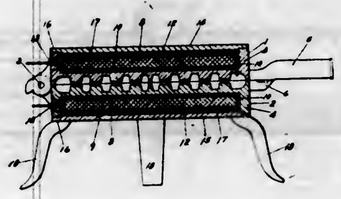


1,385,826. PROCESS FOR PRODUCING DENSE ABSORBENT CHARCOAL. LEE F. HAWLEY, Madison, Wis., assignor to United States of America. Filed Apr. 3, 1919. Serial No. 287,315. 5 Claims. (Cl. 127—2.)



1. The process of making charcoal having a specific gravity of at least .95 from wood which comprises comminuting wood, forming blocks of the comminuted wood, subjecting the blocks to a pressure of at least 30,000 pounds to the square inch, and distilling the blocks under a substantially constant directly applied mechanical pressure of at least 100 pounds per inch.

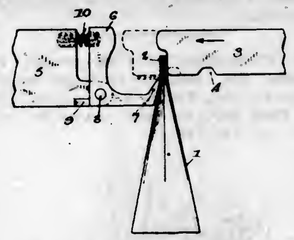
1,385,827. CONDENSER. NICOLAI H. HILLER, Carbondale, Pa. Filed Sept. 28, 1920. Serial No. 413,286. 5 Claims. (Cl. 257—42.)



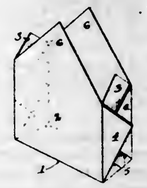
1. An upflow condenser for readily liquefiable gases including a conduit having an inlet at the lower end an air purge outlet at the upper end, means for flowing a cooling liquid in heat interchanging relationship to said conduit, a receiver for the liquefied gas, having a draw off from the upper portion thereof, and a plurality of liquid outlet connections along the path of the conduit to points at different elevations in said receiver, the liquid outlet nearest to the inlet of said conduit entering the receiver at the greatest depth below the liquid level in the latter.

1,385,828. EYEGLASS-MOUNTING. CHARLES L. HOGUE, Oakland, Calif. Filed Feb. 12, 1920. Serial No. 358,055. 3 Claims. (Cl. 88—43.)

1. A bridge for eyeglasses comprising spaced and elongated downwardly-extending nose rests connected by a transverse portion at their upper ends, the outer sides of each of said nose rests being adapted to be secured to lens mounts, and means on the bridge to engage under the eye socket of each eye to prevent an upward movement of the glasses.



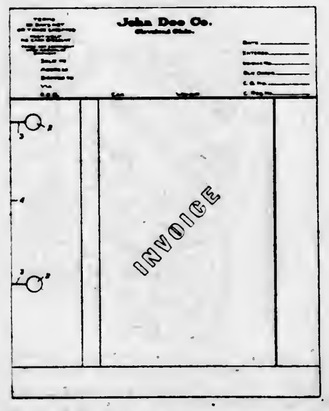
1,385,829. WAFFLE-MOLD. WILLIE L. HOLBROOK, Seaside, Oreg.; Margaret Holbrook, administratrix of said Willie L. Holbrook, deceased, assignor to John W. Henry, Portland, Oreg. Filed Jan. 22, 1920. Serial No. 353,254. 4 Claims. (Cl. 219—19.)



1. In a cooking utensil, the combination with a plurality of mold members in operatively separable relationship one to another, and each provided, in operative proximity to its outside edge, with an integral wall affording storage for heat and defining a recess on the outside of each mold member, of an electric heating element operatively incased within each of said recesses.

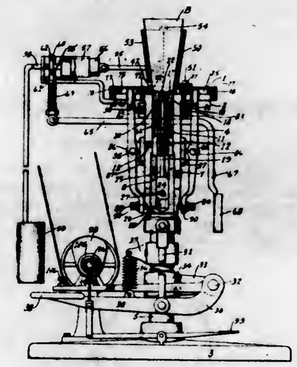
1,385,830. METHOD OF FORMING CLOSURES OF SEALED RECEPTACLES. EDWIN F. HULBERT, Milwaukee, Wis., assignor to Jiffy Dessert Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Oct. 4, 1919. Serial No. 328,576. 6 Claims. (Cl. 226—56.)

1. The method of closing a sealed receptacle composed of a single sheet of material, which consists in folding the free margins of the mouth thereof upon themselves so as to form a sharply acute angle, pressing the same hard so that they will retain their position and corrugating portions of the free marginal ends and the upper portion of the bag adjoining the mouth thereof into intimate contact.



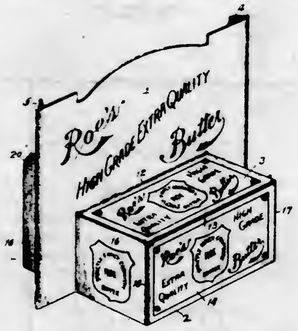
1,385,831. SEALED RECEPTACLE. EDWIN F. HULBERT, Milwaukee, Wis., assignor to Jiffy Dessert Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Oct. 4, 1919. Serial No. 328,604. 1 Claim. (Cl. 229—62.)

A smooth sided sealed receptacle formed from a single square sheet of material, the bottom being laid out upon the diagonal thereof, all of the corners of the sheet being brought to points above the mouth of the receptacle, the receptacle being formed, closed, and sealed by then folding the free edges into sharply acute angles and making sealing corners by the intimate contact thereof.



1,385,832. MANIFOLD-FORM SHEET. LELAND INGERSOLL, Cleveland, Ohio, assignor to The A. S. Gilman Printing Co., Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 13, 1919. Serial No. 317,248. 1 Claim. (Cl. 129—1.)

A manifold form sheet provided with a comparatively large circular perforation adapted to receive a filing post

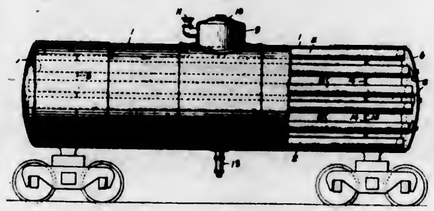


and located adjacent to one edge of the sheet, and a single line of perforations extending straight from the nearest edge of said enlarged perforation to the adjacent edge of the sheet.

1,385,833. EXPANDING DIE. MAXIMILLIAN P. JANISCH, Milwaukee, Wis., assignor, by mesne assignments, to Sealright Co., Inc., Fulton, N. Y., a Corporation of New York. Filed Sept. 18, 1916. Serial No. 120,592. 15 Claims. (Cl. 113—18.)

1. Apparatus for attaching mouth pieces to paper bottles, including the combination of a bottle holder adapted to fit the conically tapered sides of the bottles and to support them in an inverted position, an annular set of expanding die members, a tapered spreading mandrel operative within the circle of the die members to spread the latter, an annular series of inwardly movable clamping members adapted to engage and hold a mouth piece exteriorly during a die expanding operation, and means for simultaneously actuating the spreading mandrel and clamping members, said die members having outer faces expanding upwardly in conformity to the cone face of the inner surface of the bottle.

1,385,834. DISPLAY DEVICE AND METHOD OF FORMING SAME. CHARLES B. KELLOGG, Chicago, Ill., assignor of one-half to Eugene U. Knight, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,109. 6 Claims. (Cl. 40—126.)



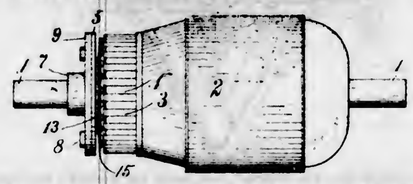
1. A display device comprising a back portion having angularly and rearwardly bent side wings provided with locking extensions, a forwardly extending base portion having a top and rearwardly bent side wings, said last mentioned wings extending back of said back portion and having means coöperating with said locking extensions to lock the parts together.

1,385,835. NUMBERING-HEAD. MAXIMILIAN H. KERN, New York, N. Y., assignor to Roberts Numbering Machine Company, a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,237. 4 Claims. (Cl. 101—85.)

1. A numbering head embodying therein a frame, a plurality of printing wheels rotatably mounted in said frame, each of said wheels having a ratchet wheel rotatable therewith, a detent pawl coöperating with each ratchet wheel, a spring having one end thereof supported upon said frame and the other end thereof engaging a pawl, and means coöperating with said frame and applying a constant tensioning pressure to said spring intermediate said point of support and said point of engagement thereof with the pawl.

1,385,836. CYLINDER-CAR. ARTHUR NEAL KERR, Pittsburgh, Pa., assignor, by mesne assignments, to Transcontinental Oil Company, Pittsburgh, Pa., a Corporation of Delaware. Filed June 11, 1917. Serial No. 174,041. 3 Claims. (Cl. 220—1.)

3. A vehicle body for transporting liquids having a high vapor tension, comprising a horizontal tubular metal shell, heads tightly closing the ends of said shell, vertical frames within said shell, liquid-containing tubes mounted in said frames and attached to one of them and provided at one end with filling connections, one of the heads of said shell being provided with apertures adjacent to the filling connections of the liquid-containing tubes and closures for tightly closing said apertures, said filling connections being accessible from the outside of said shell through said apertures when said closures are removed.

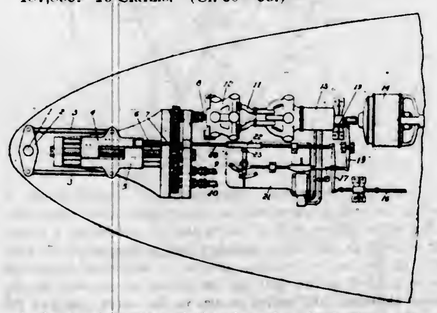


1,385,837. CLOTHESLINE-CLAMP. HERMAN KISTNER, Elizabeth, N. J. Filed Nov. 4, 1918. Serial No. 260,958. 1 Claim. (Cl. 24—134.)

A clothes line clamp consisting of a solid body having an angular and tubular bore through it, a guide-way provided with a contracted and an enlarged portion communicating with said bore, and an eccentric grip pivoted therein, said guide-way and eccentric grip being of less width than the said angular bore, said eccentric grip being provided in its periphery with a grooved portion provided with corru-

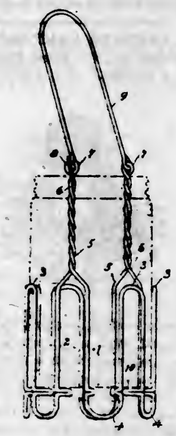
gations, means for engaging and releasing the same from a clothes line, and means formed in the body of the clamp, whereby it may be suitably attached or suspended.

1,385,838. SHORT-CIRCUITING MECHANISM. GEORGE H. LELAND, Dayton, Ohio. Filed June 16, 1919. Serial No. 304,439. 10 Claims. (Cl. 172—279.)



8. In a short circuiting mechanism for a single-phase alternating current motor, and in combination with the armature and commutator thereof, a short circuiting element adapted to be rotated into and out of operative relation with said commutator, and means controlled by centrifugal force to rotate said short circuiting element.

1,385,839. TWO-PIECE WATCH-CASING. LOUIS LEWITT, Brooklyn, N. Y. Filed Mar. 5, 1921. Serial No. 449,652. 2 Claims. (Cl. 58—88.)

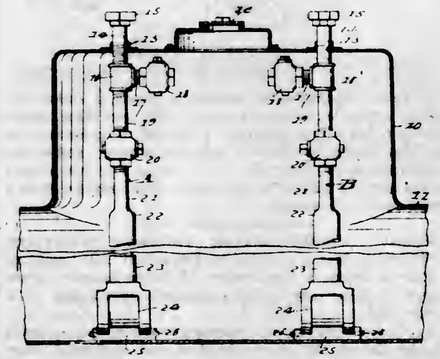


1. A casing for a watch-movement having a front with a crystal therein and a seat upon the inner side for the dial-plate of the movement, a body projected straight backward from the front to inclose the movement, a cover hinged to the rear of the body, and a locking-ring fitted to the rear part of the movement and to the inner side of the body at its rear edge.

1,385,840. STEERING-GEAR FOR SHIP'S. CHARLES M. MANLY, Buffalo, N. Y. Filed Aug. 23, 1917. Serial No. 187,895. 19 Claims. (Cl. 60—53.)

1. In a mechanism of the class described, the combination of a driving member and a driven member, and means for controlling the said driving member to prevent the speed of said driven member being accelerated at a rate sufficient to overload the driving member beyond a predetermined horse power.

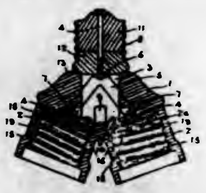
1,385,841. HOLDER FOR FRUIT-JARS. THOMAS G. MELISH, Cincinnati, Ohio. Filed Apr. 17, 1919. Serial No. 290,776. 3 Claims. (Cl. 53—1.)



1. A holder for jars comprising a wire frame bent to form vertical loops, top and foot members and jar supporting members intermediate the length of certain of the vertical portions of said loops, all portions of each of said jar supporting members being in the same vertical plane with the vertical loop portion in which it is formed.

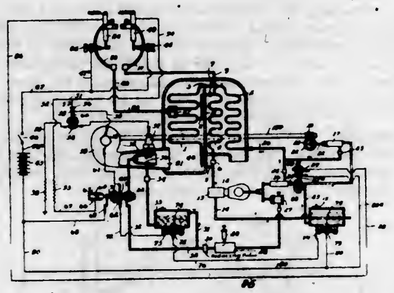
1,385,842. PROCESS OF BREAD-MAKING. CURTIS J. PATTERSON, Kansas City, Mo., assignor to The Campbell Baking Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 30, 1921. Serial No. 457,086. 2 Claims. (Cl. 99—10.)

1. The step in the process of making bread which consists in incorporating with the flour and other ingredients of the dough batch, peroxid in such quantities as will increase the moisture capacity of the dough batch above the normal without breaking down the gluten in the flour, such peroxid being non-toxic to permit its use in a food product.



1,385,843. DEVICE FOR LOADING GASOLENE IN TANK-CARS. THOMAS N. RUTHERFORD and EMETT H. RUDOLPH, Oilton, Okla. Filed Dec. 23, 1919. Serial No. 347,009. 3 Claims. (Cl. 220—86.)

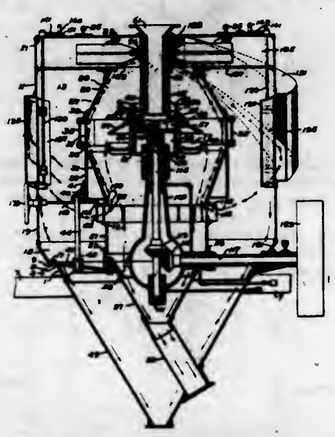
1. A filling apparatus for gasolene tank cars adapted for arrangement in the dome of such car adjacent to the center plug and consisting of a pipe disposed in an upright



position with its inlet above the top of the dome and its outlet adjacent to the bottom of the car, said pipe being provided at an intermediate point with a cut-off stop cock and above the plane thereof and also in communication with the filling pipe with an outlet stop cock.

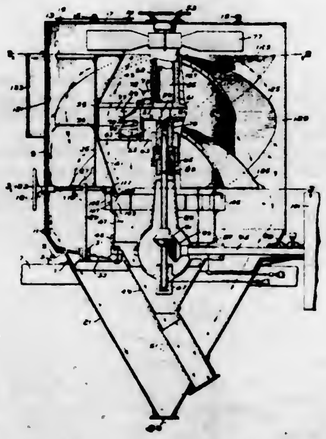
1,385,844. CLUSTER LAMP-SOCKET. EDWARD G. SCHATTLE, Auburn, N. Y. Filed July 29, 1919. Serial No. 314,094. 2 Claims. (Cl. 173—335.)

1. A cluster lamp socket, comprising, a unitary molded body portion formed with a plurality of socket openings connected at the inner ends with a recess opening through the top, a unitary metal member arranged in said recess having branch arms extending to each of said sockets, a threaded plug shell having a connection member rigidly secured thereto and extending into the recess in said body, socket shells arranged in said socket recesses and rigidly connected to the member secured to said plug shell, a plug arranged in said plug shell recessed to receive the plug shell connection, an electrical connection extending centrally through said plug and secured to the unitary metal member, and central socket contacts secured in the extremities of the arms of the unitary member.



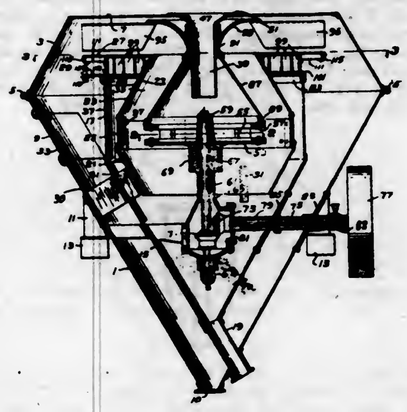
1,385,845. STEAM-GENERATING SYSTEM. LEWIS L. SCOTT, St. Louis, Mo., assignor to Standard Engineering Company, St. Louis, Mo., a Corporation. Filed Feb. 8, 1918. Serial No. 216,024. 30 Claims. (Cl. 122—448.)

1. In an apparatus for generating steam, a steam generator, means for supplying liquid to the generator, means for supplying a fuel mixture for heating the generator, an electrical device for igniting said fuel mixture, and means for initiating the functions of the liquid and fuel supply means and the device for igniting the fuel mixture from a single source of control.



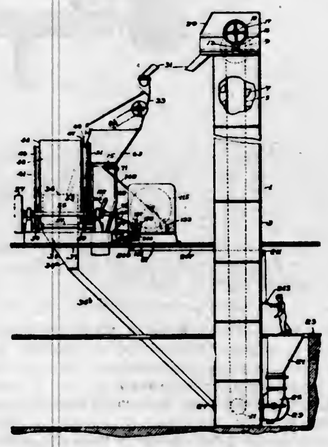
1,385,846. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1919. Serial No. 329,094. 20 Claims. (Cl. 83—40.)

1. An air separator, comprising in combination, a casing having therein an inner chamber and a divided outer chamber communicating with the inner chamber, a fan in one of the divided outer chambers for circulating the air current up through the inner chamber, means to introduce materials to be graded into the inner chamber in the path of said air current, and spiral guide means leading from the fan containing chamber to the other outer chamber to direct the air current from the fan into the latter cham-



ber while the air current continues its general whirling direction, thereby to produce centrifugal force to throw the particles within the air current outward away from the air entrance to the inner chamber.

1,385,847. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1919. Serial No. 338,622. 6 Claims. (Cl. 83—40.)



2. An air separator, comprising, in combination, a casing having communicating outer and inner chambers, a fan in the upper part of the casing for producing a rising air current in the inner chamber and a downward air current in the outer chamber, means to introduce materials to be graded in the path of the rising air current in the inner chamber, and spiral means in the outer chamber for directing the whirling air current produced by the fan downward within the outer chamber, thereby to throw the lighter particles by centrifugal force away from the communication between the chambers, said spiral guide means having their upper ends positioned in close proximity to the fan.

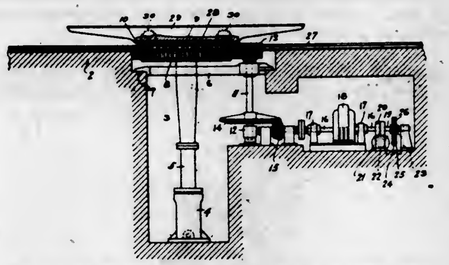
1,385,848. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 14, 1920. Serial No. 351,403. 10 Claims. (Cl. 83—40.)

1. An air separator for grading materials, comprising, in combination, a casing having outer and inner chambers therein, a fan for causing an air current to circulate through said chambers, means to introduce materials to be graded in the path of the air current, said chambers having an opening between them, valve means for controlling the passage of air through said opening comprising a pair of relatively movable supports, a series of vanes pivotally mounted on the movable support, a series of links pivotally connected to said vanes and the other support, and means to adjust the vane carrying support bodily to move the vanes and vary the opening afforded thereby.

1,385,849. MACHINE FOR MIXING MATERIALS. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1921. Serial No. 453,282. 38 Claims. (Cl. 83—73.)

1. A machine of the character described, comprising, in combination, a rotary mixer having elements therein for mixing materials, a fixed chute in said mixer, valve means movable to admit materials into the mixer and movable to deliver materials from the fixed chute out of the mixer, and means automatically to move said valve means to said positions.

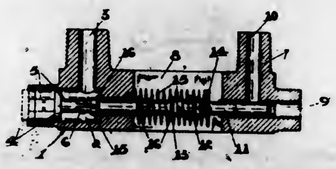
1,385,850. RAILWAY-BRAKE HANGER. J. MILLS SUMMERS, Pittsburgh, Pa. Filed Feb. 24, 1920. Serial No. 360,590. 6 Claims. (Cl. 188—211.)



1. A railway brake hanger comprising spaced side arms of a predetermined cross sectional area, and a transverse arm formed integral with and connecting said side arms, said transverse arm being formed of a substantially enlarged cross sectional area forming the entire bends of the hanger and extending at substantially said enlarged cross sectional area into the aforesaid side arms.

1,385,851. RAILWAY BRAKE-HANGER. J. MILLS SUMMERS, Pittsburgh, Pa. Filed Feb. 24, 1920. Serial No. 417,733. 8 Claims. (Cl. 188—215.)

1. A railway brake hanger comprising spaced side arms and an integrally ribbed beam section connecting the side arms, said beam section having relatively large upper and lower curved bearing surfaces for supporting a brake head.

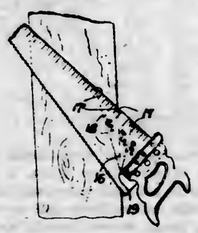


1,385,852. MECHANISM FOR SHIFTING PLATE-GLASS-GRINDING TABLES. FRANK E. TROUTMAN, Butler, Pa. Filed Feb. 13, 1920. Serial No. 358,332. 1 Claim. (Cl. 51—240.)

In apparatus for shifting plate glass grinding tables, the combination of a suitable track, a grinding table, wheels on said table adapted to engage said track, means for disengaging said wheels from said track, a high-power electric motor, a shaft driven thereby at relatively high speed, connections between said shaft and said table for rotating same, a low power electric motor, a shaft driven thereby at relatively low speed, and a magnetic clutch

between said first-named shaft and said last-named shaft, said clutch being energized when said low power motor is started, whereby when said low-power motor is put into operation said magnetic clutch is automatically operated to connect said shafts when said first-named motor is idle.

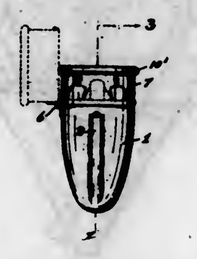
1,385,853. AUTOMATIC GAS-VALVE FOR WATER-HEATERS. FREDERICK W. WARNER, Toronto, Ontario, Canada. Filed Oct. 1, 1919. Serial No. 327,657. 3 Claims. (Cl. 236—25.)



2. An automatic valve comprising oppositely disposed casings a restricted web connecting said casings, one of said casings formed with a cylindrical chamber and inlet and outlet waterways, the other casing formed with gas inlet and outlet passages, a piston movable by water flow through the waterways and being fitted to slide freely in the cylindrical chamber, a piston rod secured to said piston and passing through the inner end of the chamber, a plunger longitudinally slidable in the gas outlet passage, a hinge joint coupling connection between said piston rod and plunger, a washer arranged on said plunger, a spring encircling the connected ends of said piston rod and plunger and having one end connected to said washer, and the opposite end of said spring adapted for engagement with the first mentioned casing adjacent the web of the valve.

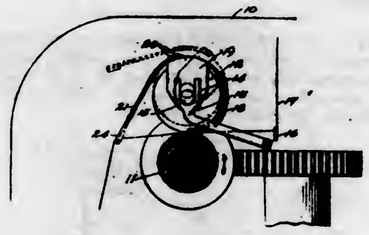
1,385,854. PROCESS OF WATERPROOFING. WALTER ALEXANDER, New York, N. Y. Filed Sept. 4, 1918. Serial No. 252,585. 18 Claims. (Cl. 91—70.)

6. In the process of waterproofing a fluid-penetrable body, the steps consisting in simultaneously applying in substantially fluid form two components adapted separately to penetrate said body and to interact within the body to form a waterproofing compound and thereafter promoting the interaction.



10. In the process of waterproofing, the improvement which consists in applying the two components of the effective waterproofing compound one of which contains a metal adapted to produce a water-repellent metallic soap, and the other of which contains an organic acid adapted to produce with a heavy metal a water-repellent soap simultaneously in aqueous dispersion and in substantially fluid form and thereafter causing the fixation of them together with the body to be waterproofed by action of a suitable electrolyte.

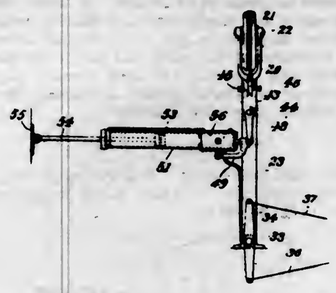
1,385,855. COMBINATION-SAW. EDWARD BALOD, New York, N. Y. Filed Jan. 25, 1921. Serial No. 439,722. 4 Claims. (Cl. 7—13.)



1. A tool involving a saw blade, a handle affixed thereto and provided with a lateral surface at right angles to the rear edge of the blade, and a line upon a face of the blade forming one face of an angle extending from a point on the rear edge of the blade to the lower corner of the handle.

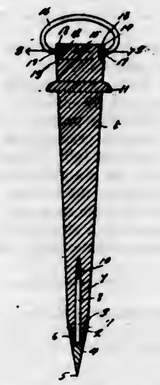
1,385,856. POWDER AND ROUGE CONTAINER. ROBERT Y. BARROWS, Rutherford, N. J., assignor, by direct and mesne assignments, of one-half to George H. Harman, Inc., a Corporation of New Jersey, and one-half to Robert Y. Barrows, Inc., a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,383. 6 Claims. (Cl. 132—83.)

1. A container for powder and rouge compacts providing a single vertical compartment, means for retaining the compacts in central vertical back to back disposition within said compartment, and spaced from the side walls thereof to provide vertical puff receiving spaces adjacent to each compact.



1,385,857. STOP-MOTION FOR TWISTING-MACHINES. ALFRED BLOSS BELHUMEUR, Woonsocket, R. I. Filed Oct. 27, 1920. Serial No. 420,006. 2 Claims. (Cl. 19—25.)

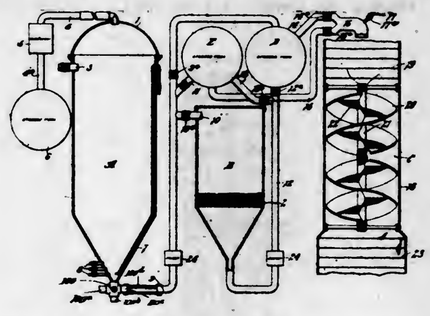
1. In a machine of the kind described, having a fixed lower roll and an upper roll journaled for vertical movement to and from the lower roll, a lifting device for the upper roll consisting of an arcuate plate provided with inwardly extending ears journaled on the upper roll, and an arm attached to said arcuate plate and provided with an eye at its free end, said arm and plate being arranged to lie on opposite sides of said roll.



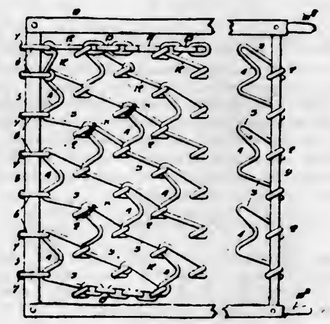
1,385,858. CONTROL FOR AERIAL MACHINES. ARTHUR F. BLASIAR, Guilford, N. Y., assignor, by mesne assignments, of forty-nine per cent. to William Bohleber, New York, N. Y. Filed Apr. 20, 1917. Serial No. 163,361. Renewed June 14, 1921. Serial No. 477,602. 14 Claims. (Cl. 244—29.)

8. A control for flying machines comprising an actuating means provided with valve mechanism thereon, in combination with means connected to a part of the machine to be controlled and adapted to be actuated by the actuating means, manually movable means for actuating said valve mechanism, and means on said manual means

for operating said actuating means upon the failure of the operation of the automatic means.



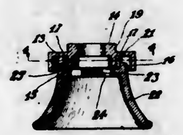
1,385,859. TETHERING PIN OR STAKE. BERNARD MCAULEY BRADFORD and JOSEPH FRANCES LE GERE, Hope Mills, N. C. Filed Feb. 21, 1918. Serial No. 218,595. 1 Claim. (Cl. 119—121.)



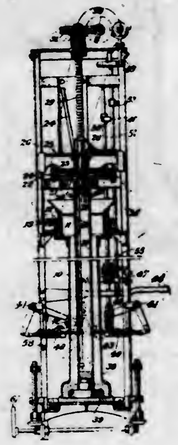
In a loop for a tethering pin, the combination with a tethering pin, the combination with a tethering pin body provided with a reduced cylindrical portion at one end, of a band fitting said reduced portion, means for securing the band to the reduced portion, said band having diametrically disposed openings, a semi-circular loop having its body portion concentric with the outer face of the band, thereby being equally spaced from said band throughout its length, the opposite ends of said loop being loosely fitted in said openings, said semicircular loop having its ends curved to its pivotal point whereby as an animal walks around the tethering pin a line secured to said loop will slide from one end of the loop to the other and pivot the lop from one side to the other thereby preventing the tethering line from becoming wound around the tethering pin.

1,385,860. APPARATUS FOR MAKING MOTOR-FUELS. WILLIAM E. CHENOT, Belleville, Ill. Filed Feb. 26, 1917. Serial No. 151,055. 3 Claims. (Cl. 259—9.)

1. In an apparatus for making motor fuels, a saturator comprising a vertically-disposed, tubular shell adapted to have liquid introduced into the upper end of same, a plurality of rotatable devices in said shell arranged one above the other and provided with spiral blades so that said devices will be revolved in opposite directions by the passage of the liquid through the shell, and screens arranged so that the liquid will pass through same before striking said rotatable devices.

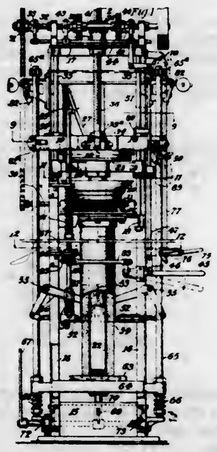


1,385,861. HARROW. JAMES YOUNG MCLACHLANE COMRIE, Runciman, Auckland, New Zealand. Filed Apr. 2, 1920. Serial No. 370,854. 4 Claims. (Cl. 55—32.)



1. A harrow composed of sections, having tines projecting therefrom; springs at the upper ends of the tines; arms approximately parallel to each other extending forward from said springs; and rearwardly bent cross portions connecting said arms.

1,385,862. TELEPHONE-MOUTHPIECE. VAN CONOMOS, Blairsville, Pa. Filed May 25, 1921. Serial No. 472,332. 4 Claims. (Cl. 179—187.)



1. A mouthpiece for telephones, comprising a holder provided with transmitter engaging means, spaced flanges extending from said holder to form an annular groove, securing means outwardly extending from one of said flanges, and a flexible mouthpiece having its end projecting into said annular groove and detachably engaged with said securing means.

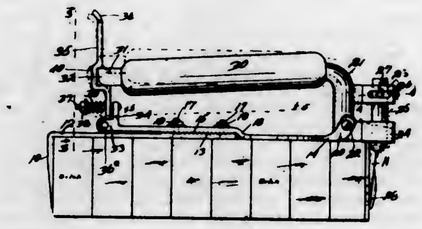
1,385,863. METHOD AND MACHINE FOR MAKING CEMENTITIOUS PRODUCTS. ALFRED OWEN CROZIER, New York, N. Y. Filed Apr. 12, 1920. Serial No. 373,064. 33 Claims. (Cl. 25—30.)

1. In a machine for making hollow concrete articles, in combination, an element comprising an upright hollow shaft like member or container for an unset cementitious column, an element comprising a core arranged vertically in said sleeve like member whereby the cementitious column is given a tubular form, means for raising and lowering one of said elements relatively to the column; means for rotating one of said elements relatively to the column for troweling the surface thereof; and means for severing the lower portion of the column.

1,385,864. MACHINE AND METHOD OF MAKING CEMENTITIOUS PRODUCTS. ALFRED OWEN CROZIER, New York, N. Y. Filed Apr. 12, 1920. Serial No. 373,065. 14 Claims. (Cl. 25—30.)

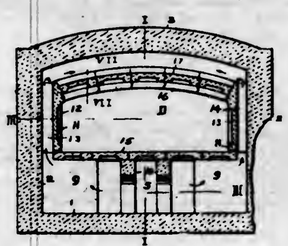
1. In a machine for making hollow concrete articles, in which such articles are formed by removing successive sections from the lower portion of an intermittently descending unset cementitious column of tubular form maintained between inner and outer upright elements, in combination, an outer shaft element, an inner core element, a pallet for supporting said tubular column of cementitious material, means for effecting a relative vertical movement of the pallet and one of the elements and concurrently lowering the other element to permit the descent of the tubular column, and means for severing the column after such descent.

1,385,865. BELT-BUCKLE. JOSEPH CZERWINSKI, Chicago, Ill. Filed Apr. 11, 1921. Serial No. 460,348. 6 Claims. (Cl. 24—191.)



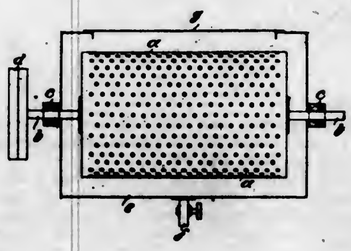
1. In a buckle, an elastic housing, a clamping lever pivotally mounted in said housing, and lugs on said housing yieldingly engaging said lever whereby the accidental displacement of said lever from clasping position is prevented.

1,385,866. PRODUCTION OF ACETONE BY DISTILLATION OF SODIUM ACETATE, &c. VIGGO DREWSEN, Brooklyn, N. Y. Filed Sept. 8, 1916. Serial No. 118,981. 8 Claims. (Cl. 23—24.)



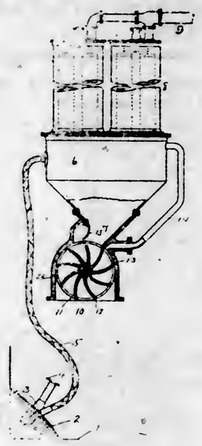
1. The process of distilling sodium acetate to produce acetone comprising melting crystallized sodium acetate and heating the same to about 100° C., incorporating therewith about one-third of its weight of powdered caustic magnesian lime to dehydrate the acetate to whitish powder and dry distilling the same at about 300° to 400° C. in the presence of superheated steam to secure a yield of acetone at least equaling substantially 95% of the theoretical yield.

1,385,867. BRICK-CARRIER. HARRY E. FULLER, Newhall, Iowa. Filed July 9, 1920. Serial No. 394,877. 3 Claims. (Cl. 294—62.)



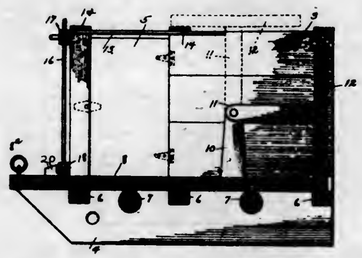
1. A brick carrier comprising a pair of brick engaging members, one of said members being pivoted relative to the other, said last brick engaging member being capable of slight pivotal movement on a vertical axis, a handle arranged above and between said members and mounted on one of said members, a latch device mounted on said last member adapted to engage one end of said handle for locking the brick engaging members against movement.

1,385,868. MUFFLE-LEER CONSTRUCTION. PAUL L. GEER, Bellevue borough, Pa., assignor to Amsler-Morton Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1919, Serial No. 340,468. Renewed Oct. 7, 1920. Serial No. 415,376. 20 Claims. (Cl. 263—41.)



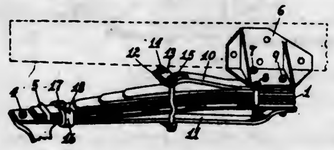
1. A muffle leer comprising an outer furnace structure, an elevated muffle mounted therein, a longitudinal crown flue above the muffle, a combustion chamber under the forward portion of the muffle, a reverberatory chamber under the rear portion of the muffle, a vertical wall separating said chambers, a baffle wall intersecting the crown flue above the reverberatory chamber, a series of vertical flues on either side of the muffle connecting the combustion chamber with the crown flue; a second series of vertical flues at either side of the muffle, and in rear of said first named flues, connecting the crown flue in front of the baffle wall with the reverberatory chamber, a third series of vertical flues, in the rear of said second named flues, connecting the reverberatory chamber with the crown flue in the rear of the baffle wall, and means for leading off the products of combustion from the rear end of the crown flue, whereby the products of combustion ascend from said combustion chamber about said muffle to the crown flue, thence descend from said crown flue about said muffle to said reverberatory chamber, and thence ascend from said reverberatory chamber about said muffle to the crown flue in the rear of said baffle wall.

1,385,869. REGENERATION OF OLD OR WASTE RUBBER. CONSTANTIN GEORGI, Zehlendorf, near Berlin, Germany, assignor to Vandivere B. Moler, Yonkers, N. Y. Filed July 6, 1920. Serial No. 394,398. 4 Claims. (Cl. 18—52.)



1. The method of treating old or waste rubber having incorporated fibrous material which consists in placing the rubber in its original condition in a closed vessel containing a solvent and moving the said waste rubber in the solvent at a moderate temperature under pressure so as to extract the rubber from the fibrous material.

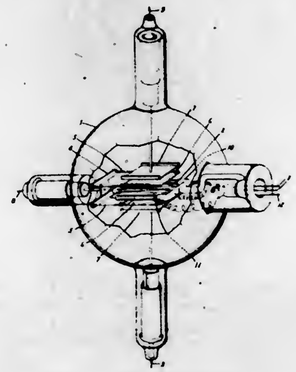
1,385,870. PNEUMATIC CONVEYING. GEORGE A. GIESELER, Cleveland, Ohio. Filed July 5, 1919. Serial No. 308,725. 4 Claims. (Cl. 130—17.)



2. In a pneumatic conveying device, a receiver for material having an outlet, a rotary air lock at the outlet for delivering material, and a spring in the outlet coöperating with the lock to handle such irregularities as lumps.

1,385,871. HOG-BOX. ALFRED HIDY, Jeffersonville, Ohio, assignor of one-half to John H. Hidy, Urbana, Ohio. Filed Oct. 27, 1919. Serial No. 333,444. 2 Claims. (Cl. 119—99.)

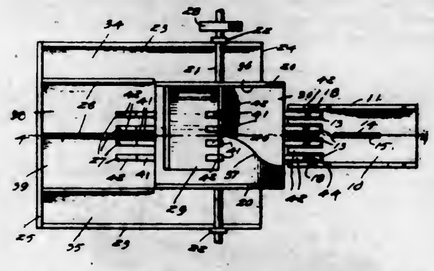
1. In a structure of the character described, a floor, side walls, a top partially covering said structure but leaving the rear thereof open, and a pivoted end gate arranged to swing upwardly and aline itself with said top to close the open portion of said structure.



1,385,872. SHOCK-ABSORBER. HOUSTON P. HOOD, San Francisco, Calif. Filed July 19, 1920. Serial No. 397,411. 4 Claims. (Cl. 267—41.)

2. A cantaliver spring shock absorber comprising a cantaliver spring, a supplementary spring member rigidly

connected to the cantaliver spring at its thickest portion, and extending toward the thinner end of the cantaliver spring at a distance therefrom, a yoke bearing upon the supplementary spring to pass over the cantaliver spring, and means to hold the yoke in a fixed position with respect to the cantaliver spring.

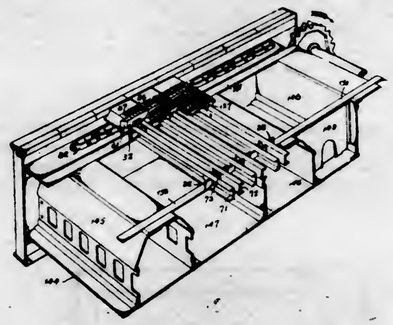


1,385,873. ELECTRON-DISCHARGE APPARATUS. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1916. Serial No. 101,729. 33 Claims. (Cl. 250—27.)

1. The combination in an apparatus of the class described of an evacuated receptacle containing an electron emitting cathode, an anode, a third electrode and a discharge controlling member, means for producing an emission of secondary electrons from the third electrode sufficient in value to produce a negative resistance characteristic between cathode and third electrode, and means for applying a variable potential to the discharge controlling member to vary the number of secondary electrons emitted from the third electrode.

13. The combination in an apparatus of the type described of an evacuated envelop having therein a discharge controlling member, a filamentary cathode, an anode and a third electrode, said anode being located between said third electrode and said cathode, and said cathode being located between said anode and said discharge controlling member.

1,385,874. PICK-UP AND SEPARATING MACHINE. GRANVILLE I. KOHR, York, Pa. Filed Mar. 16, 1920. Serial No. 366,442. 10 Claims. (Cl. 193—1.)

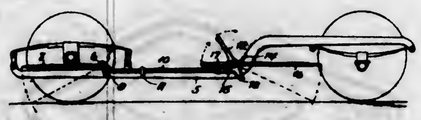


1. A pick-up and separating machine comprising a main feed chute, an operating table divided into separate compartments, means for picking up articles from said main feed chute, a solid rotatable drum, said last mentioned means being carried by said solid rotatable drum, said solid rotatable drum having pockets to receive said articles, said pockets having discharge openings to deliver said articles to the separate compartments of said operating table, and means for rotating said rotatable means.

1,385,875. BURNER. ALBERT R. KUNKEL, San Antonio, Tex. Filed Aug. 17, 1920. Serial No. 404,196. 3 Claims. (Cl. 158—63.)

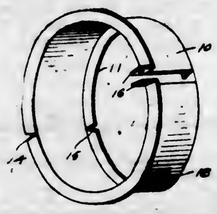
1. In an oil burner the combination with a gas generating portion, of a burner pipe below and connected thereto provided with an upwardly directed discharge opening, a drip pan secured in place and extending horizontally, below said burner pipe and having therein a pair of elongated air passages one on each side of the burner pipe opposite the discharge opening and flattened air tubes extending upwardly from said passages to a higher level than the burner pipe and curved toward each other at their upper ends so as to discharge sheets of air from opposite sides directly across the jet issuing from said burner opening.

1,385,876. TRAVELING GRATE. WILLIAM LLOYD, Hazleton, Pa., assignor to Coxe Traveling Grate Company, Port Carbon, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1918. Serial No. 213,784. 21 Claims. (Cl. 110—40.)



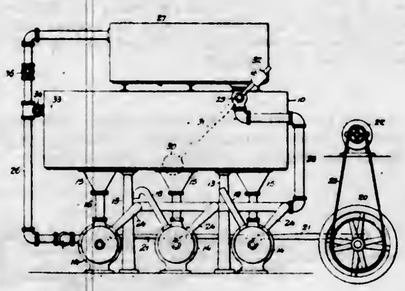
1. In a traveling grate, a grate bar having an end block, a bank of keys and an air seal key interposed between said end block and key bank.

10. In a traveling grate, a grate bar and a key bank supported thereon comprising as an element thereof a key having transverse channels in its fuel supporting surface, a web underlying the latter and recessed on opposite sides of the key to afford air passages, together with lateral studs alined with the channels in the fuel surface of the key and projecting into said air passages to prevent the direct flow of air into said channels.



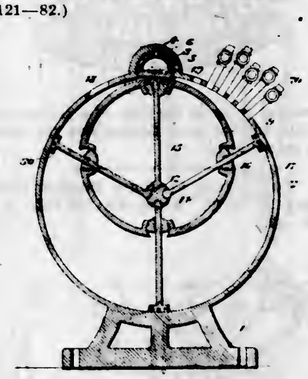
14. In a traveling grate, a grate bar having a structural metal mid-section for carrying a key bank, together with brackets secured to said mid-section and forming sealing ribs extending in the direction of the travel of the grate.

1,385,877. EMERGENCY-BRAKE FOR VEHICLES. CATHARINE LETTIE MCDONALD, Caldwell, Ohio. Filed Feb. 10, 1920. Serial No. 357,641. 4 Claims. (Cl. 188—6.)



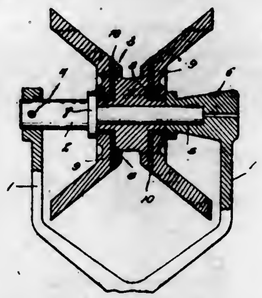
1. In an emergency brake for vehicles, the combination of the underframe of the vehicle, two shafts pivotally mounted thereon one having arms projecting forwardly and the other having arms projecting rearwardly the free ends of said arms adapted when in operative position to engage the road bed and act as a chock for the vehicle, and independent means for actuating the said shafts to lower and raise the said arms, the actuating means for the rear arms having a loose connection with the latter whereby said arms are free to trail and ride over the surface of road when the machine is moving forwardly.

1,385,878. CLAMP-BELT GUIDE. JOHN MARTIN, Amorita, Okla. Filed Feb. 17, 1921. Serial No. 445,725. 2 Claims. (Cl. 64—17.)



1. A belt guide clamp for drive pulleys having a band provided at its opposite side edges with inwardly and outwardly directed flanges, split to permit of conforming to the contour of the pulley, the exterior flange having terminal deflected wings for engagement by a securing bolt.

1,385,879. WAVE-MOTOR. SHAVERKSHA D. MASTER, Bombay, India. Filed Dec. 18, 1920. Serial No. 431,638. 3 Claims. (Cl. 61—20.)

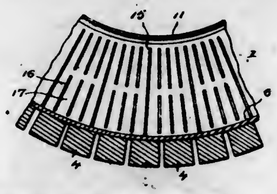


1. A wave motor comprising a main water supply tank, valve controlled water inlets therefor, spaced parallel rows of turbines communicating with said tank and with each other, parallel reciprocating rods connecting said turbines, an auxiliary tank, pipes for conveying water from one row of turbines to said auxiliary tank, valve controlling said communication, and valve controlled means for conveying water from the auxiliary tank to the adjacent row of said turbines.

1,385,880. ROTARY ENGINE. SHAVERKSHA D. MASTER, Bombay, India. Filed July 11, 1919, Serial No. 310,037. Renewed Dec. 27, 1920. Serial No. 433,427. 5 Claims. (Cl. 121—82.)

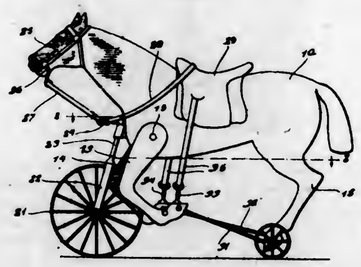
1. In a rotary engine, the combination of a circular casing, a circular piston body disposed eccentrically in the casing, a housing in communication with the casing in close proximity to the perimeter of the piston body and having a filling aperture for lubricant, and an oscillatory hollow abutment opposed to the perimeter of the piston body and adapted to lubricate the same and having an aperture in registration with the first-named aperture.

1,385,881. TROLLEY-WHEEL. SHAVERKSHA D. MASTER, Bombay, India. Filed July 2, 1920, Serial No. 393,771. Renewed June 10, 1921. Serial No. 476,608. 1 Claim. (Cl. 191—76.)



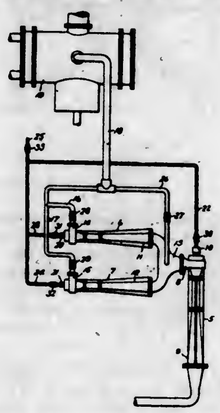
In combination with a trolley harp, a wheel having annular recesses in its sides, a pair of star-shaped replacer wheels having their hubs engaging said recesses, the spokes of the wheels inclining outwardly, an axle for supporting the trolley wheel and shoulders formed on the axle and harp for holding the replacer wheels on the trolley wheel.

1,385,882. TIRE. SHAVERKSHA D. MASTER, Bombay, India. Filed July 11, 1919, Serial No. 310,034. Renewed June 11, 1921. Serial No. 476,966. 3 Claims. (Cl. 152—16.)



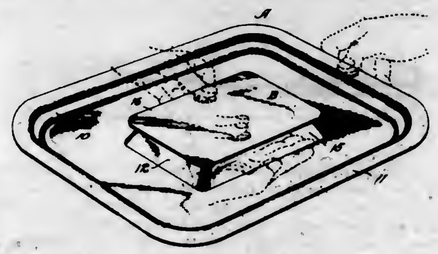
1. A tread member for tires comprising a metallic backing, and spaced apart metallic blocks arranged trans-

versely at the outer side of and fixed to said backing and each block having inturned flanges at its ends; the said



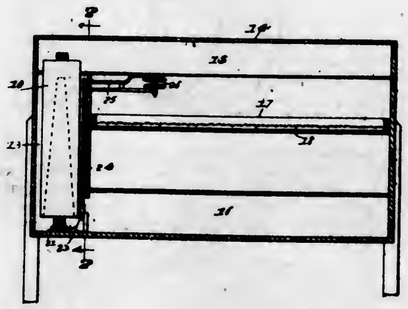
metallic backing being in the form of a transeversely corrugated plate and therefore flexible, and the said flanges being also spaced apart.

1,385,883. TOY. DAVID FLETCHER MORGAN, Atlanta, Ga. Filed May 21, 1920. Serial No. 383,152. 4 Claims. (Cl. 208—42.)



1. In a device of the class described, a body portion, legs permanently connected therewith, rotatable elements on which said legs are mounted, pivoted legs connected with the body portion, means for imparting movement to the pivoted legs when the device is moved forwardly over the surface of the ground, and a guiding device connected with said body portion, and resilient means for restoring the guiding device to normal position when operated.

1,385,884. EJECTOR-FLUID-PUMP. SANFORD A. MOSS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 8, 1919. Serial No. 329,378. 5 Claims. (Cl. 230—13.)



1. In an ejector fluid pump, a last stage ejector, and a plurality of earlier stage ejectors connected in parallel to each other and in series with said last stage ejector.

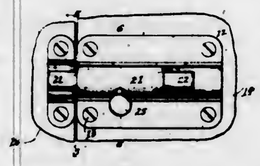
1,385,885. COIN-HANDLING DEVICE. JOHN BRUCE NORRIS, San Francisco, Calif. Filed May 3, 1920. Serial No. 378,472. 1 Claim. (Cl. 133—12.)

In a coin handling device, a tray having its marginal portion curved outwardly and upwardly and terminating in a relatively extensive outwardly directed flat horizontal portion, a stand fixed centrally on the tray and including side portions, and a continuous flat top fixed to the side portions and extending outwardly beyond the upper edges thereof.

1,385,886. HOT-WATER ELECTRIC INCUBATOR. JAMES L. NUNGESTER, Pocatello, Idaho, assignor to Nungester Hot Water Electric Incubator Company, a Corporation of Idaho. Filed Jan. 3, 1920. Serial No. 349,230. 4 Claims. (Cl. 219—19.)

1. A heating apparatus for the purpose indicated having a heating unit and a heat equalizing and distributing member defining a chamber housing the heating unit and having fluid contained walls interposed between said unit and the space to be heated.

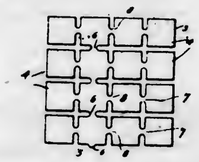
1,385,887. ELECTRIC RETOUCHER. VICENTE A. RACAZA, Cebu, Philippine Islands. Filed May 20, 1920. Serial No. 382,842. 4 Claims. (Cl. 95—101.)



1. An electric retoucher comprising a casing having open ends and offset intermediate portion, an electromagnet mounted in said offset intermediate portion and insulated from the casing, a cap for closing one end of said

casing, an armature to be attracted by said magnet, resilient supporting means for the armature carried by said cap, and a lead carrying member carried by said armature.

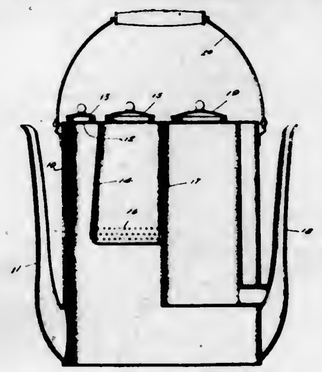
1,385,888. MANUFACTURE OF ACETONE. ELOI RICARD, Melle, France. Filed June 7, 1918. Serial No. 238,730. 5 Claims. (Cl. 23—24.)



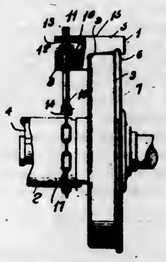
1. A process for the manufacture of acetone and butyl alcohol by fermentation of carbohydrate material wherein the wort is fermented by a bacillus existing in organic residual animal products, identified by its having the form of a cylindrical stick with a rounded end, by its dimensions, and by its property of rapid formation of spores.

1,385,889. LOCK. CHARLES B. ROBERTS, Berkeley, Calif. Filed Oct. 30, 1920. Serial No. 420,702. 2 Claims. (Cl. 292—57.)

1. In a door, the combination with a cylindrical keeper plate adapted for attachment to a door jamb, of a bolt including a main body portion having integrally formed therewith eccentrically mounted extremities, means secured to the door and adapted to receive said bolt therein, and a knob secured to said bolt and adapted upon rotary movement to cause one of the extremities thereof to contact with the inner periphery of said cylindrical keeper plate.



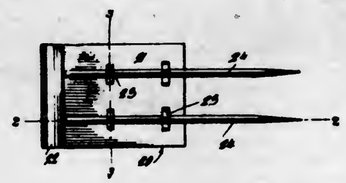
1,385,890. ARMOR-RELINER FOR TIRES. SEYMOUR A. ROUSE and HANS C. STOCKEL, Chicago, Ill. Filed Apr. 14, 1920. Serial No. 373,805. 2 Claims. (Cl.152—18.)



1. An armor for tires comprising a pad, plates embedded in said pad and each including rows of square disks, tongues connecting some of said disk longitudinally, tongues connecting other of said disks transversely, said tongues having their medial portions reduced in width so that when broken they will break at their medial portions and remain attached to the disks.

1,385,891. COFFEE-POT. BARNET RUBIN, Philadelphia, Pa. Filed June 13, 1921. Serial No. 477,239. 2 Claims. (Cl. 53—3.)

1. A coffee pot including a spout, a coffee receptacle arranged within the pot and having perforations, a milk receptacle arranged within the pot, a spout arranged at one side of the pot and communicating with the milk receptacles, and said coffee and milk receptacle being spaced from the wall of the pot for the purpose specified.

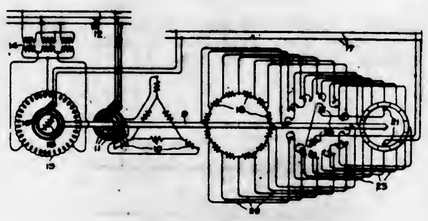


1,385,892. JOURNAL-BOX JACK. GUY W. RUTLEDGE, Huron, S. D. Filed Mar. 1, 1918. Serial No. 219,897. 3 Claims. (Cl. 254—83.)

1. A journal box jack comprising a bracket, a lifting member adjustably mounted in the bracket and operably and selectively extensible beyond opposite faces thereof, said bracket being reversible and one of the said faces being engageable with a car wheel and the other face being engageable with a support auxiliary to the car wheel.

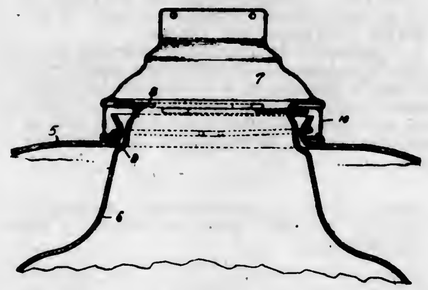
1,385,893. CANDY-LIFTER. GEORGE H. SCHMAND, Little Rock, Ark. Filed Jan. 10, 1920. Serial No. 350,604. 7 Claims. (Cl. 107—47.)

6. A candy handling device comprising a supporting member having a plurality of stirrups struck therefrom to removably receive a plurality of sticks or pins which are adapted to be permanently attached to candies.



7. A candy handling device comprising a flat plate having means for removably retaining a plurality of sticks in approximately the same plane therewith.

1,385,894. CONNECTING-ROD. EDWARD R. SCHNELLE, Pavo, Ga. Filed Dec. 16, 1919. Serial No. 345,358. 1 Claim. (Cl. 287—94.)

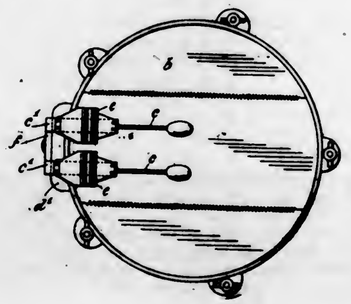


A connecting rod comprising a body, means at one end of the body to receive a wrist pin, a bearing section formed on the other end of the body and having an opening in one end, a movable bearing section having one end hinged to the first bearing section, a screw threaded rod slidably secured to the body and extending through the opening and pivoted to the free end of the movable bearing section, torsion and adjusting nuts threaded on said rod and the latter bearing against the first named section, a coil spring surrounding said rod and secured to the nuts and adapted to rotate the adjusting nut on said rod when wear occurs in the bearing sections, and means for locking the torsion nut against accidental rotation.

1,385,895. ELECTRICITY TRANSFORMING AND CONVERTING APPARATUS. CHARLES W. STONE and HENRY M. HOBART, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Sept. 6, 1916. Serial No. 118,636. 9 Claims. (Cl. 171—123.)

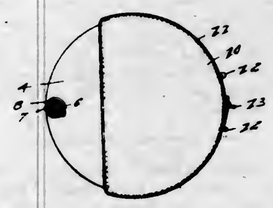
2. An electricity transforming and converting apparatus comprising a rotatable shaft, a phase multiplying transformer having primary and secondary windings, the secondary winding of said transformer being carried by said shaft, a commutator carried by said shaft, and electrically connected to the secondary winding of said transformer whereby said commutator and said secondary winding rotate as a unit, and independently energized means for rotating said shaft.

1,385,896. SHADE-HOLDER. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 16, 1920. Serial No. 366,298. 3 Claims. (Cl. 240—115.)



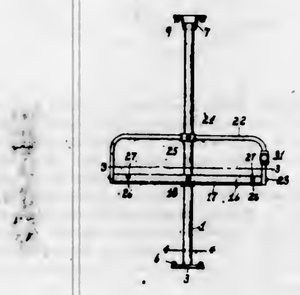
1. A shade holder comprising a plurality of spaced, contractile spring rings of substantially the same diameter, and reducing plates secured to one of said rings and projecting inwardly therefrom to afford a shade support of less diameter than the ring.

1,385,897. DEVICE FOR DECAPPING ARMOR-PIERCING SHELLS. TOLMIE JOHN TRESIDDER, Upper Norwood, London, England. Filed Nov. 19, 1918. Serial No. 263,215. 2 Claims. (Cl. 114—9.) (Granted under the provisions of the act of Mar. 3, 1921. 41 Stat. L., 1313.)



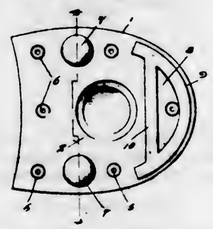
1. In a protective device, the combination of a face hardened plate of armor and a shell-decapping device secured over the face of said armor plate, said decapping device being of very tough and strong metal and being in the form of lattice work.

1,385,898. MUSICAL INSTRUMENT OPERATED BY PERCUSSION. VIOLET ANGYAL, Balham, London, England. Filed Dec. 15, 1919. Serial No. 344,960. 3 Claims. (Cl. 84—10.)



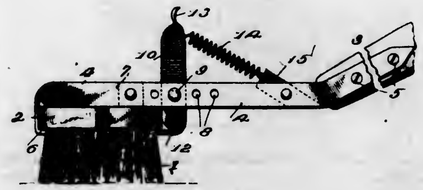
2. The combination with a musical instrument, of flexible percussive sticks for operating said instrument, said percussive sticks carrying means at their outer ends for striking said instrument and at their inner end being attached to inherently rigid resiliently mounted connecting-pieces, and means for operating said sticks.

1,385,899. STRAINER-STRETCHER. JOHN T. BARKER, Lexington, Ky. Filed Dec. 15, 1916. Serial No. 137,142. 1 Claim. (Cl. 24—256.)



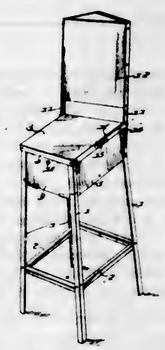
A stretcher for strainers for receptacles having a top of semi-circular form comprising a wire bent in semi-circular form with its free ends midway of the circular portion, a plurality of radially outward crimps on one of the ends and a socket for the crimps on the other end, the socket terminating in a radial projection.

1,385,900. BUNK. CHARLES J. BRAUN and CARL G. JANSON, Oakland, Calif. Filed July 19, 1920. Serial No. 397,434. 11 Claims. (Cl. 5—60.)



1. A bed of the character as disclosed including a single post at each end of the bed, a horizontal supporting member on each post, for supporting a mattress, and a U-shaped end rail coupled at its ends to the ends of each supporting member and secured to a post for holding the supporting member horizontally.

1,385,901. CUSHION-HEEL. ALFRED BUCOLO, Washington, D. C. Filed Mar. 11, 1921. Serial No. 451,465. 3 Claims. (Cl. 36—59.)

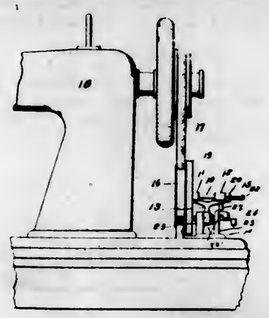


1. As a new article of manufacture, a cushion heel having in its underside a suction chamber closed at its top, and also having pendent projections spaced apart in front of the transverse median line of the heel, and an auxiliary suction chamber disposed in rear of the first-named suction chamber; the said auxiliary suction chamber being formed by pendent curvilinear and cross ribs, and the said projections and ribs being of a common height.

1,385,902. SCRUBBING-BRUSH HOLDER. THOMAS O. BUSSLER, Wheelersburg, Ohio, assignor of one-half to David Bussler, Wheelersburg, Ohio. Filed Apr. 6, 1921. Serial No. 459,036. 3 Claims. (Cl. 15—54.)

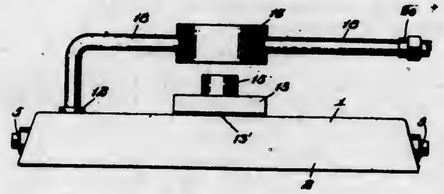
1. In a brush holder, a handle, a pair of arms projecting from said handle and terminating in downward extending hooks, a vertically disposed lever fulcrumed between said arms and having a downward projecting hooked extremity, and a spring anchored at one end to a fixed portion of the device and secured at the other end to said lever above its fulcrum point.

1,385,903. BENCH-STOOL. MARSHAL L. COCHRAN, Grand Rapids, Mich. Filed Mar. 26, 1918. Serial No. 224,849. 1 Claim. (Cl. 155—194.)



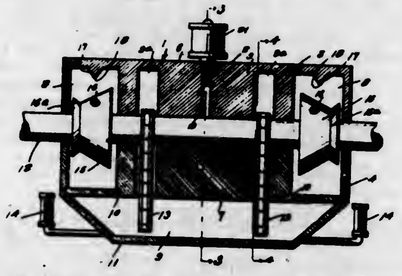
A device of the kind set forth comprising legs made from angle iron, angle iron braces interconnecting the legs near their bottom ends, a plate having depending flanges on its four edges, the plate resting on top of the legs and the flanges being attached thereto, plates positioned just below the aforesaid plate and connected between certain pairs of legs, a still further plate having upturned flanges by means of which it is connected to the latter plates, and a door plate hingedly connected to the last named plate and provided with means for locking engagement with one of the depending flanges of the first named plate.

1,385,904. SEWING-MACHINE ATTACHMENT. JACOB COHEN, Philadelphia, Pa. Filed Aug. 3, 1920. Serial No. 401,023. 2 Claims. (Cl. 51—256.)



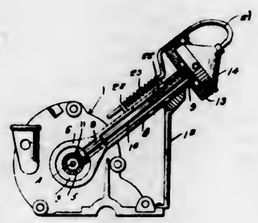
1. An attachment of the class described having a tool, a pulley applicable to a driving medium, a shaft mounting the tool and extending from the pulley, a base, a bracket

bearing for the shaft pivoted on the base, means to urge the bracket bearing away from said medium, and a latch



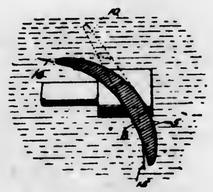
means on said base coöperating with the bracket bearing to maintain the pulley in engagement with said medium against the urgency of said means.

1,385,905. BURNER. LEMUEL P. COULTER, Tacoma, Wash. Filed Nov. 15, 1919. Serial No. 338,245. 2 Claims. (Cl. 158—64.)



1. In a hydro-carbon burner, a flanged base cast to provide a tube which extends centrally therethrough, means closing the ends of the base, a burner nozzle arranged centrally on the top of the tube and communicating with the bore thereof, the top of the base having a flanged opening surrounding the tube, an air mixer comprising a member arranged over the flange of the opening, spaced therefrom and from the top of the base, said member having a central opening surrounded by an outturned flange, a retort tube disposed above the base having an offset branch communicating with the tube in the base, and a flame spreader on the retort tube disposed directly above the air mixing member.

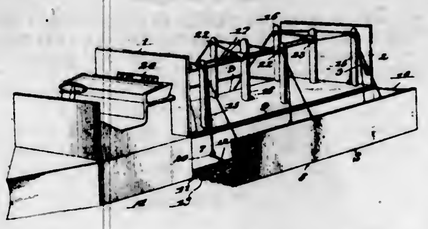
1,385,906. BEARING. EDWARD H. CRUTCHFIELD and ADOLPHUS F. COVERT, Detroit, Mich. Filed Dec. 12, 1919. Serial No. 344,290. 1 Claim. (Cl. 64—31.)



A self-lubricating shaft bearing, the same comprising a casing having an oil well therebelow and in communication therewith, and having end oil chambers above and in communication with the end portions of the said oil well, bearing blocks intermediate the end oil chambers, a shaft journaled in the bearing blocks and in the ends of the casing, means for feeding oil to the shaft from the oil well, transverse ribs at the tops of the end oil chambers forming reinforcements and oil stops, frusto-conical collars on the ends of the shafts in the plane of the respective ribs with their smaller ends facing outwardly, and inwardly flared drip stops at the outer ends of the frusto-conical collars.

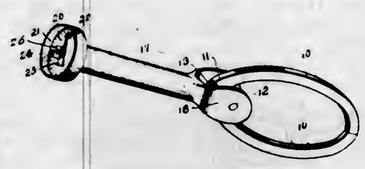
1,385,907. ENGINE-TIMER. PHILLIP J. DELL, Jr., Waycross, Ga., assignor to W. J. Gassett, Ware county, Ga. Filed July 8, 1919, Serial No. 309,413. Renewed Dec. 27, 1920. Serial No. 433,521. 1 Claim. (Cl. 123—146.5.)

An attachment for engines including a timing gear cover and a cam shaft, a housing formed on the cover, a tubular member formed on said housing, a timing shaft journaled in said tubular member and housing and connected to the cam shaft, an annular portion formed on the upper end of the tubular member, a timer shell mounted on said annular portion, a contact roller carried by the timing shaft and operating within the shell, spaced apertured lugs formed on the tubular member, a spring actuated locking rod mounted in said lugs and having its free end curved to engage the shell.



1,385,908. CYCLOID PROPELLER. HENRY H. C. DUNWOODY, Washington, D. C. Filed Nov. 28, 1919. Serial No. 341,049. 3 Claims. (Cl. 170—159.)

1. A propeller blade having a cross sectional area bounded by two cycloidal curves having different centers of curvature and different radii, substantially as described.



1,385,909. CONVERTIBLE VEHICLE-BODY. FRANK FAILLACE, New York, N. Y. Filed Mar. 15, 1920. Serial No. 365,942. 6 Claims. (Cl. 37—33.)

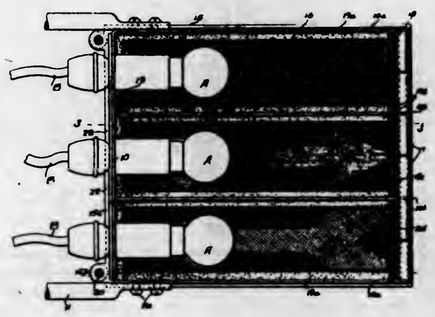
1. In a device as characterized, a platform, a structure embodying shiftable elements, each of said elements including relatively movable sections, the said elements being shiftable with respect to said platform to constitute a

hollow body therewith, and to constitute shovels at the sides and below said platform.

1,385,910. GRADUATED CALIPERS. GODFREY HUNSLEY FOX, Seattle, Wash. Filed July 20, 1920. Serial No. 397,686. 2 Claims. (Cl. 33—148.)

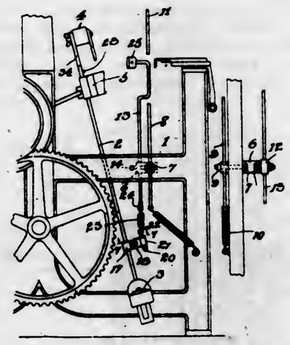
1. A caliper including two pivotally connected legs having their inner ends headed and provided with teeth, a pinion engaging the teeth, a spring influenced shaft for the pinion, a sleeve inclosing the shaft and having bearings for the pivot which connects the legs of the caliper.

1,385,911. COATING OF SHIP SCREW-SHAFTS. AUGUST FREESE, Dansig, Germany, assignor to Society "Freeses Patent" Eisenschutz und Schraubenwellenbekleidung fur Schiffe G. M. B. H., Charlottenburg, Germany. Filed Jan. 6, 1921. Serial No. 435,548. 1 Claim. (Cl. 134—52.)



A coating for ship screw shafts comprising a mixture of four parts of minium or red lead and one part of wood tar.

1,385,912. METHOD AND APPARATUS FOR USING DISSIMILAR FILMS. LEÓN GAUMONT, Paris, France. Filed July 24, 1920. Serial No. 398,735. 3 Claims. (Cl. 88—16.)

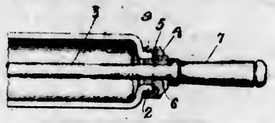


1. A method using related dissimilar films for projection, comprising feeding said films, through appropriate projection machines, controlling the feed of said films so that they have a definite speed relation, and providing each film with opaque portions for a length corresponding to the transparent portion of the other film, whereby the sequence of projections from the films is continuous.

1,385,913. AUTOMOBILE-SIGNAL CASING. SAMUEL GOLDSTEIN, New York, N. Y. Filed Dec. 27, 1920. Serial No. 433,363. 4 Claims. (Cl. 40—132.)

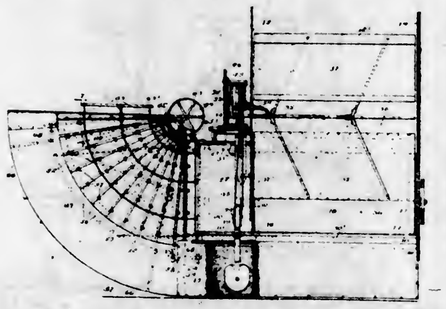
2. An automobile signal casing convergent toward one end and including a frame unit in said casing presenting spaced approximately parallel arms tapering toward said end of the casing to divide the casing into compartments, as well as sides hinged to said frame unit at said end, and bracing and spacing members on said frame unit between the arms thereof at said end and curved transversely into conformity with the hinge means.

1,385,914. FILLING OR THREAD HOLDER FOR LOOMS. GROVER CLEVELAND HARALSON and WILLIAM ERNEST TURNER, Atlanta, Ga. Filed June 30, 1920. Serial No. 393,204. 6 Claims. (Cl. 139—67.)



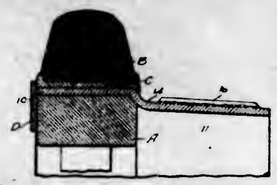
1. A tensioning device, including a loom frame, a clamping member mounted for adjustment thereon, a rod adjustable within the clamping member and means for yieldably connecting the lower end of said rod to the lay of the loom.

1,385,915. SCREWDRIVER. MANUEL HARDEY, San Francisco, Calif. Filed Jan. 5, 1921. Serial No. 435,247. 2 Claims. (Cl. 145—50.)



2. A screw driver bit comprising a bit with a slit formed at its end to produce two adjacent bits and a shoulder on each bit against which a screw bears when the two bits are squeezed together to bring them into the slot in the head of the screw.

1,385,916. ROLLING-PIN. WILLIAM HARRIS, Cambridge, Ohio. Filed Dec. 30, 1920. Serial No. 434,079. 8 Claims. (Cl. 107—50.)

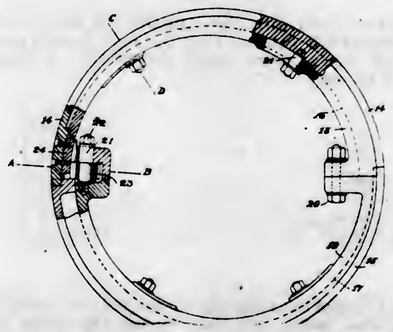


3. A rolling pin including a body member having reduced neck portions, a bearing member removably mounted upon each of said neck portions, said bearing members each having a central opening and an annular groove in one face thereof in spaced relation with the opening to receive the neck portions, a shaft having its ends mounted within said bearings, each of the bearing members having portions of its body disposed between said neck and shaft, and handle members upon the ends of the shaft.

1,385,917. HEMP HARVESTING AND SPREADING MACHINE. LUD HOLLAND-LETZ, Oak Park, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed May 31, 1917. Serial No. 172,065. 14 Claims. (Cl. 56—182.)

10. In a hemp harvester, cutting mechanism, a conveyer for discharging the hemp from the harvester, and means extending around the delivery lap of said conveyer and downwardly beyond the same for compressing and retaining the same on the conveyer and guiding it as it is discharged.

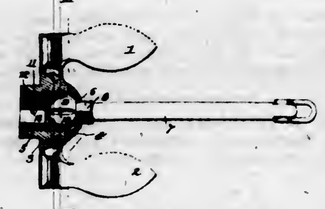
1,385,918. AUXILIARY TREAD ELEMENT FOR VEHICLE-WHEELS. ERNEST STAFFORD HOWARD, Red Bank, N. J. Filed Jan. 22, 1921. Serial No. 439,134. 1 Claim. (Cl. 301—39.)



As a new article of manufacture, an attachment for vehicle wheels comprising an annular securing portion adapted to fit over the felly of a wheel, and a lateral annular flange integral with said securing portion and extending laterally at one side of the same to afford an auxiliary tread surface, said annular flange tapering toward its outer end.

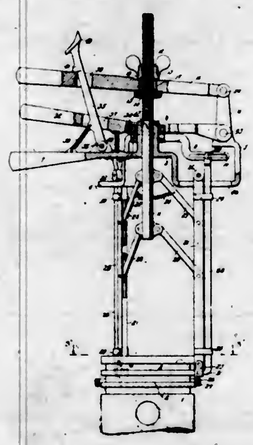
1,385,919. SPRING. WILLIAM IRWIN, Irwin, Pa. Filed May 4, 1920. Serial No. 378,840. 1 Claim. (Cl. 267—69.)

A spring construction including a body portion formed of a plurality of coils, the coils tapering toward one end and formed into an eye, and having an extension formed at the opposite end, a hook including a shank having an eye formed intermediate its ends, the last mentioned eye adapted to accommodate the extension, one end of the shank being positioned within the coils of the spring, a hook member disposed in the opposite end of the spring, said hook member having interlocking loops and one end of one of the loops adapted to contact with the inner tapered surface of the body portion to restrict movement of the hook member within the body.



1,385,920. TEMPORARY OR PERMANENT SUPPORT FOR VEHICLE SOLID BAND-TIRES. BENJAMIN LEE and SAM HARRY LEE, Sankey, England. Filed Jan. 31, 1918. Serial No. 214,713. 1 Claim. (Cl. 301—17.)

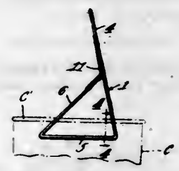
A tire support comprising a rim having a circular internal periphery, a rotatable one-piece member within said rim



having a circular outer surface capable of expansion, internal partially circular surfaces integral with said member and staggered eccentrically to the center of rotation of the member, a separate abutment ring having external complementary surfaces thereon, circularly disposed, and coöperating means between said rim and said rotatable member to positively displace said member relatively to said rim to cause expansion of the said rotatable member into engagement with said rim.

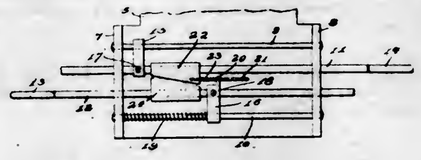
1,385,921. ANCHOR. ALEXANDER MCNAB, Bridgeport, Conn. Filed Sept. 11, 1920. Serial No. 409,552. 2 Claims. (Cl. 114—208.)

1. In an anchor, the combination of a crown piece having a socket formed therein; a shank; and a substantially spherical head carried by the shank, seated and held in the socket, said head having grooves formed in the outer face thereof.



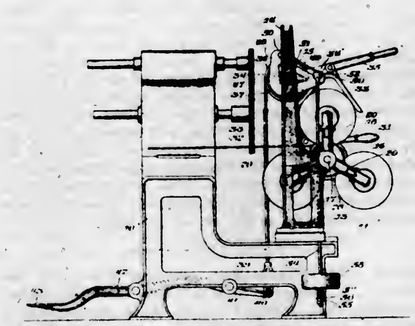
1,385,922. PISTON-RING PLACER. EDISON MCPEEK, Sardis, Ohio. Filed June 15, 1920. Serial No. 389,100. 9 Claims. (Cl. 29—86.4.)

1. A piston ring placer, comprising a radially slotted frame, members movably supported and guided in the slots of the frame, said members adapted to support a piston ring, means for moving the members to expand or permit contraction of the ring, and means for ejecting the ring from the members.



1,385,923. DISPLAY-CARD. WALTER A. MYERS, Burlington, Vt. Filed May 26, 1921. Serial No. 472,832. 2 Claims. (Cl. 40—4.)

1. A display card comprising a strip of cardboard or the like foldable along transverse lines to form an upstanding body portion, an intermediate base portion and an upstanding flap, there being an opening intersecting the base portion and having opposed walls spaced apart a distance



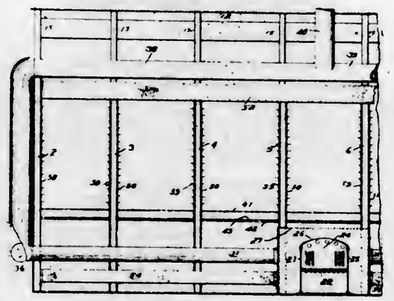
slightly less than the diameter of the article to be engaged by the card, there being extensions of the opening projecting into the body portion and the flap portion of the card and provided with diverging end walls.

1,385,924. PICKER-STAFF CHECK FOR LOOMS. ROGER N. REYNOLDS, Atlanta, Ga., and BENJAMIN D. BALLEW, Greenville, S. C.; said Ballew assignor of one-half of his right to Sidney Baxter, Atlanta, Ga. Filed Dec. 13, 1920. Serial No. 430,381. 5 Claims. (Cl. 133—22.)

2. In a loom, a stop mechanism comprising a supporting means, oppositely movable buffer arms mounted in said supporting means and arranged in the path of the picker staff, and wedge blocks carried by said buffer arms and adapted to come together to prevent the rebound of the arms, substantially as described.

1,385,925. TENSION DEVICE FOR WINDING AND REELING MACHINES. GEORGE L. RICE, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Feb. 1, 1918. Serial No. 214,960. 7 Claims. (Cl. 242—156.)

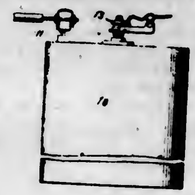
7. In a winding and reeling machine, a frame, a shaft carried thereby, a rotary reel mounted on said shaft, a plurality of rotatable supply bobbins carried by said reel, means for locking the reel with the upper bobbin in delivering position, an arm pivotally mounted on said frame, a tension member carried by said arm and adapted



to engage the upper of said supply bobbins, and a sliding weight shiftable from one side of the pivot of said arm to the other for holding said tension member in engagement with said supply bobbin during delivery and for holding said tension member out of engagement with said supply member during rotation of the reel.

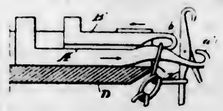
1,385,926. ANTISKID-TIRE. CHARLES P. SALGEE, Philadelphia, Pa. Filed Dec. 11, 1920. Serial No. 429,969. 2 Claims. (Cl. 152—6.)

2. A tire for vehicle wheels comprising an annular flat ring adapted for attachment on a wheel felly and having equi-distant longitudinally disposed integral bridge pieces projecting outwardly therefrom, a rubber tire for fitment on said annular ring over the bridge pieces and having an undulating continuous passage therethrough, and a compressed fabric rope-like element of a higher co-efficient of friction continuously interlaced through said passage and bridge pieces whereby the tire is firmly anchored to the flat ring.



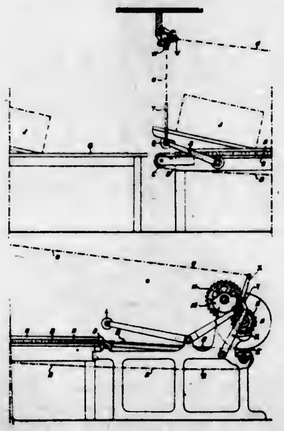
1,385,927. FISH-CURING MACHINE. WILLIAM F. SCHALLER, San Francisco, Calif. Filed Feb. 25, 1920. Serial No. 361,216. 6 Claims. (Cl. 34—39.)

5. A machine of the class described comprising a casing having a plurality of trays supported therein, side doors through which the trays may be placed in the casing and removed therefrom, a pair of foraminated partitions one over the other in the lower portion of the casing, a furnace below said partitions having heating pipes extending toward both ends of the casing, other heating pipes returning through the top of the casing and connected with the lower heating pipes, means to regulate the amount of air passing through one of the foraminated partitions over the heating pipes, outside dampers between said foraminated partitions and below them, and means to allow the escape of excessive moisture at the top of the casing.



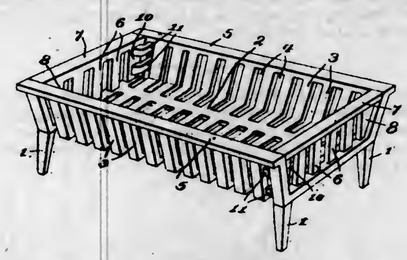
1,385,928. WIRE-TERMINAL. EDWARD SCHWARTZ, New York, N. Y., assignor to Manhattan Electrical Supply Company, Inc., Jersey City, N. J., a Corporation of Massachusetts. Filed Jan. 27, 1919. Serial No. 273,321. 2 Claims. (Cl. 173—259.)

1. A spring binding post comprising a base affording means for securing the post in position, upstanding channel sides therefor extending in one direction beyond the base, projecting wire-engaging means on said channel sides, in combination with a spring strap between said sides forming a continuation of the base, but bent upward therefrom and extending in the direction of the channel



sides beyond the base, together with wire engaging means bent downward from opposite sides of said strap and embracing the wire engaging means on the channel sides to coöperate therewith to engage and grip an inserted wire.

1,385,929. KNITTING-MACHINE NEEDLE. ROBERT W. SCOTT, Babylon, N. Y. Filed May 1, 1920. Serial No. 378,233. 20 Claims. (Cl. 66—5.)

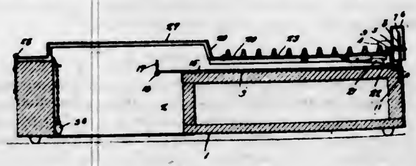


6. A knitting machine needle in two parts one having a hook to draw a new loop, while the other part has a hook with a return bend to engage and take a previous loop from the first mentioned part.

1,385,930. SACK-FEEDER. WILLIAM SCOTT, Lochee, Dundee, Scotland. Filed Mar. 2, 1918. Serial No. 220,055. 3 Claims. (Cl. 271—45.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

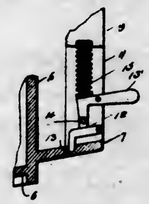
2. In rotary sack-printing and like machines of the type described; feed mechanism comprising in combination an endless feed cloth traveling only in a horizontal plane, a plurality of tables arranged in series on which is placed the material to be transferred to the feed cloth, one table extending over a part of the feed cloth, a second table to the rear thereof, and timing rollers for each attendant so that the material fed to the cloth travels forward at the proper time, as described.

1,385,931. GRATE-BASKET. PAUL F. SEMONIN, Louisville, Ky. Filed Dec. 17, 1920. Serial No. 431,472. 4 Claims. (Cl. 126—165.)



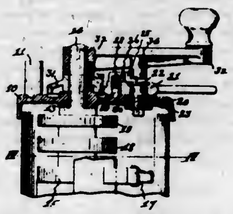
4. An improved grate basket comprising a bottom provided with means to support it at an elevation, front and rear walls rising from said bottom, removable side walls fitted between the ends of said front and rear walls and adapted to rest upon the bottom, said side walls provided with means at one end engaging with the front and rear walls to secure that end of the side wall in place and against lateral movement, and coöperating means between the front and rear walls and the other ends of said side walls adapted to detachably hold the side walls in place at this end and against lateral displacement, substantially as described.

1,385,932. HYDRAULIC VALVE. DAVID F. STAYMAN, Baltimore, Md., assignor to Isaiah G. Engle, Philadelphia, Pa. Filed June 10, 1919. Serial No. 303,049. 1 Claim. (Cl. 251—146.)



In a device of the class described, a valve element, a body on which said valve is seated, and a cylinder for forming an air cushion, said cylinder comprising upper and lower tubular sections having telescoping connection, the lower section having a port therein and including a flanged cover plate for the valve, the upper section including a head, a stem formed on the head, concentric with the walls of the upper section of the cylinder, the stem projecting through the valve and into said body, to which it is secured, and a spring encircling the stem within the two part cylinder thus formed, and spaced from the walls of each.

1,385,933. VENDING-MACHINE. WILLIAM G. TEMPLETON, Colorado Springs, Colo. Filed Sept. 30, 1919. Serial No. 327,414. 7 Claims. (Cl. 211—33.)

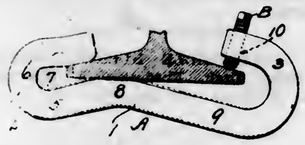


5. In a vending machine the combination with means for supporting strip material, and means mounted for back and forth movement for feeding the strip material from the machine in measured lengths, of a stationary cutting strip below the path of the vended material, a cutting wheel movable along said strip and transversely of the vended strip to sever the strip material, and means for automatically returning the wheel to normal position when released.

1,385,934. COLLAPSIBLE BUCKET. RAYMOND D. VINES, Ogden, Utah. Filed Dec. 30, 1919. Serial No. 348,259. 1 Claim. (Cl. 220—8.)

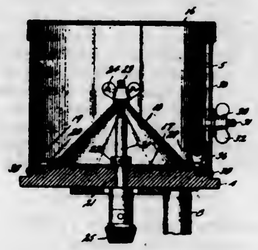
A bucket comprising a plurality of telescoping sections, the top and bottom sections having outwardly extending projections, bars having their extremities engaging the inner faces of said projections to hold the bucket extended, means hingedly connecting the upper ends of the bars to the upper section to admit of the bars folding over the bucket, latches carried by the lower ends of the bars to positively and detachably engage the lower projection, and spring controlled finger engaging members mounted upon the bars for operating the said latches.

1,385,935. CONTROLLER LOCK-LEVER. ALBERT R. WILLIAMS, Ironton, Ohio, assignor to The Ironton Engine Company, Ironton, Ohio, a Corporation of Ohio. Filed July 15, 1920. Serial No. 396,439. 5 Claims. (Cl. 74—83.)



1. A controller or switch operating device comprising a cover having an opening, a rotatable shaft passing through said opening of the cover, a controller lever secured to said shaft for rotating the same, a collar rotating with said shaft and controller lever, a lock lever pivotally supported on said cover in proximity to said controller lever and collar, means on said lock lever to engage said controller lever and limit its angle and direction of rotation, and a secondary means on said lock lever to engage the index collar to lock the controller lever in a fixed or neutral position.

1,385,936. RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed Aug. 29, 1917, Serial No. 188,810. Renewed June 23, 1921. Serial No. 479,962. 1 Claim. (Cl. 238—330.)

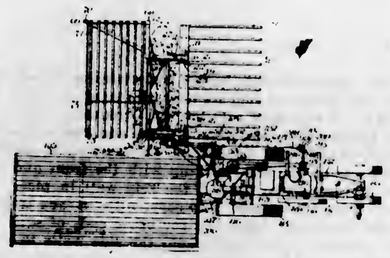


A rail anchor comprising a spring bar upwardly bowed between its ends forming a fulcrum engaging the rail base at an intermediate point thereof, said bar being also

formed at one end with a clip having a clearance beyond and beneath the edge of one rail flange and having a bearing engagement upon the upper side of said flange,

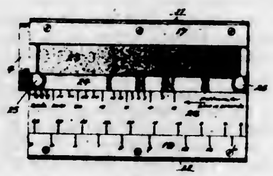
and an adjusting device adjustably engaging the other arm of the spring bar and having a bearing engagement on the upper side of the opposite edge of the rail base.

1,385,937. PLANTER. GEORGE H. WAIGHT, Spokane, Wash. Filed Apr. 7, 1920. Serial No. 371,968. 3 Claims. (Cl. 221—125.)



1. A planter, comprising a seed box having an outlet opening in its bottom, a disk on the bottom of the seed box having adjacent its edge a circular series of seed openings or pockets, said pockets having walls projecting slightly above the surface of the disk, a conical deflector secured centrally on the disk and directing the seed into the pockets, means for controlling the discharge of seed from the pockets through said outlet, said means comprising a housing having an opening for the passage of the pockets, a pivoted gate controlling said opening, and a spring tongue adapted to eject seeds through the bottom of the pockets.

1,385,938. HAIR-CUTTER. EDWARD E. ZIEGLER, Philadelphia, Pa. Filed Aug. 4, 1919. Serial No. 315,276. 2 Claims. (Cl. 30—1.)

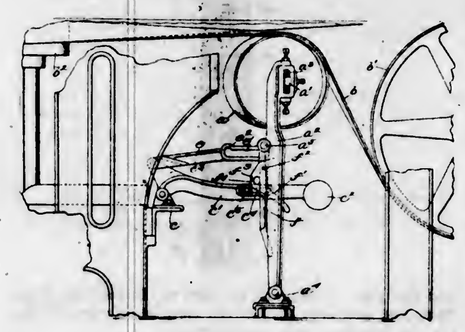


1. A hair cutter comprising a casing, an operating shaft journaled in the casing, a rigid cutter on the casing, a movable cutter in the casing disposed to operate over the rigid cutter, a stud projecting upwardly from the lower portion of the casing, an operating member mounted on the stud and connected with the operating shaft for imparting an oscillatory movement to the movable cutter when the shaft is actuated, a spring on the stud between the casing and the operating member and serving to hold the latter in connection with the movable cutter, a cutter adjusting member overlying the casing and having one end engaging the movable cutter and the other end fitted over the stud, a nut for the stud and a spring on the stud between the nut and the adjusting member and bearing against the latter.

1,385,939. GRAIN-SHOCK LOADER. EDWARD W. BURGESS, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Nov. 13, 1915. Serial No. 61,404. 3 Claims. (Cl. 214—42.)

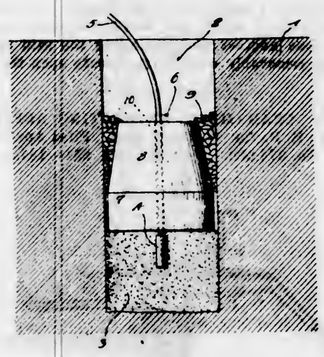
1. In combination, a motor propelled vehicle having a source of power thereon, a draft member carried thereby, a trailing vehicle connected to said draft member, a shock loader connected to said draft member and disposed at one side of said trailing vehicle, said shock loader including a shock engaging and hoisting fork, operative connections between said source of power and said shock hoisting fork, and a deflecting member carried by said loader and located in a position to receive the shock discharged by said fork and to deflect said shock into said trailing vehicle.

1,385,940. METHOD OF AND APPARATUS FOR DETERMINING PHOTOGRAPHIC EXPOSURES. VALCOULON L. ELLICOTT, Baltimore, Md. Filed Jan. 14, 1920. Serial No. 351,471. 11 Claims. (Cl. 95—10.)



1. That method of determining photographic exposures which consists in determining the actinic intensity of light falling upon the observer, making a photometric comparison of said light and the light reflected from the subject to the observer and expressing the exposure as a function of the two values thus determined.

1,385,941. OIL-PROOFED CONTAINER AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Co., a Corporation of New Jersey. Filed Sept. 19, 1917. Serial No. 192,233. 3 Claims. (Cl. 91—68.)



1. The process of oil-proofing concrete tanks which comprises applying thereto an acid solution of sulfite cellulose waste liquor and permitting the latter to react with the alkali of the concrete.

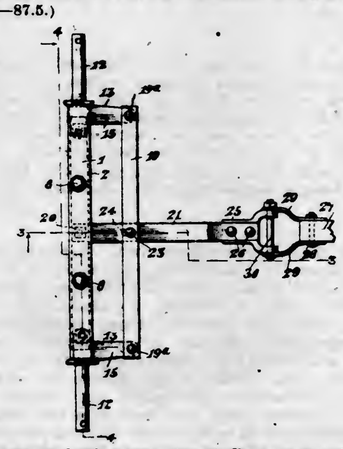
1,385,942. AUTOMATIC BELT-TIGHTENER. GEORGE N. GODDARD, Newton, and FRANK A. SMITH, Reading, Mass., assignors to American Tool & Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 15, 1919. Serial No. 323,917. 7 Claims. (Cl. 64—5.)

1. In an automatic belt tightener the combination of a movable idler pulley supporting frame, an independently supported weight-arm, a link pivotally connected at its rear end to an appropriate part of said weight-arm and having at its forward end a plurality of notches arranged to engage and position said pulley frame and to keep the pulley pressed against the belt to take up the slack thereof, substantially as described.

1,385,943. DRILL-HOLE SHOOTING-PLUG. ERNST W. GREINER, New Castle, Pa. Filed Feb. 27, 1920. Serial No. 361,692. 1 Claim. (Cl. 102—11.)

A drill hole shooting plug comprising a relatively long solid substantially cylindrical body provided with a central bore for passage of a fuse, the exterior surface of said body being gradually tapered from a point intermediate its center and lower end to its upper end, forming a truncated conical upper portion and a cylindrical lower portion, the upper end of said truncated portion being circular, flat, and of considerable diameter to permit a suitable instrument to be engaged with it for forcing the plug by irregularities in the wall of the drill hole.

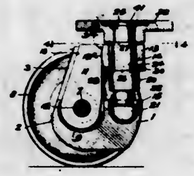
1,385,944. NOTATION FOR INDICATING LIGHTING EFFECTS. MARY HALLOCK-GREENEWALT, Philadelphia, Pa. Filed Aug. 18, 1919. Serial No. 318,393. 8 Claims. (Cl. 283—1.)



1. A system of notation for indicating lighting effects in timed succession comprising a series of arbitrary symbols, certain of said symbols indicating light, and other symbols indicating the intensity of such light.

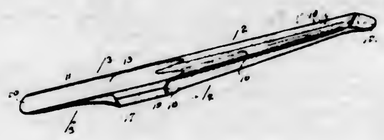
1,385,945. BELT-BUCKLE. JOHN HEBERLING, Rochester, N. Y. Filed May 13, 1921. Serial No. 469,347. 4 Claims. (Cl. 24—191.)

1. A belt buckle, comprising a plate having side flanges, a stationary plate fastened on the back of the buckle plate between the flanges, said plate having its foward end bent to form a forwardly extending wedge with a shoulder at the back thereof, said stationary plate having a series of holes formed in the rear end thereof, a jaw pivoted over said stationary plate having teeth thereon registering with said holes when in locking position and adapted to force the belt into said holes.



1,385,946. COASTER-WAGON. HENRY J. HEIDER, Carroll, Iowa, assignor to Heider Manufacturing Company, Carroll, Iowa, a Corporation of Iowa. Filed Mar. 31, 1919. Serial No. 286,452. 4 Claims. (Cl. 280—87.5.)

1. A wagon having separate spindles, a supporting device for each spindle having three arms projecting there-



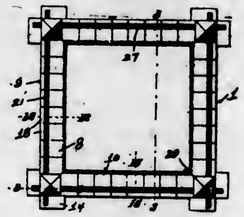
from in different angular relations, one of the arms of each supporting device being situated on the spindle side of the other two arms, said other arms being pivoted at the ends remote from the spindle with the upper of the two arms the longer, whereby the spindle slants downwardly.

1,385,947. CASTER. GEORGE J. KALBERER and JOHN A. WEIGEL, Hamilton, Ohio, assignors to The Hamilton Caster & Manufacturing Company, Hamilton, Ohio, a Corporation of Ohio. Filed July 27, 1920. Serial No. 399,252. 5 Claims. (Cl. 16—4.)

4. In a device of the class described, a swivel-supporting member, provided with a pair of spaced extensions, a bowl-shaped socket adjacent said extensions, a shank freely engaged between said extensions, a head formed upon said shank and abutting said extensions, a vertical opening through said head, a swivel-post loosely stepped within said bowl-shaped socket and traversing said head, a shoulder upon said swivel-post abutting said head, and a wheel shaft supported in said swivel supporting member and loosely traversing said shank.

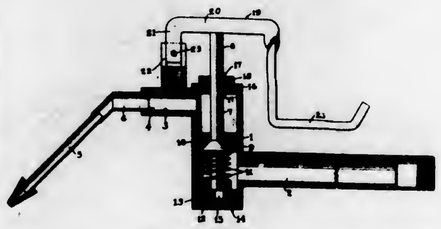
1,385,948. TIRE-REMOVING TOOL. OLOF AUGUST NORLUND, Williamsport, Pa. Filed Mar. 24, 1920. Serial No. 368,257. 3 Claims. (Cl. 157—6.)

1. In a tire removing tool, a shank, said shank comprising a knife portion, a handle portion, and a portion designed to receive blows, the knife portion having a rounded face on one side of the tool and a hollow ground face on the opposite side, and a knife edge provided along one side of the tool where the two faces meet, the end of the knife portion being formed with a knife edge which forms a continuation of the other knife edge.



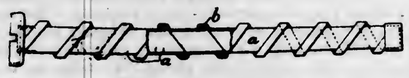
1,385,949. LICENSE-HOLDER. HARRY E. PALMER, Burlington, Vt., assignor to Auto Specialty Co. Inc., Burlington, Vt., a Corporation of Vermont. Filed July 5, 1919. Serial No. 308,796. 9 Claims. (Cl. 40—10.)

1. A license card holder, comprising the combination of a flat rectangular metal plate having provisions for permanently attaching it to a supporting surface, one edge of said plate being folded over and the opposite edge being bent at substantially right angles, and an open metal frame of greater length than said plate and having its edges folded over to hold the card, the folded portions of the longitudinal edges of said frame being cut away near one end so as to engage under said folded over edge of the plate, the end folded edge of said frame remote from said cut away portions being adapted to detachably engage



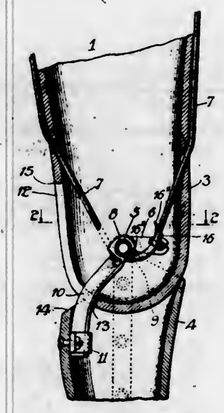
said bent edge of the plate, and said end folded edge of the frame and said bent edge of the plate being centrally cut away to facilitate their disengagement.

1,385,950. ADJUSTABLE PICTURE-FRAME. ALEX PETROW, San Francisco, Calif. Filed Oct. 26, 1920. Serial No. 419,708. 3 Claims. (Cl. 40—155.)



1. A picture frame comprising frame bars, and a plurality of blocks in which said bars are slidable, said blocks abutting one another and concealing the said bars, and means for removably securing the blocks upon the bars.

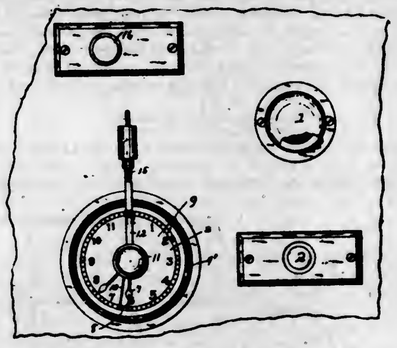
1,385,951. CRAB-MEAT-EXTRACTING APPARATUS. ARTHUR H. RANGE, Portland, Oreg. Filed Apr. 17, 1920. Series No. 374,696. 1 Claim. (Cl. 251—134.)



A device of the class described including a body chamber, an air inlet connected with the chamber at a point adjacent one end, an air outlet connected with the chamber upon the opposite side from the inlet and disposed adjacent the opposite end of the chamber from the inlet, whereby the said inlet and outlet are disposed in different planes with respect to the body, a nozzle connected to the outlet and extending at an oblique angle with respect to the body, a spring actuated valve within the chamber adapted to normally close communication between the inlet and outlet, a valve stem extending up through the chamber, spaced arms formed on the outlet, an operating handle member including a transverse body portion, an angular projecting end pivotally arranged between the spaced arms on the outlet, said transverse body portion engaging the valve stem and an L-shaped portion formed at the end of the body portion opposite the angular projecting end to provide a hand grip for actuating the handle member to move the valve and open communication between the inlet and outlet.

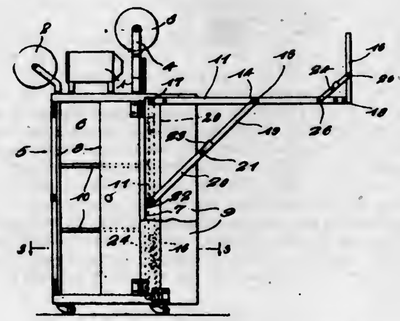
1,385,952. LOOM SHUTTLE-BOBBIN. WILLIAM ROUTLEDGE, London, England. Filed July 6, 1920. Serial No. 394,278. 4 Claims. (Cl. 242—121.)

3. A loom shuttle bobbin composed of a strip of metal spirally wound to form a taper tube, the adjacent edges of said strip being hook-shaped in cross sections, said hook-shaped portions being adapted to interlock.



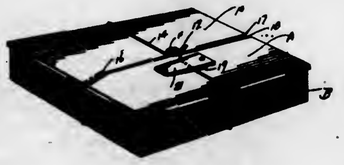
1,385,953. KNEE-JOINT MECHANISM FOR ARTIFICIAL LIMBS. JAMES F. ROWLEY, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 374,948. 12 Claims. (Cl. 3—11.)

12. In an artificial leg a knee-joint comprising a hinge pivot, a lever fulcrumed thereon having one arm secured to one of the leg members and another arm disposed transversely of the main axis of said member, a tubular arcuate bearing pivoted forward of its center on the free end of said other arm in a plane perpendicular to said pivot, and an actuating cord loop disposed lengthwise of the other leg member and extending through said bearing.



1,385,954. TIMING-SWITCH FOR AUTO LIGHTING-CIRCUIT. JOHN F. SCHREIBER, Milwaukee, Wis. Filed July 10, 1919. Serial No. 309,862. 7 Claims. (Cl. 161—1.)

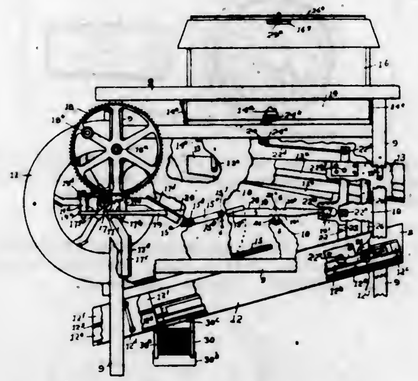
4. In a timing switch mechanism for lighting circuits, the combination with a time piece provided with a rotary contact arm, a transparent cover for the time piece provided with a rotatively adjustable terminal having one portion in the path of said arm when said contact arm and terminal are in engagement, and electrically operated mechanism controlled by said contact arm and terminal for



connecting up the lighting circuit, said lighting circuit having a shunt which includes said contact arm and terminal, and said electrically operated mechanism.

1,385,955. PICTURE-PROJECTING APPARATUS. IWAN SERAURIER, Altadena, Calif. Filed Jan. 12, 1920. Serial No. 350,767. 7 Claims. (Cl. 88—17.)

1. A device of the class described, comprising a cabinet and a moving picture projector supported on the top of said cabinet, said cabinet having a compartment adapted to contain moving picture projector parts and supplies and another compartment adapted to contain a screen, a screen for reception in said other compartment, and means connecting said cabinet and screen to space the screen outwardly from the cabinet and dispose said screen in axial alinement with the projector lens for use.



1,385,956. PACKAGE-TIE. CHARLES G. SERVIS, Logan, Iowa. Filed May 11, 1920. Serial No. 380,561. 4 Claims. (Cl. 24—18.)

1. A package tie comprising a flat plate, an upstanding heated post carried by the central portion of the plate, the

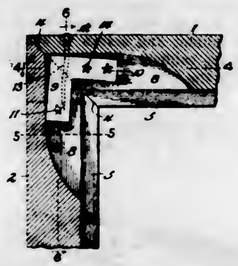


plate having its opposite ends provided respectively with an inclined guide opening and an inclined guide groove, a binding cord having one end secured to the central post, the cord being arranged in said inclined guide opening and adapted to engage in said groove when the same is passed around a package, and a releasable resilient clamp carried by the upper surface of the plate at one side of the post for detachably receiving the free end of said binding cord.

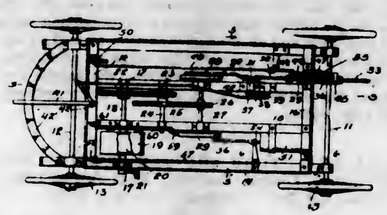
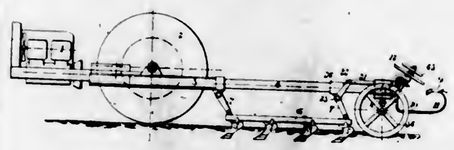
1,385,957. SEED SEPARATOR AND GRADER. WILLIAM V. VAN ETTEN, Bellingham, Wash. Filed Dec. 26, 1919. Serial No. 347,388. 5 Claims. (Cl. 130—15.)



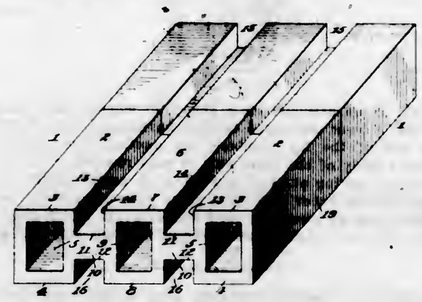
1. In combination, a seed receptacle, means to draw seed from said receptacle in a wide stream, means to control the volume of said flowing seed, a shakable seed sieve below said receptacle, means to vibrate said sieve rapidly in short arcs, means to change the amplitude of said arcs of vibration, a brush screen mounted above said sieve, means to cause the front end of said brush screen to vibrate rapidly in an arc of short length and the rear end of the same to vibrate in a plane, said movements timed with those of said sieve but in an opposite direction, and means to change the amplitude of the vibrations of said brush screen.

1,385,958. FRAME FOR WINDOW-SCREENS AND METHOD OF MAKING SAME. FREDERICK W. VAN FLEET, Toledo, Ohio. Filed Apr. 24, 1920. Serial No. 376,282. 3 Claims. (Cl. 20—92.)



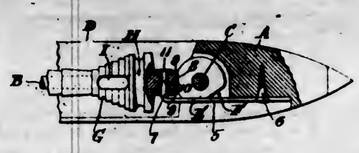
1. A window or other sash frame, comprising rails each with a miter end having a narrow cut lengthwise thereinto for a portion of the width of the rail, angular corner pieces of sheet metal with leg portions entering meeting cuts at the miter ends of the rails, pins traversing the rails and leg portions of the corner pieces, and a nail or pin extending through one miter end of each joint and entering the miter end of the other rail completing the joint.

1,385,959. BABY-CARRIAGE. JOSEPH WEASLER, Cascade, Wis. Filed July 15, 1919. Serial No. 310,953. Renewed Apr. 20, 1921. Serial No. 463,078. 4 Claims. (Cl. 180—1.)



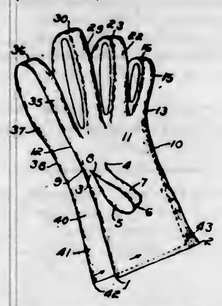
1. A wheeled vehicle having a frame and wheel supporting axles, a pinion carried by one of the axles, a bell crank pivotally connected with the frame, a rocker lever pivotally connected with the bell crank, a rack connected with the lever and engaging the pinion for imparting rotary movement to the pinion as the rack reciprocates, a rotary driving element, a pitman connecting the lever with the driving element and imparting operating movement to the lever as the driving element rotates, and means for rotating the driving element.

1,385,960. MOTOR-PLOW. ERNST WENDELER, Berlin, Germany, assignor to The Firm of Deutsche Kraftpflug-Gesellschaft M. B. H., Berlin, Germany. Filed May 11, 1920. Serial No. 380,706. 13 Claims. (Cl. 97—30.)



1. In a motor plow, a carriage frame and a share frame suspended on said carriage frame, the rear part of said carriage frame consisting of a single beam only.

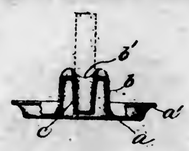
1,385,961. BUILDING-BRICK. JAMES P. WILLIAMS, Milton, Pa. Filed May 19, 1920. Serial No. 382,534. 6 Claims. (Cl. 72—41.)



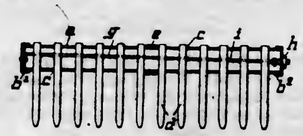
1. A building-brick comprising side load-sustaining members, hollow throughout their length to provide longitudinal air-cells; a central load-sustaining member of approximately the same dimensions as the side members and also provided with a longitudinally-extending air-cell; there being at least three of such air-cells in the brick; and solid webs connecting the central load-sustaining member with each of the side members and extending in horizontal planes from the central member approximately midway of its top and bottom portions; the upper and lower faces of each of the side members being in the same plane; the side members being in balanced relation to the central member; the central member presenting two oppositely-disposed hand-holds, whereby the brick is rendered reversible and adapted to be gripped at either side; and there being between the central member and each side member a mortar-joint-breaking channel having right angularly formed walls.

1,385,962. BOBBIN-HOLDING MEANS. WILLIAM P. WOOD, Pawtucket, R. I., assignor to Jenckes Spinning Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed June 29, 1918. Serial No. 242,673. 9 Claims. (Cl. 139—89.)

1. In a shuttle, the combination with the bobbin and the bobbin spindle, of a longitudinal tongue at the butt end of the bobbin having a socket extending transversely therethrough, and a spur on the shuttle body adapted to engage said socket when the bobbin is inserted to lock the bobbin against longitudinal displacement or turning on the bobbin spindle.



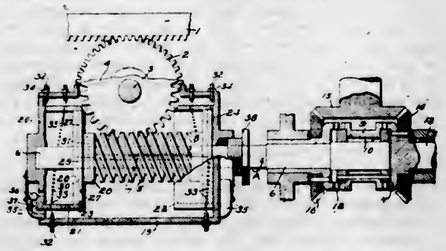
1,385,963. GLOVE AND METHOD OF MAKING SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed Sept. 9, 1918. Serial No. 253,205. 20 Claims. (Cl. 66—4.)



1. In an article of manufacture, a glove blank consisting of a single, longitudinal strip substantially of the width of the hand, having opposite selvaged edges, with finger strips each having opposite selvaged edges and each being of twice the length of the corresponding finger and adapted to be folded transversely at the tip, said blank being adapted to be secured together along said opposite selvaged edges.

1,385,964. COMBINED CIGARETTE HOLDER AND EXTINGUISHER. WINDSOR COBB, San Francisco, Calif., assignor to R. Blackinton & Co., North Attleboro, Mass., a Copartnership composed of Roswell Blackinton, Walter B. Ballou, Howard M. Ballou, Myra A. Freeman, and Helen G. Cutter. Filed June 28, 1919. Serial No. 307,424. 4 Claims. (Cl. 131—51.)

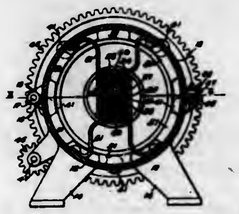
1. A cigarette holder and extinguisher comprising a supporting base portion, an upwardly projecting boss formed with an internal vertical socket open at its top and flared from the bottom to the top, the diameter of said socket at some intermediate point being approximately equal to the diameter of a cigarette whereby a cigarette when inserted with its lighted end downward is pinched to exclude air and prevent the escape of smoke fumes therefrom, substantially as described.



1,385,965. RAKE WITH EXCHANGEABLE PRONGS. MAX EDEL, Nuremberg, Germany, assignor to the Firm of Maschinenfabrik Worzeldorf H. A. Paulus & Franck, Worzeldorf-Nuremberg, Germany. Filed Jan. 6, 1921. Serial No. 435,528. 6 Claims. (Cl. 55—10.)

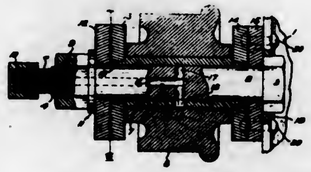
5. A rake, comprising, in combination, a hollow rake-head, a metal-band having oblong apertures extending through said head in its longitudinal direction; holes provided in the rake-head wall and registering to said metal-band apertures; prongs passing through said holes and said apertures; caps closing the rake-head ends; a central hole in one of said caps; a connection between the other cap and the adjoining end of the metal-band; a threaded bolt affixed to the other end of the metal-band and extending through said cap-hole; and a nut upon the outer end of said bolt, for the purpose set forth.

1,385,966. REVERSING MECHANISM. THURE LARSSON, Worcester, Mass. Filed July 29, 1919. Serial No. 314,154. 13 Claims. (Cl. 74—36.)



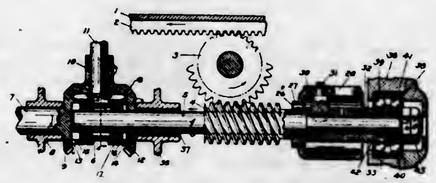
1. A reversing mechanism for reciprocating a load comprising a rotatable, longitudinally movable worm, means to rotate the worm uniformly in opposite directions and fluid controlled means to yieldingly resist longitudinal movement of the worm to start the load gradually and uniformly from rest to a uniform driving rate and thereafter positively limit such longitudinal movement until the mechanism is reversed.

1,385,967. APPARATUS FOR APPLYING COVERING OF SHEET MATERIAL. JAMES P. A. MCCOY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 9, 1917. Serial No. 180,015. 12 Claims. (Cl. 173—244.)



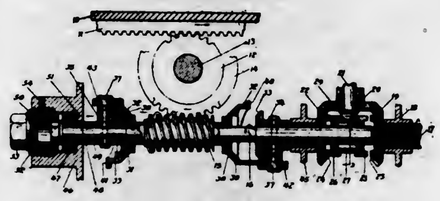
10. Apparatus for applying a covering to a core, comprising a frame, means for supporting said core in oper-

ative position relative to said frame, means for applying a covering of sheet material to said core, a pressing element of flexible metal fabric, means for yieldingly supporting said pressing element in operative engagement



with the covering on said core, and means for causing relative rotation between said pressing element and the covering of sheet material on said core to thereby press and compact said covering.

1,385,968. LUBRICATING DEVICE FOR CHAIN-PINS. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 25, 1918. Serial No. 236,945. 2 Claims. (Cl. 74—32.)

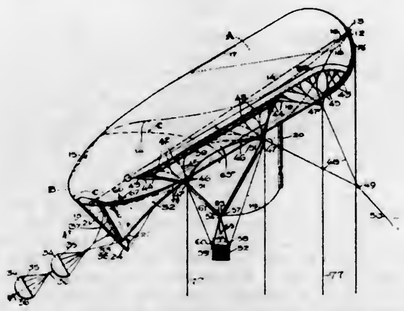


1. In combination, a bushing having a bore and a flattened end, a chain link rigidly secured to said bushing at said end, a pin fitting said bore and having adjacent coarse and fine threaded portions at an end thereof, a second chain link rigidly secured to said pin, said links being relatively angularly movable, means for preventing relative transverse movement of said links in one direction, means associated with said coarse threaded portion of said pin for preventing relative transverse movement of said links in the opposite direction, and a lubricant cap associated with said fine threaded portion of said pin, said pin being adapted to conduct lubricant from said cap to said bore.

1,385,969. DRIVING AND REVERSING MECHANISM. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 27, 1918. Serial No. 225,118. 9 Claims. (Cl. 74—36.)

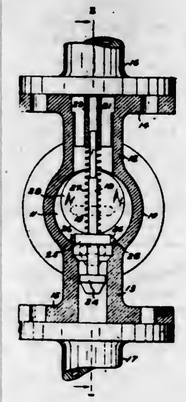
1. In a driving and reversing mechanism for a reciprocating load, means to start the load gradually and to move it in opposite directions comprising a screw threaded member rotated continuously between reversals, a driven member meshing therewith and automatic means rotated continuously during the starting operation to impart a gradual acceleration of velocity to said member and thereafter drive it at a normal rate.

1,385,970. REVERSING MECHANISM. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 4, 1918. Serial No. 232,599. 8 Claims. (Cl. 74—36.)



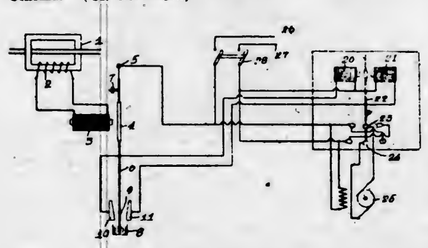
1. A reversing mechanism comprising a rotatable driving worm, a worm gear and load driven by the worm, reversing driving means for the worm, means to move the worm axially at an increasing rate to start the load gradually and thereafter to rotate the worm at a normal rate for an indeterminate period and means whereby the load may come gradually to rest under its own momentum without material shocks at each reversal.

1,385,971. TURNSTILE. CONRAD D. TRAUBENBACH, Mount Vernon, and DIETRICH BALDWIN SANNEMAN, Brooklyn, N. Y., assignors to Perey Manufacturing Company, a Corporation of New York. Filed Nov. 20, 1919. Serial No. 339,326. 7 Claims. (Cl. 105—341.5.)



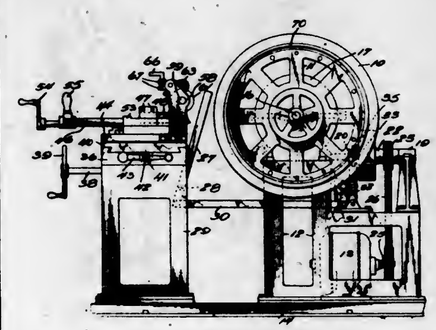
1. The combination with a car, of two independent turnstile casings containing registering mechanism, and a single head and arms therefor.

1,385,972. KITE-BALLOON. RALPH H. UPSON, Akron, Ohio, assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 20, 1916. Serial No. 104,691. 16 Claims. (Cl. 244—4.)



1. In a kite-balloon, an envelop having separate gas and air compartments, a substantially conical inlet neck flexibly dependent from the air compartment, and a keel extending between said inlet neck and the balloon envelop, whereby said inlet neck is anchored in a substantially fixed position.

1,385,973. FLOW-INDICATOR. ARTHUR J. BROWN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 2, 1920. Serial No. 349,654. 11 Claims. (Cl. 116—117.)



1. A flow indicator, comprising a casing having openings affording a flow of fluid therethrough and provided with a transparent window affording a view of the interior of the casing, and an indicating element within said casing having an indicating portion biased to a non-indicating position and movable to an indicating position in response to flow of fluid through said casing, said indicating element comprising a part in the path of flow through said casing and capable of offering substantial obstruction to such flow, said latter part being coöperative with a portion of said casing to permit flow of variable amount through said casing when said indicating portion is in indicating position.

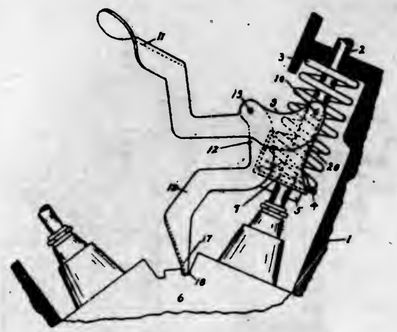
1,385,974. CURRENT-REGULATOR FOR ELECTRIC FURNACES. SIDNEY BURROWES, Niagara Falls, Ontario, Canada. Filed Oct. 26, 1920. Serial No. 419,725. 6 Claims. (Cl. 204—64.)

1. A regulator for furnace electrodes, comprising a motor adapted to actuate said electrodes, a source of power adapted to be connected to said motor, a switch adapted to establish said connection, a magnet adapted to operate said switch, a plurality of uniformly moving contactors in circuit with said magnets, a movable contact element adjacent said uniformly moving contactors, and a magnet adapted to operate said movable contact, said magnet being electrically related to the circuit of the electrodes whereby its energization is in proportion to the strength and duration of current through the electrodes.

1,385,975. TIRE-FINISHING MECHANISM. MARK A. REPLOGLE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 17, 1918. Serial No. 258,641. 5 Claims. (Cl. 18—1.)

1. An apparatus of the character specified, a tire trimming blade having its forward portion beveled longitudinally and provided with longitudinal flutings, the forward edge portion of the blade being inclined forwardly downwardly.

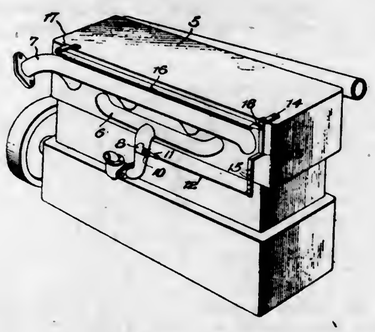
1,385,976. METHOD OF MAKING CROWN-OPENERS. EDWIN WALKER, Erie, Pa.; Jessie Sterrett and Mary E. Steiner administratrices of said Edwin Walker, deceased. Original application filed July 19, 1910, Serial No. 572,681. Divided and this application filed July 22, 1915. Serial No. 41,275. 4 Claims. (Cl. 76—101.)



1. The method of making an article of the class described, which consists in bending a rod or wire into the form of a loop but leaving an extension on said loop to form a handle and then producing lips in the inner surface of said loop by swaging the metal thereof inwardly of the loop for the purpose of forming crown lifting projections.

REISSUES.

15,162. DEVICE FOR REMOVING PUPPET-VALVES. CHARLIE J. BOUSFIELD, Bay City, Mich. Filed May 14, 1919. Serial No. 297,176. Original No. 1,245,667, dated Nov. 6, 1917, Serial No. 81,896, filed Mar. 3, 1916. 18 Claims. (Cl. 29—86.3.)

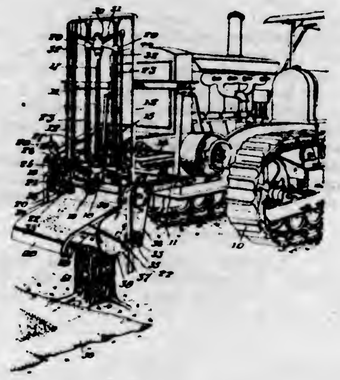


1. In a spring-lifting device of the class described, the combination of a lifting cup adapted to be removably applied around the valve stem and adapted to lift the spring, a bifurcated lever pivotally secured to the upper part of said cup and having a handle, a thrust bar pivoted at its upper end to said lever, its lower end adapted to engage a stationary support, the pivotal connection between the lever and thrust bar adapted to travel

past an imaginary line connecting the pivotal connection of the cup and the point of support of the thrust bar, to

lock the thrust bar and lever in place, said thrust bar engaging said handle when in locked position, for the purposes set forth.

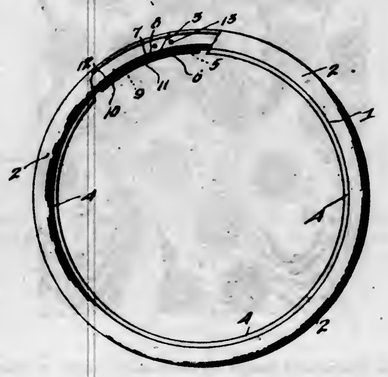
15,163. AUXILIARY AIR-INTAKE FOR INTERNAL-COMBUSTION ENGINES. DAVID DUNLOP and JOHN D. DAVIS, Petersburg, Va. Filed Feb. 7, 1919. Serial No. 275,673. Original No. 1,280,193, dated Oct. 1, 1918, Serial No. 176,134, filed June 21, 1917. 3 Claims. (Cl. 123—124.)



1. The combination with an internal combustion engine having an intake manifold and an exhaust manifold, a valve casing communicating with the intake manifold, a reciprocatory valve for the casing, said casing being provided with an inlet port having opposite walls diverging in the direction of the opening movement of the valve, a thermostatic element mounted adjacent and in substantially parallelism with the exhaust manifold, and a lever fulcrumed in its upper portion upon the engine and connected at its lower portion with the valve, and also associated with the thermostatic element for movement thereby.

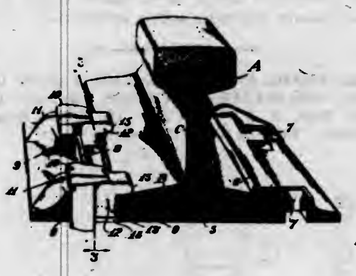
15,164. GARTER-CLASP. AUGUSTA S. JOHNSON, Philadelphia, Pa. Filed June 15, 1921. Serial No. 477,804. Original No. 1,368,558, dated Feb. 15, 1921, Serial No. 364,004, filed Mar. 8, 1920. 5 Claims. (Cl. 24—245.)

5. In a garment supporter the combination with a clasp, of a button supporting member comprising a strip connected to the clasp and depending therefrom, a sheath at the lower portion of the strip and formed of the material thereof and a button disposed in said sheath but not rigidly connected thereto, said button being freely movable within the sheath.



15,165. DISINTEGRATING AND CONSERVING MECHANISM. EDWIN A. MCKOY and GEORGE D. MOORE, New Orleans, La. Filed May 20, 1921. Serial No. 471,258. Original No. 1,312,450, dated Aug. 5, 1919, Serial No. 262,539, filed Nov. 17, 1917. 12 Claims. (Cl. 144—2.)

1. A machine for removing stumps and conserving the substance thereof, comprising a portable frame having means for supporting, rotating and downwardly feeding toward the stump a horizontal shaft, a cutter whose diametrical and longitudinal dimensions are substantially equal to, or greater than, the transverse section of the stump, and a hood movable with said cutter and arranged to deflect and gather the cuttings.

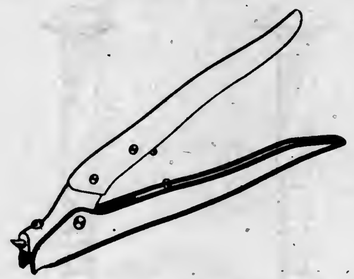


15,166. DEMOUNTABLE RIM. FREDELLIA H. MOYER, Cleveland, Ohio, assignor to General Rim Company, New York, N. Y. Filed Jan. 11, 1915. Serial No. 1,719. Original No. 1,116,723, dated Nov. 10, 1914, Serial No. 832,408, filed Apr. 17, 1914. 6 Claims. (Cl. 301—30.)

1. A device of the character described comprising a rim base split transversely thereof at a single point, a cleat on the underside of said base on one of its split ends, having formed thereon a hook, bent outwardly from the body thereof, an aperture cut in the opposite end of said base adapted to receive said hook, a locking clip mounted on the opposite end of said base adjacent to said aperture

and adapted to engage the hook end of said cleat, said clip being adapted to hold and lock the hook end of said cleat in said aperture.

15,167. RAILWAY TIE-PLATE. WARREN M. OSBORN, Chicago, Ill., assignor to Chicago Malleable Castings Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1921. Serial No. 450,064. Original No. 1,362,732, dated Dec. 21, 1920, Serial No. 369,451, filed Mar. 29, 1920. 5 Claims. (Cl. 238—304.)

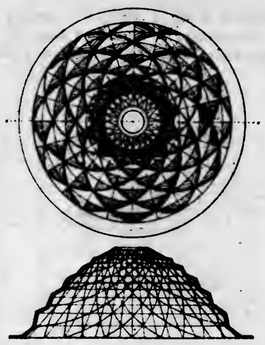


1. A tie plate for rails comprising a body having elongated spike holes extending transversely thereof to receive a spike in the outer end of each hole, and spike-plugs fitting between the spikes and rail-base, each plug having flanges at its base to engage the lower end of its spike-hole, and having a wing of a size to pass through the spike-hole from below in alinement with the length thereof to overlie the base when the spike is driven to place.

15,168. [WITHDRAWN.]

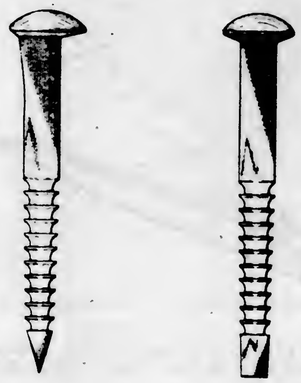
DESIGNS.

58,453. COTTER-PIN PULLER. CARL O. ANDERSON, Brooklyn, N. Y. Filed Mar. 5, 1921. Serial No. 450,110. Term of patent 7 years.



The ornamental design for a cotter pin puller as shown.

58,454. WRENCH. VICTOR A. ANDERSON, Elmwood Park, Ill. Filed Mar. 30, 1921. Serial No. 457,057. Term of patent 7 years.

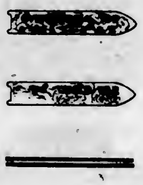


The ornamental design for a wrench, as shown.

58,455. HEADLIGHT-REFLECTOR. GEORGE A. ARNDT, Chicago, Ill., assignor to Emil G. Johanson, Chicago, Ill. Filed Oct. 14, 1919. Serial No. 330,615. Term of patent 7 years.

The ornamental design for a headlight reflector as shown.

58,456. SPIKE. FREDERICK C. BAUER, Sr., Camden, N. J. Filed July 9, 1920. Serial No. 395,165. Term of patent 14 years.



The ornamental design for a spike as shown.

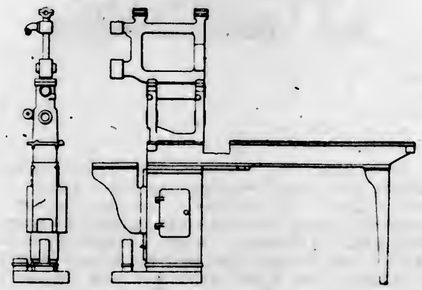
58,457. HANDLE FOR A POCKET-KNIFE. CARL F. BIERBACH, Rochester, N. Y. Filed Dec. 27, 1920. Serial No. 433,496. Term of patent 3½ years.

The ornamental design for a handle for a pocket-knife, as shown.

58,458. HANDLE FOR A POCKET-KNIFE. CARL F. BIERBACH, Rochester, N. Y. Filed Dec. 27, 1920. Serial No. 433,497. Term of patent 3½ years.

The ornamental design for a handle for a pocket knife, as shown.

58,459. BROCADE FABRIC. JAMES H. BUNTING, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,305. Term of patent 3½ years.

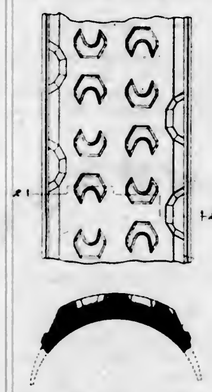


The ornamental design for a brocade fabric, as shown.

58,460. TENSION-SPRING FOR SCISSORS AND SHEARS, OR SIMILAR ARTICLE. JOHN J. CONWAY, Bridgeport, Conn., assignor to The Acme Shear Company, a Corporation of Connecticut. Filed Apr. 18, 1921. Serial No. 462,454. Term of patent 14 years.

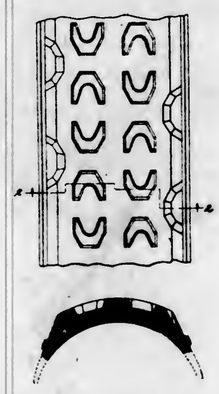
The ornamental design for a tension spring for scissors and shears, or similar article, substantially as shown.

58,461. FRAME FOR COMBINATION LATHE, DRILLING, AND-MILLING MACHINES. HUBERT DALTON, New York, N. Y. Filed Feb. 18, 1921. Serial No. 446,184. Term of patent 14 years.



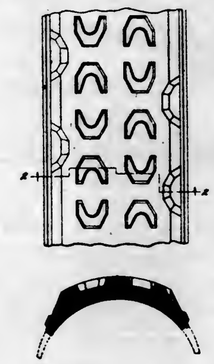
The ornamental design for frames for combination lathe, drilling and milling machines, as shown.

58,462. TOY BLOCK. HENRY C. DIEFFENBACH, Dayton, Ohio. Filed Apr. 22, 1921. Serial No. 463,681. Term of patent 14 years.



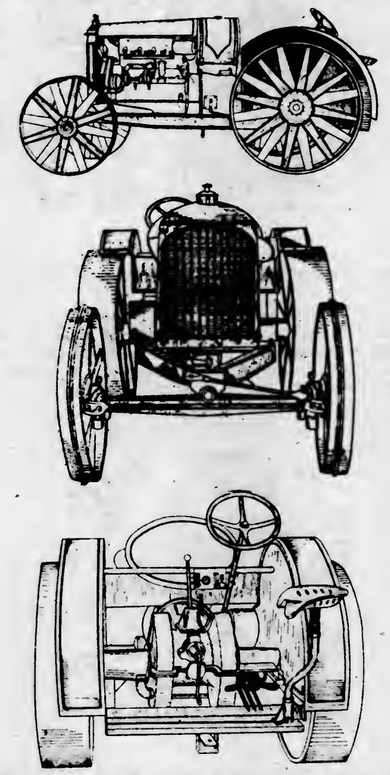
The ornamental design for a toy block, substantially as shown.

58,463. NON-SKID TIRE-TREAD. ELMER N. DOWNES, Charlotte, N. C., assignor to McClaren Rubber Company, Charlotte, N. C., a Corporation of Delaware. Filed Mar. 16, 1920. Serial No. 366,422. Term of patent 14 years.



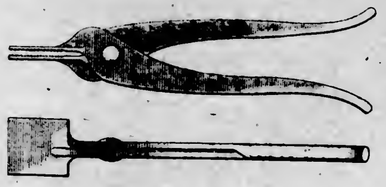
The ornamental design for a non-skid tire tread as shown.

58,464. NON-SKID TIRE-TREAD. ELMER N. DOWNES, Charlotte, N. C., assignor to McClaren Rubber Company, Charlotte, N. C., a Corporation of Delaware. Filed Mar. 16, 1920. Serial No. 366,423. Term of patent 14 years.



The ornamental design for a non-skid tire tread as shown.

58,465. NON-SKID TIRE-TREAD. ELMER N. DOWNES, Charlotte, N. C., assignor to McClaren Rubber Company, Charlotte, N. C., a Corporation of Delaware. Filed Mar. 16, 1920. Serial No. 366,424. Term of patent 14 years.



The ornamental design for a non-skid tire-tread as shown.

58,466. TRACTOR. GEORGE WILLIS DUNHAM, New York, N. Y., assignor to Graham Brothers, Evansville, Ind., a Corporation of Indiana. Filed Mar. 29, 1920. Serial No. 369,755. Term of patent 7 years.

The ornamental design for a tractor, substantially as shown.

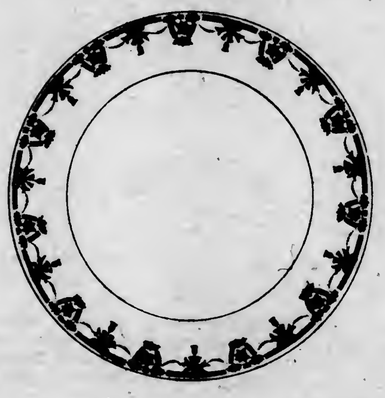
58,467. PLIERS. FRED S. DURHAM, Allentown, Pa., assignor to Bonney Vise & Tool Works, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1921. Serial No. 439,027. Term of patent 14 years.

The ornamental design for pliers, as shown.

58,468. TEXTILE FABRIC. ADOLPHE EISELE, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,292. Term of patent 3½ years.

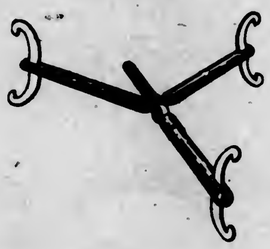
The ornamental design for a textile fabric, as shown.

58,469. TEXTILE FABRIC. ADOLPHE EISELE, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,293. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

58,470. TEXTILE FABRIC. ADOLPHE EISELE, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,294. Term of patent 3½ years.

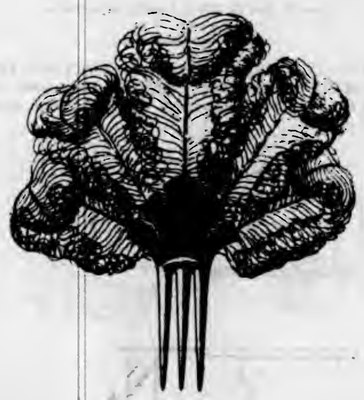


The ornamental design for a textile fabric, as shown.

58,471. PLATE OR SIMILAR ARTICLE. MARTIN M. ENGELHARDT, New York, N. Y., assignor to L. Barth & Son, a Partnership composed of Leopold Barth and Harry Barth. Filed Sept. 25, 1919. Serial No. 326,401. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

58,472. TIRE-TOOL. ANDREW J. ENGLISH and CHARLES J. HART, Cincinnati, Ohio. Filed Mar. 9, 1921. Serial No. 450,965. Term of patent 3½ years.

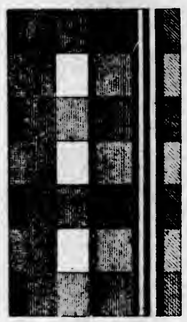


The ornamental design for a tire tool, as shown.

58,473. PERCOLATING-URN. EDWARD A. FARR, Meriden, Conn., assignor to Manning, Bowman & Co., Meriden, Conn., a Corporation of Connecticut. Filed Feb. 3, 1921. Serial No. 442,303. Term of patent 7 years.

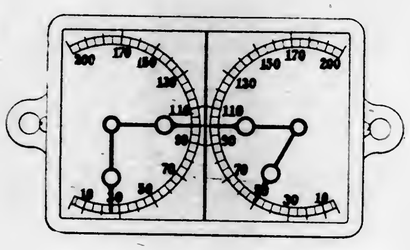
The ornamental design for a percolating urn, as shown.

58,474. COMB. BENJAMIN J. FOSTER, New York, N. Y., assignor to Samstag & Hilder Bros., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,301. Term of patent 14 years.



The ornamental design for a comb as shown.

58,475. NARROW FABRIC. DAVID C. FRANK, New York, N. Y., assignor to Pelgram & Meyer, New York, N. Y., a Firm. Filed Oct. 28, 1920. Serial No. 420,301. Term of patent 7 years.



The ornamental design for a narrow fabric substantially as shown and described.

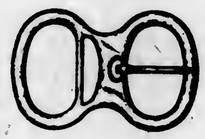
58,476. NARROW FABRIC. DAVID C. FRANK, New York, N. Y., assignor to Pelgram & Meyer, New York, N. Y., a Firm. Filed Oct. 28, 1920. Serial No. 420,302. Term of patent 3½ years.

The ornamental design for a narrow fabric substantially as shown and described.

58,477. PRESSURE-INDICATING GAGE. CHARLES GASTON, Chicago, Ill., assignor to The Ashton Valve Company, Boston, Mass., a Corporation of Massachusetts. Filed June 24, 1920. Serial No. 391,546. Term of patent 14 years.

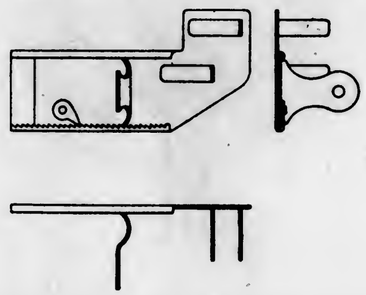
The ornamental design for a pressure indicating gage, as shown.

58,478. TIRE-TREAD. WARREN S. GAUNTT, Kansas City, Mo. Filed July 29, 1920. Serial No. 399,911. Term of patent 14 years.



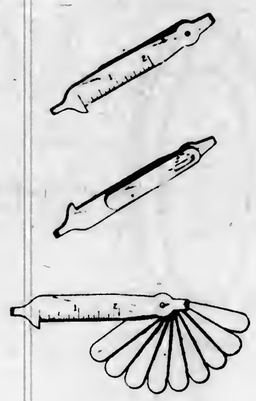
The ornamental design for a tire tread as shown.

58,479. HANDLE OF A SPOON, FORK, OR SIMILAR ARTICLE. JOHN H. HARMSTONE, Attleboro, Mass., assignor to Fessenden and Company, Inc., Providence, R. I., a Corporation of Rhode Island. Filed July 21, 1920. Serial No. 398,029. Term of patent 7 years.



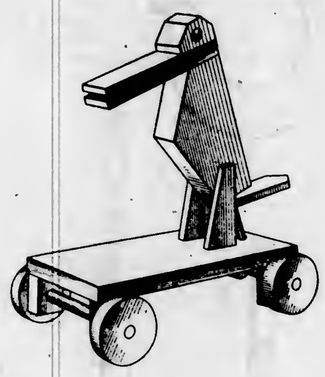
The ornamental design for the handle of a spoon, fork, or similar article, as shown.

58,480. BUCKLE. LEOPOLD HAUSER, New York, N. Y., assignor to Hauser & Weil, New York, N. Y., a Copartnership composed of Leopold Hauser and Simon Weil. Filed Dec. 24, 1920. Serial No. 433,076. Term of patent 14 years.



The ornamental design for a buckle as shown.

58,481. COMBINED SHADE AND CURTAIN-POLE BRACKET. FREDERICK L. HAWKINS, Mishawaka, Ind. Filed Dec. 23, 1920. Serial No. 432,883. Term of patent 7 years.



The ornamental design for a combined shade and curtain pole bracket as shown.

58,482. COMBINATION-TOOL. VERNIE R. HELIN, Chicago, Ill. Filed Mar. 11, 1921. Serial No. 451,591. Term of patent 7 years.

The ornamental design for a combination tool, as shown.

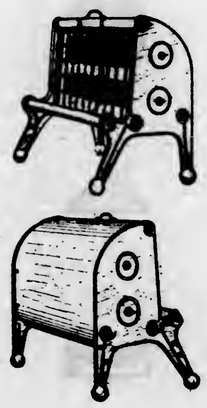
58,483. TOY. RAYMOND L. HERMAN, New York, N. Y., assignor to Margaret S. Bartlett, East Orange, N. J. Filed Mar. 16, 1921. Serial No. 452,761. Term of patent 7 years.

The ornamental design for a toy, as shown.

58,484. BUTTON. WILLIAM W. HOBE, New York, N. Y. Filed Sept. 29, 1920. Serial No. 413,617. Term of patent 3½ years.

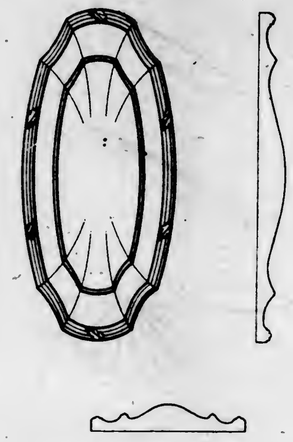
The ornamental design for a button as shown.

58,485. BUTTON. WILLIAM W. HOBE, New York, N. Y. Filed Sept. 29, 1920. Serial No. 413,618. Term of patent 3½ years.



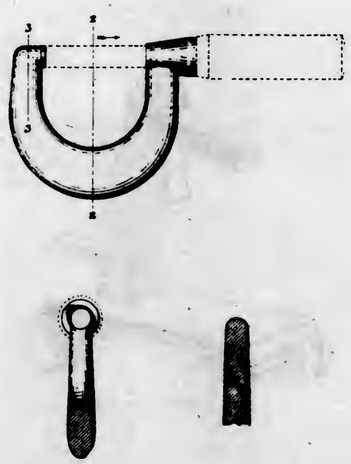
The ornamental design for a button as shown.

58,486. BUTTON. William W. Hobb, New York, N. Y. Filed Sept. 29, 1920. Serial No. 413,619. Term of patent 3½ years.



The ornamental design for a button as shown and described.

58,487. ELECTRIC HEATER. Andrew J. Holmes, Tacoma, Wash. Filed Sept. 14, 1920. Serial No. 410,336. Term of patent 14 years.

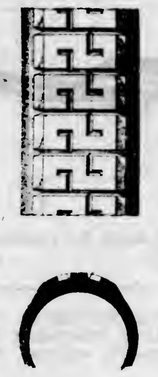


The ornamental design for an electric heater as shown.

58,488. PLATE FOR LIGHTING-FIXTURES. Hamilton T. Howell, New York, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Dec. 20, 1920. Serial No. 432,118. Term of patent 14 years.

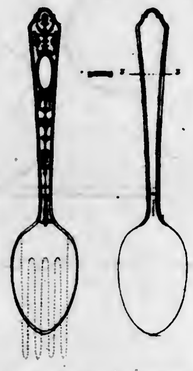
The ornamental design for a plate for lighting fixtures as shown.

58,489. HANDLE FOR A MICROMETER-CALIPER. Fernando Oscar Jaques, Jr., Providence, R. I., assignor to The Central Tool Company, Cranston, R. I., a Corporation of Rhode Island. Filed May 29, 1920. Serial No. 385,373. Term of patent 14 years.



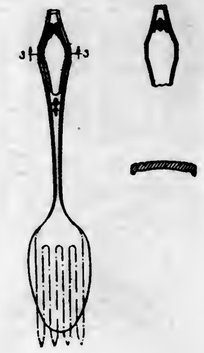
The ornamental design for a handle of a micrometer caliper, as shown.

58,490. VEHICLE. Frederick A. Johannecht, Birmingham, Ala. Filed Feb. 28, 1921. Serial No. 447,332. Term of patent 14 years.



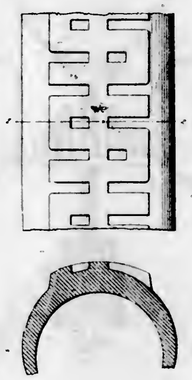
The ornamental design for a vehicle, as shown.

58,491. TIRE-TREAD. Ernest F. Kling, Batavia, N. Y., assignor to The Batavia Rubber Company, Batavia, N. Y. Filed Jan. 21, 1921. Serial No. 439,037. Term of patent 7 years.



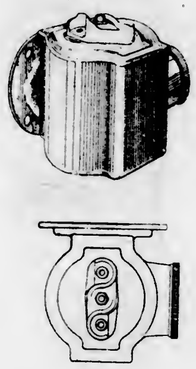
The ornamental design for a tire tread, substantially as shown.

58,492. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. Fredrick W. Koonz, Greenfield, Mass., assignor to Rogers, Lunt & Bowlen Company, Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1921. Serial No. 443,480. Term of patent 14 years.



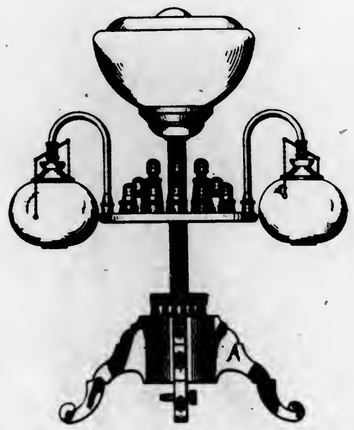
The ornamental design for a handle for a spoon, fork, or similar article as shown.

58,493. SPOON, FORK, OR SIMILAR ARTICLE. Thomas B. Lashar, Fairfield, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Oct. 4, 1920. Serial No. 414,682. Term of patent 7 years.



The ornamental design for a spoon, fork, or similar article, substantially as shown.

58,494. TIRE. Emery Leslie Lawlor, Youngstown, Ohio. Filed Dec. 9, 1920. Serial No. 429,591. Term of patent 7 years.

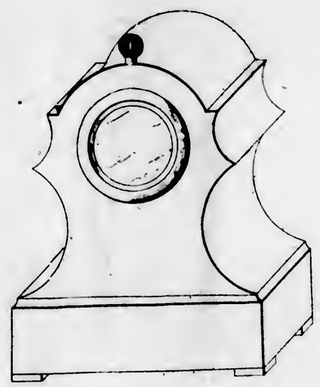


The ornamental design for a tire, as shown.

58,495. CASING OF AN INDUCTION-COIL. THOMAS L. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 24, 1917. Serial No. 208,718. Term of patent 14 years.

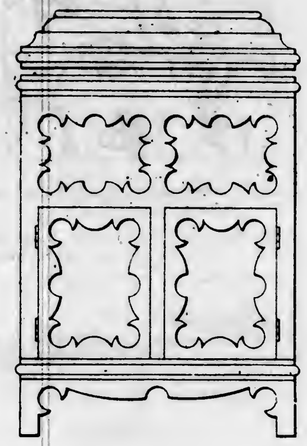
The ornamental design for a casing of an induction-coil, as shown.

58,496. ILLUMINATING DEVICE. GIUSEPPE MANNINO, Philadelphia, Pa. Filed Dec. 14, 1920. Serial No. 430,762. Term of patent 7 years.

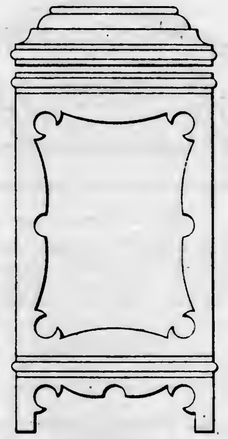


The ornamental design for an illuminating device, as shown.

58,497. LIGHTING-FIXTURE ARM. ABRAHAM MILLER, New York, N. Y. Filed Dec. 28, 1920. Serial No. 433,653. Term of patent 3½ years.

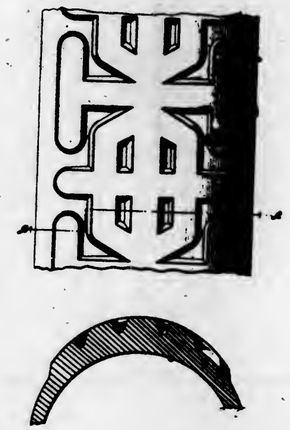


The ornamental design for a lighting fixture arm, substantially as shown.

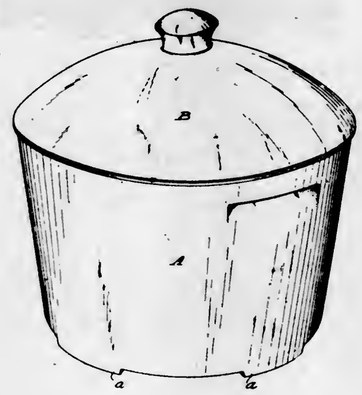


58,498. WATCH-MOVEMENT CASE. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Aug. 16, 1920. Serial No. 403,945. Term of patent 3½ years.

The ornamental design for a watch-movement-case, as shown.



58,499. PHONOGRAPH-CABINET. SISSAG K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Mar. 28, 1921. Serial No. 456,500. Term of patent 3½ years.

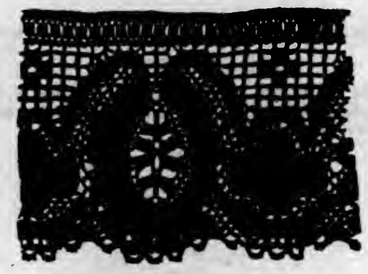


The ornamental design for a phonograph-cabinet as shown.

58,500. RUBBER TIRE. CLARENCE S. PARK, East Butler, Pa., assignor to Corona Cord Tire Company, East Butler, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1920. Serial No. 424,301. Term of patent 14 years.

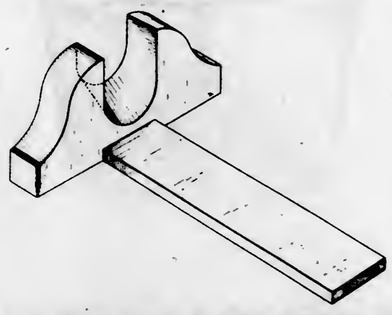
The ornamental design for a rubber tire, as shown.

58,501. ICELESS REFRIGERANT. EPHRAIM S. PEASE, Buffalo, N. Y. Filed July 6, 1920. Serial No. 394,364. Term of patent 7 years.



The ornamental design of an iceless refrigerant, as shown and described.

58,502. NAIL-SET. WILLIAM A. PECK, New Haven, Conn., assignor to The Simpson-Peck Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 5, 1921. Serial No. 450,092. Term of patent 14 years.



The ornamental design for a nail set as shown.

58,503. LACE. GEORGE RADFORD, Phenix, R. I., assignor to Richmond Lace Works, Alton, R. I., a Corporation of Maine. Filed Feb. 16, 1921. Serial No. 445,560. Term of patent 7 years.

The ornamental design for lace, as shown.

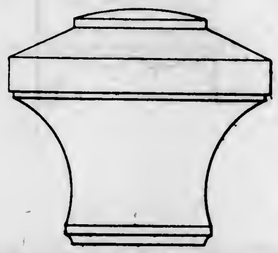
58,504. TIRE-RACK. WILLIAM T. RANCEL, Oakland, Calif. Filed Feb. 9, 1921. Serial No. 443,711. Term of patent 14 years.

The ornamental design for a tire rack, as shown.

58,505. TEXTILE FABRIC. WILLIAM G. REITH, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,312. Term of patent 3½ years.

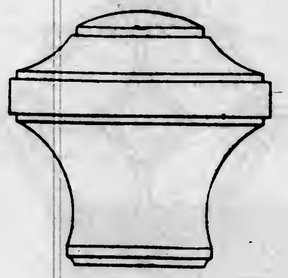
The ornamental design for a textile fabric, as shown.

58,506. SEESAW. GUS SCHALLER, St. Louis, Mo. Filed Mar. 10, 1921. Serial No. 451,300. Term of patent 14 years.



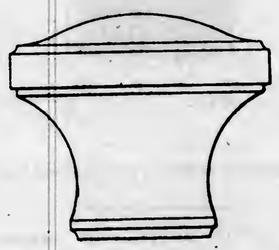
The ornamental design for a seesaw, as shown.

58,507. MUSIC-ROLL-REPAIR DEVICE. JULIUS SCHIRRA, Pittsburgh, Pa. Filed Nov. 20, 1920. Serial No. 425,566. Term of patent 3½ years.



The ornamental design for a music roll repair device as shown.

58,508. CAP FOR POSTS. ABRAHAM J. SCHULTZ, Newark, N. J., assignor to Colonial Stamping Company, Inc., a Corporation of New Jersey. Filed Feb. 21, 1920. Serial No. 360,396. Term of patent 3½ years.

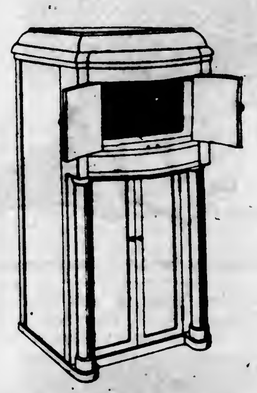


The ornamental design for a cap for posts as shown.

58,509. CAP FOR POSTS. ABRAHAM J. SCHULTZ, Newark, N. J., assignor to Colonial Stamping Company, Inc., a Corporation of New Jersey. Filed Feb. 21, 1920. Serial No. 360,397. Term of patent 3½ years.

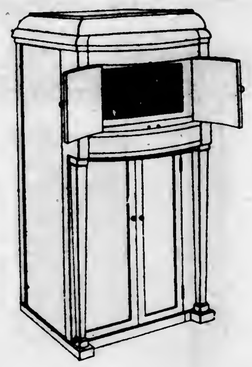
The ornamental design for a cap for posts as shown.

58,510. CAP FOR POSTS. ABRAHAM J. SCHULTZ, Newark, N. J., assignor to Colonial Stamping Company, Inc., a Corporation of New Jersey. Filed Feb. 21, 1920. Serial No. 360,398. Term of patent 3½ years.



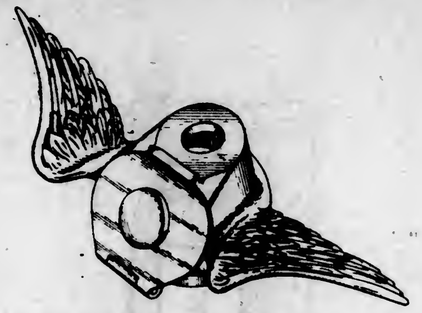
The ornamental design for a cap for posts as shown.

58,511. EMBLEM, BADGE, BUTTON, PIN, FOB, RING, OR LIKE ARTICLE OF MANUFACTURE. COURTNEY W. SHROPSHIRE, Birmingham, Ala., assignor to International Association of Civitan Clubs, Birmingham, Ala., a Corporation of Alabama. Filed Aug. 27, 1920. Serial No. 406,492. Term of patent 14 years.



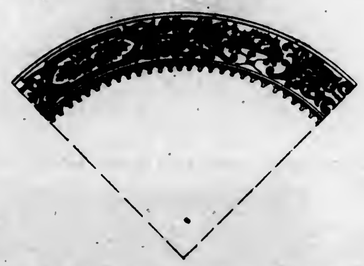
The ornamental design for an emblem, badge, button, pin, fob, ring, or like article of manufacture as shown.

58,512. TALKING-MACHINE CASE. FRANK W. STECK, Buffalo, N. Y. Filed Jan. 22, 1921. Serial No. 430,303. Term of patent 14 years.



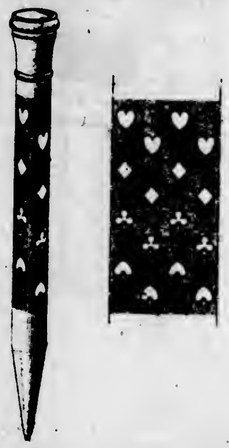
The ornamental design for a talking machine case, as shown.

58,513. TALKING-MACHINE CASE. FRANK W. STECK, Buffalo, N. Y. Filed Jan. 22, 1921. Serial No. 439,304. Term of patent 14 years.



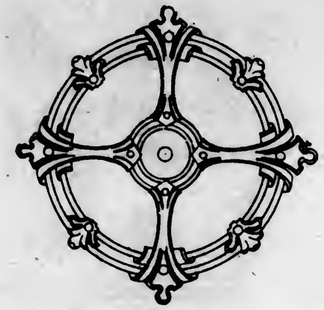
The ornamental design for a talking machine case, as shown.

58,514. RADIATOR-CAP. HARRY J. TAUSCHER, Chicago, Ill., assignor to Up to Date Machine Works, Chicago, Ill. Filed Apr. 18, 1921. Serial No. 462,461. Term of patent 3½ years.



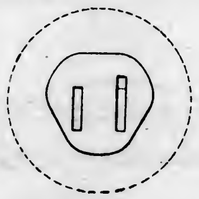
The ornamental design for a radiator cap, as shown.

58,515. DISH OR SIMILAR ARTICLE. JUSTIN THARALD, Weehawken, N. J. Filed Feb. 25, 1921. Serial No. 447,889. Term of patent 14 years.



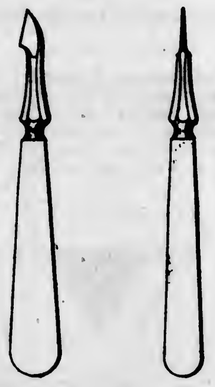
The ornamental design for a dish or similar article, as shown.

58,516. PEN OR PENCIL CASE. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 17, 1921. Serial No. 438,011. Term of patent 14 years.



The original design for a pen or pencil case as shown.

58,517. PLATE FOR LIGHTING-FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to Artcraft Fixture Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 11, 1920. Serial No. 416,334. Term of patent 7 years.



The ornamental design for a plate for lighting fixtures, as shown.

58,518. ELECTRICAL RECEPTACLE. ERNEST CANTELO WHITE, New York, N. Y., assignor to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1921. Serial No. 437,364. Term of patent 14 years.

The ornamental design of an electrical receptacle, as shown.

58,519. MANICURE IMPLEMENT. BERNARD WIGDER, Newark, N. J. Filed Dec. 4, 1920. Serial No. 428,397. Term of patent 7 years.

The ornamental design for a manicure implement as shown.

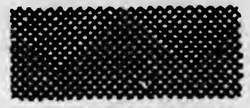
58,520. SPOON-HANDLE. THEODOSIUS ALBERT WILLIAMS, Battle Ground, Wash. Filed Mar. 29, 1919. Serial No. 286,179. Term of patent 14 years.

The ornamental design for a spoon-handle as shown.

58,521. KNITTED OR NETTED FABRIC. SIDNEY WORMS, New Rochelle, N. Y., assignor to Franklin Knitting Mills, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,810. Term of patent 14 years.

The ornamental design for a knitted or netted fabric substantially as shown.

58,522. KNITTED OR NETTED FABRIC. SIDNEY WORMS, New Rochelle, N. Y., assignor to Franklin Knitting Mills, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,811. Term of patent 14 years.

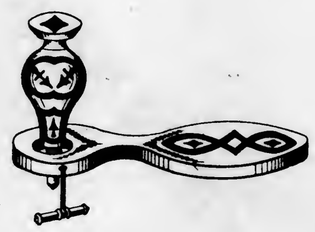


The ornamental design for a knitted or netted fabric substantially as shown.

58,523. KNITTED OR NETTED FABRIC. SIDNEY WORMS, New Rochelle, N. Y., assignor to Franklin Knitting Mills, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,812. Term of patent 14 years.

The ornamental design for a knitted or netted fabric substantially as shown.

58,524. KNITTED OR NETTED FABRIC. SIDNEY WORMS, New Rochelle, N. Y., assignor to Franklin Knitting Mills, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,814. Term of patent 14 years.



The ornamental design for a knitted or netted fabric substantially as shown.

58,525. KNITTED OR NETTED FABRIC. SIDNEY WORMS, New Rochelle, N. Y., assignor to Franklin Knitting Mills, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,815. Term of patent 14 years.

The ornamental design for a knitted or netted fabric substantially as shown.

58,526. WHIRLING TOY. JOSEPH ZBIKOWSKI, Cleveland, Ohio. Filed Mar. 9, 1921. Serial No. 450,983. Term of patent 14 years.

The ornamental design for a whirling toy as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 26, 1921.

[PUBLISHED AUGUST 8, 1921.]

Claims use since 1882.

Ser. No. 138,764. (CLASS 17. TOBACCO PRODUCTS.) HAVANA CIGAR AND TOBACCO FACTORIES, LTD., New York, N. Y. Filed Oct. 25, 1920.

No claim is made to the word "Habana" apart from the mark shown in the drawing.
Particular description of goods.—Cigars.
Claims use since 1882.

Ser. No. 138,961. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) S. ROBERT SCHWARTZ & BRO., New York, N. Y. Filed Oct. 29, 1920.

No claim is made to the words "Trade Mark" and "Adjustable Lamps" apart from the mark shown in the drawing.
Particular description of goods.—Portable Electric Lamps.
Claims use since Oct. 11, 1920.

Ser. No. 139,135. (CLASS 12. CONSTRUCTION MATERIALS.) VELVETILE FLOOR CO., Chicago, Ill. Filed Nov. 3, 1920.

No exclusive claim being made to the words "Magnesite Stucco" except as a part of said trade-mark.
Particular description of goods.—Stucco Composition.
Claims use since on or about July 1, 1920.

Ser. No. 139,136. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) EDWIN L. WIEGAND, Pittsburgh, Pa. Filed Nov. 3, 1920.

CHROMALOX

Particular description of goods.—Electrical Heating and Resistor Elements, Particularly Electric-Sadiron-Heating Units.
Claims use since Oct. 16, 1920.

Ser. No. 139,308. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) A. J. REACH COMPANY, Philadelphia, Pa. Filed Nov. 6, 1920.

EAGLE

Particular description of goods.—Golf-Balls.
Claims use since about Oct. 1, 1919.

Ser. No. 139,398. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) E. I. HORSMAN & ÆTNA DOLL CO. INC., New York, N. Y. Filed Nov. 9, 1920.

"PINAFORE"

Particular description of goods.—Dolls.
Claims use since Oct. 29, 1920.

Ser. No. 139,630. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REDHILL MFG. CO., Pittsburgh, Pa. Filed Nov. 13, 1920.

The drawing shows the conventional lining for red, no claim being made to the words "21 Doses" and "Pittsburgh, Pa."
Particular description of goods.—A Medicine for Use in the Treatment of Indigestion and Dyspepsia.
Claims use since Sept. 11, 1920.

Ser. No. 139,689. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) WEXLER, GOLDSTEIN & CO., Philadelphia, Pa. Filed Nov. 15, 1920.

Hug'm and Squeez'm

Particular description of goods.—Dolls.
Claims use since Oct. 21, 1921.

Ser. No. 139,706. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) COLUMBIA POWDER PUFF CO., New York, N. Y. Filed Nov. 16, 1920.

PINK LADY

Particular description of goods.—Powder-Puffs.
Claims use since June 1, 1920.

Ser. No. 139,913. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) A. G. SPALDING & BROS., New York, N. Y. Filed Nov. 20, 1920.

SKY-IRON

Particular description of goods.—Golf-Clubs.
Claims use since about June 15, 1920.

Ser. No. 140,103. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) EASTERN TUBE AND TOOL COMPANY, INC., Brooklyn, N. Y. Filed Nov. 24, 1920.

Ettco STEEL

"Steel" being disclaimed apart from the mark as shown.
Particular description of goods.—Armored Conductors and Flexible Steel Conduits.
Claims use since Nov. 8, 1920.

Ser. No. 140,193. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) MAY B. MORAN, Kansas City, Mo. Filed Nov. 26, 1920.

WEE WEE

Particular description of goods.—Dolls.
Claims use since Feb. 1, 1920.

Ser. No. 140,379. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) JULIA E. GREENE, Philadelphia, Pa. Filed Nov. 29, 1920.

BEDDY-BYE

Particular description of goods.—Rag Dolls.
Claims use since on or about Oct. 12, 1920.

Ser. No. 140,395. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OTTO MAUSERT, San Francisco, Calif. Filed Nov. 29, 1920.

PLANTLAX

Particular description of goods.—Liver-Tonic.
Claims use since Nov. 12, 1920.

Ser. No. 140,638. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) LOU J. EPPINGER, Detroit, Mich. Filed Dec. 6, 1920.

DARDEVLE

Particular description of goods.—Artificial Fishing-Bait.
Claims use since December, 1918.

Ser. No. 140,834. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE GOUDEY GUM CO., Boston, Mass. Filed Dec. 9, 1920.

Oh Boy

Particular description of goods.—Chewing-Gum.
Claims use since Oct. 25, 1918.

Ser. No. 140,877. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DOCTOR'S ESSENTIAL FOODS CO., Orange, N. J. Filed Dec. 10, 1920.

No claim being made to the pictorial representation of the bread nor to the word "Bread."
Particular description of goods.—Bread.
Claims use since Jan. 15, 1920.

Ser. No. 140,955. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) JORDAN MARSH COMPANY, Boston, Mass. Filed Dec. 11, 1920.

"Avona"

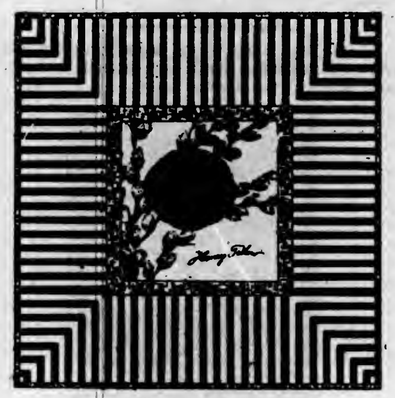
Particular description of goods.—Leather Foot-Balls.
Claims use since Nov. 29, 1920.

Ser. No. 141,742. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) THE ADOLPH COORS B. & M. COMPANY, Golden, Colo. Filed Jan. 3, 1921.

Particular description of goods.—Non-Alcoholic Maltless Cereal Beverages Sold as Soft Drinks.
Claims use since about March, 1915.

Ser. No. 141,985. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD ELSWORTH LEEPER, Council Bluffs, Iowa. Filed Jan. 8, 1921.

Wa-Sca-Na



Particular description of goods.—Medicines Used in Cases of Stomach Trouble, Rheumatism, Catarrh, Pimples, Boils, Heart Trouble, Headache, Nervousness, and Run-Down and Worn-Out Systems.
Claims use since Dec. 15, 1910.

Particular description of goods.—Coffee.
Claims use since the spring of 1902.

145,279. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) MINNEAPOLIS HEAT REGULATOR CO., Minneapolis, Minn. Filed Feb. 16, 1921. Serial No. 143,653.

MINNEAPOLIS

Particular description of goods.—Thermostatic Heat-Regulators.
Claims use since about 1912.

145,280. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) MINNEAPOLIS HEAT REGULATOR CO., Minneapolis, Minn. Filed Feb. 25, 1921. Serial No. 144,033.

The Heart of the Heating Plant

Particular description of goods.—Thermostatic Heat-Regulators.
Claims use since about 1912.

145,281. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) NEWPORT OPTICAL MANUFACTURING CO., Brooklyn, N. Y. Filed Mar. 18, 1921. Serial No. 144,937.

Particular description of goods.—Hinges.
Claims use since January, 1919.

145,282. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE PAINE COMPANY, Chicago, Ill. Filed Feb. 28, 1921. Serial No. 144,151.

PAINE

Particular description of goods.—Expansion-Shells, Toggle-Bolts, Fixture-Hangers, and Contractible Cores.
Claims use since July 2, 1912.

145,283. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) F. A. PATRICK & CO., Duluth, Minn. Filed Jan. 5, 1921. Serial No. 141,880.

Patrick DULUTH

Particular description of goods.—Fabric Emblems, Bandeaux, Belting for Personal Wear, Button-Molds, Combs, Dress-Shields, Corset-Shields, Collar-Supporters, Cuff-Holders, Snap-Fasteners, Corset-Clasps, Hooks and Eyes, Crochet-Hooks, Hand-Darners, Needles for Hand-Sewing, Drapery-Pins, Embroidery-Stilettos, Embroidery-Hoops, Tatting-Shuttles, Pincushions, Dress-Weights, Featherbone, Corset-Laces, Shoe-Laces, Skirt-Banding, Binding, Fringe, Gimp, Ruche, Non-Electric Curling-Irons, Fans for Personal Use, and the Following Articles Made of Either Base Metal or Composition, Namely: Barrettes, Buckles, Buttons, Button-Bars, Button-Rings, Collar-Buttons, Hatpins, Fancy Pins, Hairpins, Safety-Pins, Toilet-Pins, and Thimbles.
Claims use since Apr. 2, 1910.

145,284. (CLASS 37. PAPER AND STATIONERY.) PAPER MANUFACTURING CO. INC., Philadelphia, Pa. Filed Apr. 7, 1921. Serial No. 145,855.

PERFECTION DIE WIPING PAPER

Particular description of goods.—Paper for Wiping Ink from the Faces of Dies.
Claims use since Dec. 1, 1905.

145,285. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PEERLESS KEY CO., INC., New York, N. Y. Filed Mar. 21, 1921. Serial No. 145,039.

PEERLESS

Particular description of goods.—Typewriter-Keys, Twirler-Rings, and Shock-Absorbers.
Claims use since January, 1914.

145,286. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) HERBERT C. REES, San Antonio, Tex. Filed Dec. 19, 1919. Serial No. 126,260.

"Kent-break" Rimless Glasses

Particular description of goods.—Eyeglasses and Spectacles.
Claims use since Dec. 6, 1919.

145,287. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ROBERTS AND SCHAEFER COMPANY, Chicago, Ill. Filed June 1, 1920. Serial No. 133,161.

MARCUS HORIZONTAL PICKING TABLE SCREEN

Particular description of goods.—The Marcus Horizontal Picking-Table Screen for Sorting and Conveying Coal or other Materials.
Claims use since July 18, 1912.

145,288. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) MAX ROBINS, Chicago, Ill. Filed June 25, 1920. Serial No. 134,219.

Particular description of goods.—Non-Alcoholic, Maltless Beverages.
Claims use since July 3, 1919.

145,289. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ROYERSFORD FOUNDRY & MACHINE CO., Royersford, Pa. Filed Mar. 11, 1921. Serial No. 144,637.

SELL'S

Particular description of goods.—Roller-Bearings.
Claims use since Feb. 10, 1910.

145,290. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HARRY F. SIMON, New York, N. Y. Filed Mar. 1, 1921. Serial No. 144,206.

GUARANTEED SATISFACTION LINCOLN MADE LINCOLN BUILT LINCOLN TYPEWRITER CO. 280 BROADWAY NEW YORK, U.S.A.

Particular description of goods.—Typewriters.
Claims use since June 15, 1919.

145,291. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) CORA L. SCOVIL, New York, N. Y. Filed Mar. 1, 1921. Serial No. 144,205.

PATCH POSTER

Particular description of goods.—Display Devices in the Nature of Pictures Made of Textile Fabric.
Claims use since May 20, 1920.

145,292. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) A. STEINHARDT & BRO., New York, N. Y. Filed May 27, 1921. Serial No. 148,352.

Practical

Particular description of goods.—Hair-Curlers.
Claims use since 1912.

145,293. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) W. P. TANNER-GROSS & COMPANY, INC., New York, N. Y. Filed Jan. 31, 1920. Serial No. 127,814.

KEWAUNEE

Particular description of goods.—Cornmeal.
Claims use since Aug. 11, 1919.

145,294. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) UNITED STATES RUBBER COMPANY, New Brunswick, N. J., and New York, N. Y. Filed June 16, 1920. Serial No. 133,807.

Particular description of goods.—Golf-Balls.
Claims use since Apr. 1, 1920.

145,295. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE UNIVERSAL MACHINE COMPANY, Bowling Green, Ohio. Filed Apr. 4, 1921. Serial No. 145,725.

STANDARD

Particular description of goods.—Universal Joints and Bolt-Cutters.
Claims use since 1915 for universal joints and since 1911 for bolt-cutters.

145,296. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WERT MANUFACTURING COMPANY, Chicago, Ill. Filed Feb. 26, 1921. Serial No. 144,116.

PERFECT
FOR PERMANENCE

Particular description of goods.—Brick, Building-Block, and Tile-Making Machinery and Tools and Concrete-Mixers.
Claims use since Jan. 1, 1903.

145,297. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) WHITAKER-GLESSNER COMPANY, Wheeling, W. Va. Filed Mar. 12, 1921. Serial No. 144,696.

PORTSMOUTH-IRON

Particular description of goods.—Iron and Steel Sheets.
Claims use since July, 1911.

145,298. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) WHITAKER-GLESSNER COMPANY, Wheeling, W. Va. Filed Mar. 12, 1921. Serial No. 144,697.

OHIO METAL

Particular description of goods.—Iron and Steel Sheets.
Claims use since July, 1911.

145,299. (CLASS 17. TOBACCO PRODUCTS.) EUGENE SPENCER WILSON, Houston, Tex. Filed Sept. 11, 1920. Serial No. 137,098.

A GOOD SMOKE

Particular description of goods.—Cigars.
Claims use since Aug. 1, 1919.

145,300. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE A. A. WOOD & SONS COMPANY, Atlanta, Ga. Filed Nov. 18, 1920. Serial No. 139,823.

"EDGE-CUT"

Particular description of goods.—Files.
Claims use since Mar. 27, 1916.

145,301. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WOOD TURRET MACHINE CO., Brazil, Ind. Filed Mar. 1, 1921. Serial No. 144,211.

THE TILTED TURRET

Particular description of goods.—Turret-Lathes and Screw-Machines.
Claims use since July 15, 1907.

LABELS

REGISTERED JULY 26, 1921.

23,120.—*Title:* "HANDI-HANGER BROOM." (For Brooms and Whisk-Brooms.) ACME BROOM COMPANY, Chicago, Ill. Filed February 21, 1921.

23,121.—*Title:* "BON SANTÉ OINTMENT." (For Boxes Containing Ointment.) BON SANTÉ COMPANY, De Land, Fla. Filed January 20, 1921.

23,122.—*Title:* "BON SANTÉ BAUME (GOOD HEALTH BALM)." (For Boxes Containing Medicine for Stomach Trouble.) BON SANTÉ COMPANY, De Land, Fla. Filed January 20, 1921.

23,123.—*Title:* "CALIGRAPO." (For Concentrated Grape Products in the Form of Grape Syrups.) CALIFORNIA GRAPE PRODUCTS CO., Ukiah, Calif. Filed April 5, 1921.

23,124.—*Title:* "TRUSTMENT." (For Printed Matter, Insurance Policies, Shares of Stock, Bonds, and other Certificates of Indebtedness.) FRANK J. COOPER, San Francisco, Calif. Filed December 22, 1920.

23,125.—*Title:* "SMILING BABY." (For Infants' Bath-Robes.) FEDERAL UNDERWEAR CO., New York, N. Y. Filed August 5, 1920.

23,126.—*Title:* "MELROSINE." (For Insecticides for the Destruction of Rose-Bugs.) GARDEN CHEMICAL CO. INC., New York, N. Y. Filed February 5, 1921.

23,127.—*Title:* "GORDON MILK AND CHOCOLATE SUPREME." (For Chocolate Bars.) THE GORDON CHOCOLATE CO., Cincinnati, Ohio. Filed March 7, 1921.

23,128.—*Title:* "CHOCOLATE MILK SUGAR ONLY." (For Candy.) THE GORDON CHOCOLATE COMPANY, Cincinnati, Ohio. Filed March 24, 1921.

23,129.—*Title:* "BETTER BLOCKS." (For Candy.) THE GORDON CHOCOLATE COMPANY, Cincinnati, Ohio. Filed March 24, 1921.

23,130.—*Title:* "HEILEMAN'S NEW STYLE LAGER." (For Cereal Beverages.) G. HEILEMAN BREWING CO., La Crosse, Wis. Filed March 19, 1920.

23,131.—*Title:* "$1 000 00 GUARANTEED RAT AND MICE KILLER." (For Cans Containing a Guaranteed Rat and Mice Killer.) B. HELLER & CO., Chicago, Ill. Filed January 29, 1921.

23,132.—*Title:* "$1 000.00 GUARANTEED ANT-BANE." (For Cans Containing a Guaranteed Ant-Killer.) B. HELLER & CO., Chicago, Ill. Filed January 29, 1921.

23,133.—*Title:* "$1 000.00 GUARANTEED ROACH KILLER." (For Cans Containing a Guaranteed Roach-Killer.) B. HELLER & CO., Chicago, Ill. Filed January 29, 1921.

23,134.—*Title:* "DEODORINE." (For Receptacles Containing Deodorine.) B. HELLER & CO., Chicago, Ill. Filed February 10, 1921.

23,135.—*Title:* "I-X-L." (For Receptacles Containing I-X-L, a Cleansing Preparation.) B. HELLER & CO., Chicago, Ill. Filed February 10, 1921.

5,683.—*Title:* "AFTER THE HIKE." (For Advertising Jell-O, a Dessert Preparation.) THE GENESEE PURE FOOD COMPANY, Le Roy, N. Y. Filed February 25, 1921.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

CLEMENT *v.* ROBERTS.

Decided June 6, 1921.

PATENTS—INTERFERENCE—DILIGENCE EXERCISED ON INVENTION NOT IN ISSUE INSUFFICIENT.

Where the issue of an interference related to an invention for use in a semi-automatic as well as in a full automatic telephone system, diligence by the junior party from January, 1905, to September, 1905, on a device to be used in a full automatic system is insufficient to overcome the senior party's constructive reduction to practice on August 31, 1905, as diligence was not exercised on the invention in issue, but on another invention.

Mr. H. A. Dodge and *Mr. W. G. McKnight* for Clement.

Mr. E. W. Adams, Mr. G. W. Rich, and *Mr. H. C. Workman* for Roberts.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents awarding priority of invention to appellee Roberts, the junior party.

The interference is in seven counts, of which count 1 is illustrative:

1. In an automatic telephone exchange system a plurality of subscribers' stations and metallic circuit lines extending thence to a central office, automatic switching apparatus for interconnecting the lines at the central office, a source of current connected in the metallic circuit of a subscriber's line, means at the substation to make and break the said metallic circuit at will, the makes and the breaks being of varying but predetermined duration, and means at the central office responsive to such makes and breaks in the metallic circuit to actuate, control and release the automatic switching apparatus and also to ring the wanted subscriber, substantially as described.

Roberts is conceded to have been the first to conceive the invention; hence, the case turns upon his diligence at or just before Clement came into the field. The dates are not controverted. Roberts is awarded January 24, 1905, for disclosure, based upon his blue print Exhibit 3 of that date, upon which the counts of the interference may be clearly read. He filed March 10, 1906.

We agree with the Board of Examiners-in-Chief that Clement constructively reduced the invention to practice in an application for patent filed August 31, 1905. His present application was filed December 9, 1905, but the former application disclosed the invention here in interference.

The Clement application relied upon for disclosure required the intervention of an operator at the central station to connect the call with an automatic first selector-switch, through which the call could be extended automatically to the number desired.

Roberts on the other hand contends that his system required a special form of interrupter in order that the impulses could be accurately timed. A drawing disclosing the interrupter was completed September 7, 1905. It is upon this that Roberts claimed the exercise of diligence at and prior to Clement's entrance into the field, but we find nothing in the claims limiting them to a full automatic system, or requiring a direct automatic connection between the calling party and the first selector switch. On this point the Board of Examiners-in-Chief said:

We do not find anything in the issues that limits them to a full automatic system or to a *direct* connection to the subscriber's line with the first selector switch. The claims cover only a means for controlling a series of automatic switches for extending a call over a metallic or two wire circuit from the calling subscriber to the called subscriber and when the central operator plugs in, the operation of the switches is exactly as specified in the issues. We regard the issues as covering specific means of operating the switches and extending the call whether it is used in a semi-automatic or a full automatic system.

Roberts had the invention of the issue complete in January, 1905, and the time he consumed until September of the same year was in perfecting an improvement not required by the present issue. This conduct on the part of an inventor does not constitute diligence. In *Lotterhand* v. *Hanson* (23 App. D. C., 372.) this court, considering a similar situation, said:

The excuse given by him (Lotterhand) or for him is that he desired to invent a new typewriter wherein to introduce his invention and thereby to avoid the necessity of using any of the existing typewriters. In other words, having made one invention, complete in itself and ready to be patented, if he did actually make it or have a conception of it, he deliberately waited for a year or two years until he should have time to make another invention to combine with it and therein to use it to the best advantage for himself. But this excuse cannot be accepted under any of the authorities as explaining the absence of diligence, while another man was actively in the field of invention at the same time. To delay one invention for the sake of another projected invention to be used in connection with it, and which might never be realized, cannot be construed in the patent law as an exercise of due diligence.

Following the policy of this court in giving the claims the broadest interpretation of which they will reasonably admit, (*Miel* v. *Young*, 29 App. D. C., 481; *Kirby* v. *Clements*, 44 App. D. C., 12; *Monte* v. *Dunkley*, 46 App. D. C., 70,) we are not at liberty to inject the limitation contended for by

Roberts into the claims to meet the exigencies of his case.

The decision is reversed.

Reversed.

Supreme Court of the District of Columbia.

MATTULLATH AEROPLANE COMPANY v. NEWTON, COMMISSIONER OF PATENTS.

Decided April 8, 1920.

PATENTS—BILL IN EQUITY UNDER SECTION 4915, REVISED STATUTES—TIME FOR FILING—EFFECT OF MOTION FOR REHEARING.

Under section 4894, Revised Statutes, one year from the date of a decision by the Court of Appeals of the District of Columbia is allowed in which to bring a suit in equity under section 4915, Revised Statutes; (*Gandy* v. *Marble*, 122 U. S., 432;) but this time runs from the date of the decision of the court affirming the decision of the Commissioner of Patents and is not suspended or extended by a motion for rehearing, since no provision for rehearing in such cases is found in the rules of the Patent Office, the court of appeals, or in any statute.

Mr. W. H. Swenarton for Mattullath Aeroplane Company.

Mr. T. A. Hostetler for the Commissioner of Patents.

GOULD, *J.*:

The bill in this case was filed on February 23, 1918, under section 4915, R. S. U. S., plaintiff seeking a decree that it was entitled to receive a patent for an invention connected with flying-machines. The bill recites that the original application was rejected by the Patent Office, April 25, 1916; that an appeal was taken to the Court of Appeals of the District of Columbia, and that "on or about the 26th day of February, 1917," the court of appeals transmitted to the Commissioner of Patents its mandate affirming the said decision.

The case is before this court on a motion to dismiss the bill on the ground that the suit was not brought within one year after the decision of the court of appeals refusing the patent. As heretofore stated on the face of the bill, it is alleged that the decision of the court of appeals, affirming the decision of the Commissioner of Patents rejecting plaintiff's application, was transmitted to the Commissioner of Patents "on or about the 26th day of February, 1917." As the bill was filed February 23, 1918, it would appear to have been filed within one year from the decision of the court of appeals.

It appears, however, from the brief filed for the Commissioner of Patents, that the decision of that official was affirmed by the court of appeals on February 5, 1917, and that would appear to be borne out by the record in the case (*in re Mattullath Aeroplane Company*, 46 App. D. C., 143) where the recital is that the case was decided by the court February 5, 1917, affirming the Commissioner in rejecting the application. This is not denied in the brief filed for the plaintiff, the latter's contention being that by reason of having filed on February 21, 1917, "a motion for re-argument and modification of the opinion," which was denied on February 24, 1917, the year during which he might file his bill under section 4915, did not begin to run until the latter date, thus bringing the filing of the present bill within the year from the refusal of the application, so that the question before the court is simply this:

Did the filing of the motion for re-argument by the plaintiff, and the denial thereof by the court, extend the time during which plaintiff could file his bill?

Section 4915 above referred to, reads as follows:

Whenever a patent or application is refused either by the Commissioner of Patents or by the Supreme Court of the District of Columbia, upon appeal from the Commissioner, the applicant may have remedy by a bill in equity.

The Supreme Court of the United States in *Gandy* v. *Marble* (122 U. S., 432) held that the time for bringing suits under section 4915, above referred to, was governed by section 4894, R. S. U. S., which reads as follows:

All applications for patents shall be completed and prepared for examination within one year after the filing of the application, and in default thereof, or upon failure of the applicant to prosecute the same within one year after any action therein, of which notice shall have been given to the applicant, they shall be regarded as abandoned by the parties thereto, unless it be shown to the satisfaction of the Commissioner of Patents that such delay was unavoidable.

The same conclusion was reached in the case of *Westinghouse Electric Company* v. *Ohio Brass Company*, (186 Fed. Rep., 518.)

The contention of the plaintiff that the motion for rehearing extended the time for appeal is answered by the decision of the court of appeals in *Ross* v. *Loewer*, (9 App. D. C., 563,) where it was held that a motion for rehearing does not suspend or extend the time for taking appeals from the Commissioner of Patents to that court.

In the course of its opinion the court said:

The procedures of the Patent Office are not controlled by the usual rules of practice, but are controlled by statutory provisions and a code of rules made in pursuance of the statutory provisions wholly unlike the rules of practice enforced in the courts.

No provisions are found either in the rules of the Patent Office, the court of appeals, or in any statute, whereby the right of filing a motion for rehearing is given. That being so, and an appeal from the decision of the Commissioner of Patents to the court of appeals being a part of the procedure fixed by statute for patent cases, it does not include motions or petitions for rehearing as in equity or in cases at law. The bill in equity, filed under section 4915, is not an appeal from the Commissioner of Patents, but is one of original equity jurisdiction. (*Apert* v. *Brownsville Plate Glass Co.*, 144 Fed. Rep., 115; *Butterworth* v. *Hoe*, 112 U. S., 50.)

Restating the facts: The case of *in re Mattullath Aeroplane Company* was an appeal from the decision of the Commissioner of Patents, granted by statute and governed by the rules fixed in accordance with the statute which failed to provide for a motion for rehearing. The present case, brought under section 4915, is by the terms of that section a bill in equity which may be filed whenever an application is refused either by the Commissioner of Patents or by the court of appeals. In this case the patent was finally refused on February 5, 1917, by the court of appeals, and this action not being

brought within one year from that time as required by section 4894, the motion to dismiss must be sustained.

Supreme Court of the District of Columbia.

MATTULLATH AEROPLANE COMPANY v. NEWTON, COMMISSIONER OF PATENTS.

Decided July 21, 1921.

1. PATENTS—REINSTATEMENT OF SUIT IN EQUITY UNDER SECTION 4915—PETITION FILED TOO LATE.

Where a suit in equity under Section 4915, Revised Statutes, was dismissed because brought more than a year after the date of the decision by the Court of Appeals of the District of Columbia, a petition to reopen the final decree dismissing such suit and reinstate the suit filed after the time when an appeal could have been taken and long after the end of the term of the court at which the final decree was entered, denied.

2. SAME—JUDICIAL NOTICE OF RECORDS OF PATENT OFFICE.

The Supreme Court of the District of Columbia may take judicial notice of the records of the U. S. Patent Office disclosing the date when the Commissioner of Patents, sued in his official capacity, ceased to be such official.

3. SAME—SUIT AGAINST U. S. OFFICIAL—ABATEMENT.

Where a suit in equity under section 4915, Revised Statutes, against the Commissioner of Patents was dismissed because brought more than a year after the date of the decision of the Court of Appeals of the District of Columbia, petition to reopen the final decree and reinstate the suit denied where it appeared that defendant had ceased to be an official of the Patent Office and his successor was not substituted within a year thereafter, as required by the act of Congress of February 9, 1899. (30 Stat. L., 822.)

Mr. W. H. Swenarton, *Mr. John W. Glennan*, and *Mr. R. Newton Donaldson* for Mattullath Aeroplane Company.

Mr. T. A. Hostetler for the Commissioner of Patents.

MEMORANDUM OPINION BY JUSTICE HOEHLING.

On February 23, 1918, plaintiff filed its bill of complaint against James T. Newton, then Commissioner of Patents of the United States; said bill being filed under section 4915 R. S. U. S. and the act of Congress of February 9, 1893; and in said bill decree was sought (*a*) adjudging Hugo Mattullath to have been the original, first and sole inventor of certain improvements in flying machines described in the bill; (*b*) adjudging that the Mattullath Aeroplane Co., plaintiff, was entitled to receive patent for said invention; and (*c*) that the said Commissioner of Patents be directed to grant and issue a patent to plaintiff company assignee, etc. On March 7, 1918, answer was filed by the defendant; but which answer was thereafter withdrawn and motion to dismiss the bill filed March 19, 1918, the ground of motion being that the suit was not brought within one year after the decision of the Court of Appeals of the District of Columbia refusing patent on the application involved in the suit.

On April 3, 1920, opinion of the court was filed sustaining the motion to dismiss and thereafter, April 27, 1920, final decree was entered in the cause dismissing the bill of complaint.

On May 27, 1921, petition was filed herein, wherein the following relief is sought:

Your petitioner therefore prays that the order hereinabove referred to be set aside, and that an order be entered permitting the prosecution of the suit on the bill heretofore filed, and ordering the defendant mentioned in said suit to answer the bill within the usual time allowed by law.

On July 14, 1921, there was filed in the cause copy of a notice addressed to the attorney for the defendant to the effect that the foregoing petition would be called to the attention of the court on Tuesday, July 19, 1921.

On said July 19, 1921, the petition was submitted by counsel for the plaintiff and defendant in the cause and typewritten memorandum briefs filed on behalf of each.

From the foregoing statement the fact appears that final decree in this cause was entered April 27, 1920; that no appeal was taken therefrom; that all times have now passed within which an appeal could be taken; and, furthermore, the term of court at which the final decree was entered has long since ended.

While the above sufficiently indicates that the final decree herein, and for the reasons above stated, is not now proper to be reopened, it may be remarked that the court is advised that the records of the U. S. Patent Office disclose, (and of which fact the court is entitled to take judicial notice,) that the defendant in the action, James T. Newton, herein sued in his official capacity as Commissioner of Patents, ceased to be such official on July 19, 1920; in which connection see act of Congress, of February 8, 1899, (30 Stat., 822,) and the case of *Le Crone* v. *McAdoo, Secretary of the Treasury*, (253 U. S., 217.)

The petition to reinstate is denied.

Adverse Decisions in Interference.

REISSUE PATENT NO. 14,787.

On June 28, 1921, a decision was rendered that Leigh J. Stephenson was not the first inventor of the subject-matter covered by claim 15 of his reissued Patent No. 14,787, subject, "Dynamo-electric machinery," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,231,123.

On June 30, 1921, a decision was rendered that Benjamin T. Brooks and Dillin F. Smith were not the first inventors of the subject-matter covered by claims 2, 3, 5, and 6 of their Patent No. 1,231,123, subject, "Production of chlorinated hydrocarbons," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,273,189.

On June 28, 1921, a decision was rendered that Fred Schoenwolf was not the first inventor of the subject-matter covered by claims 1, 5, 9, and 18 of his Patent No. 1,273,189, subject, "Telephone system with automatic ringing disconnect," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,287,649.

On June 29, 1921, a decision was rendered that Thomas Danquard was not the first inventor of the subject-matter covered by claims 1, 2, 3, 5, 6, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, and 18 of his Patent No. 1,287,649, subject, "Soft-tension graduating device for musical instruments," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,307,181.

On June 21, 1921, a decision was rendered that Lee A. Bixby was not the first inventor of the subject-matter covered by claim 6 of his Patent No. 1,307,181, subject, "Wheel and tire carriers," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,313,187.

On July 2, 1921, a decision was rendered that Albert W. Hull was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, 8, and 9 of his Patent No. 1,313,187, subject, "Method of and means for amplifying electric variations," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,318,941.

On June 15, 1921, a decision was rendered that Samuel B. Williams, Jr., was not the first inventor of the subject-matter covered by claims 1, 2, 4, 5, 6, 10, 11, 17, and 18 of his Patent No. 1,318,941, subject, "Telephone-exchange system," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,332,612.

On June 18, 1921, a decision was rendered that Hjalmar Olivier Dahl was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, and 5 of his Patent No. 1,332,612, subject, "Draft-tube for turbines," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(ORDER No. 2,682.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, July 27, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 20, Wooden Buildings, (Division XLVI,) establish the following subclass and definition:

Buildings—
1.01. Bank protective type.

1.01. BUILDINGS, BANK PROTECTIVE TYPE. Miscellaneous arrangements of rooms, doors, or windows and locking devices therefor not otherwise classified for preventing the robbing of a bank or customers.

Note.—These frequently involve locking devices for the entrance doors and windows or special chambers at the cashier's window for the entrance of persons receiving money to prevent the persons from leaving the chamber or bank against the will of the cashier or other official.

Note.—The following classes and subclasses include parts, subcombinations or special constructions adapted for analogous functions: 43, FISHING, TRAPPING, AND VERMIN-DESTROYING, subclass 59, Traps, Burglar; 70, LOCKS AND LATCHES; 177, ELECTRIC SIGNALING; 189, METALLIC BUILDING STRUCTURES, and 268, CLOSURE-OPERATORS, subclass 2, Counter-guard.

The patents contained in this subclass have been taken for the most part from class 43, Fishing, Trapping, and Vermin-Destroying, subclass 59, Traps, Burglar, and class 268, Closure-Operators, subclass 2, Counter-guard.

THOMAS E. ROBERTSON,
Commissioner.

Changes in Classification.

(ORDER No. 2,683.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, July 26, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 191, Electricity—Transmission to Vehicles, (Division XXXIV,) establish the following subclass and definition:

Conductors—
Trolley—
44.1. Splicers.

44.1. CONDUCTORS, TROLLEY, SPLICERS. Splicers or couplings for alined ends of electric trolley-wires.

Note.—See classes 173, ELECTRICITY—CONDUCTORS, subclass 263, Connectors, Wire splices, and the subclass indented thereunder, and 287, ROD JOINTS OR COUPLINGS, subclasses 78, Flexible rod or strand, Interlocked or lapped, Sleeved, and the subclass indented thereunder; 80, Flexible rod or strand, Offset or knotted end and sleeve; 107, Flanged rod and flanged coupling-nut, and 115, Sleeve, Binding detent.

The patents contained in this subclass have been taken for the most part from classes 173, Electricity—Conductors, subclass 263, Connectors, Wire-splices, 191, Electricity—Transmission to Vehicles, subclasses 33, Conductors, Trolley, and 44, Conductors, Trolley, Supports, Ears, Splices, and 287, Rod Joints or Couplings, subclasses 78, Flexible rod or strand, Interlocked or lapped, Sleeved, and the subclass indented thereunder, and 80, Flexible rod or strand, Offset or knotted end and sleeve.

THOMAS E. ROBERTSON,
Commissioner.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED DURING THE MONTH OF JULY, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

A/S Myrens Verksted. (See Elling, Jens W. E., assignor.)
A. S. Gilman Printing Co., The. (See Ingersoll, Leland, assignor.)
Aalborg, Christian, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Trolley. No. 1,384,418; July 12; v. 288; p. 290.
Abbott, Adrian O., Jr., Detroit, Mich., assignor to Morgan & Wright. Tire-loosening machine. No. 1,384,419; July 12; v. 288; p. 290.
Abernathy, Benjamin H., assignor of one-third to W. S. Lee and one-third to R. Maines, Tulsa, Okla. Safety roller-bearing swivel-wrench. No. 1,383,274; July 5; v. 288; p. 3.
Abraham, Herbert, New York, N. Y., assignor to The Ruberoid Co. Shoe-filler. No. 1,385,808; July 26; v. 288; p. 733.
Abraham, Herbert, New York, N. Y., assignor to The Standard Paint Company. Shingle. No. 1,385,809; July 26; v. 288; p. 733.
Abric, Emile P. A., Paris, France. Railway signaling. No. 1,385,295; July 19; v. 288; p. 552.
Ackerman, Emil. (See Truitt, J. E., and Ackerman.)
Adair, Samuel E., New York, N. Y., assignor to International Radio Telegraph Company. Amplifier. No. 1,383,275; July 5; v. 288; p. 3.
Adams, Arthur A., Brookline, and F. A. Emery, Ashmont, assignor, by mesne assignments, to Boston Scale and Machine Co., Boston, Mass. Weighing-machine. No. 1,385,739; July 26; v. 288; p. 719.
Adams, Edgar W. (See Gilbert, O. C., and Adams.)
Addressograph Company. (See Hubbard, Henry E., assignor.)
Adell, John A. (See Starrett, L. S., and Adell.)
Afanador, Angel, Lincoln, Nebr. Valve-gear for motors. No. 1,385,104; July 19; v. 288; p. 514.
Agler, Henri G. E., New York, N. Y. Block-printing machine for fabrics. No. 1,384,934; July 19; v. 288; p. 477.
Ahlbell Battery Container Corporation. (See Ahlgren, John M., assignor.)
Ahlgren, John M., Indianapolis, Ind., assignor to Ahlbell Battery Container Corporation, Chicago, Ill. Storage-battery container. No. 1,384,816; July 19; v. 288; p. 453.
Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Pump and pumping system. No. 1,385,061; July 19; v. 288; p. 504.
Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Pumping system. No. 1,385,062; July 19; v. 288; p. 505.
Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Pumping system. No. 1,385,063; July 19; v. 288; p. 505.
Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Pumping system. No. 1,385,064; July 19; v. 288; p. 505.
Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Pneumatic pump. No. 1,385,065; July 19; v. 288; p. 506.
Ainsberry, Michael C. (See Welthans, John J., assignor.)
Air Reduction Company. (See Metsger, Floyd J., assignor.)
Ajax Foundry Company. (See Edwards, Harry T., assignor.)
Ajax Manufacturing Company, The. (See Blakeslee, John R., assignor.)
Akeley, Carl E., New York, N. Y. Mirror and backing the same. No. 1,384,294; July 12; v. 288; p. 264.
Akeley, Carl E., New York, N. Y. Backing mirrors. No. 1,384,420; July 12; v. 288; p. 290.
Akemann, Walther, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Fire-direction apparatus for naval guns. No. 1,384,005; July 5; v. 288; p. 155.
Akerlund, Karl E., Chicago, Ill. Spring-motor. No. 1,385,351; July 26; v. 288; p. 639.
Aktiebolaget Karlstads Mekaniska Verkstads. (See Wagner, Rudolf E., assignor.)
Aktiebolaget Original-Odhner. (See Kuikka, Edward, assignor.)
Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie. (See Keller, Huldreich, assignor.)
Albright, Asa I., and F. L. Myatt, Monroe, La. Riveting-tool. No. 1,384,374; July 12; v. 288; p. 281.
Alexander, Herman L., Chicago, Ill. Cooking utensil. No. 1,384,035; July 12; v. 288; p. 211.
Alexander Potato Curing Company. (See Iles, E. J., and Hastings, assignors.) Reissue.
Alexander, Walter, New York, N. Y. Waterproofing. No. 1,385,864; July 26; v. 288; p. 742.
Alkire, Frederick W. (See Valentine, J. R., and Alkire.)
Allan, Thomas A. (See Tillett, C. H., and Allan.)
Allardyce, James A., Minneapolis, Minn. Aeroplane. No. 1,383,509; July 5; v. 288; p. 52.
Allen, Frank B., Ben Avon, and M. C. Sherman, Philadelphia, Pa., assignors to Baker-Dunbar-Allen Company, Cleveland, Ohio. Twin gate for hoppers. No. 1,381,175; July 12; v. 288; p. 239.
Allen, John W., South Omaha, Nebr. Preparing malted food products. No. 1,385,352; July 26; v. 288; p. 689.
Allen Typewriter Company. (See Uhlig, Richard W., assignor.)
Alley, Frank, West Hartford, assignor to The Arrow Electric Company, Hartford, Conn. Safety device for stamping-presses and the like. No. 1,384,654; July 12; v. 288; p. 340.
Allied Tractor Company, The. (See Nielsen, Lauritz F., assignor.)
Allis-Chalmers Manufacturing Company. (See Brown, Arthur J., assignor.)
Allis-Chalmers Manufacturing Company. (See McCoy, James P. A., assignor.)
Allis-Chalmers Manufacturing Company. (See Newhouse, Ray C., assignor.)
Allis-Chalmers Manufacturing Company. (See Sams, Fred V., assignor.)
Allis-Chalmers Manufacturing Company. (See Search, Charles E., assignor.)
Allis-Chalmers Manufacturing Company. (See Steen, Halfdan A., assignor.)
Allison, Isaiah, Downers Grove, and W. J. Leighty, Chicago, Ill. Oxyacetylene-blowpipe. No. 1,384,224; July 12; v. 288; p. 249.
Allmon, Joseph G., West Medford, Mass. Wrench. No. 1,384,655; July 12; v. 288; p. 340.
Alloy Parts Manufacturing Company, The. (See Naugle, Harry M., assignor.)
Almberg, Gustave, Chicago, Ill. Automatic weighing-machine. No. 1,383,279; July 5; v. 288; p. 4.
Almond, Henry, *et al.* (See Clark, John W., assignor.)
Alpern, Maxwell, assignor to American Engineering Company, Philadelphia, Pa. Stoker. No. 1,384,656; July 12; v. 288; p. 340.
Alschuler, Ernest, St. Louis, Mo., assignor, by mesne assignments, to National Carbon Company, Inc., Cleveland, Ohio. Hand-lamp switch. No. 1,384,548; July 12; v. 288; p. 317.
Aluminum Castings Company, The. (See Bezzenberger, F. K., and Rich, assignors.)
Aluminum Castings Company, The. (See Norton, Allen B., assignor.)
Aluminum Company of America. (See Black, James D., assignor.)
Alvey Manufacturing Company. (See Hinchman, George N., assignor.)
Alvord, Clinton, Worcester, Mass. Color-printing mechanism. No. 1,383,589; July 5; v. 288; p. 68.
Ambrose, William T., Memphis, Tenn. Self-watering flower-pot. No. 1,383,368; July 5; v. 288; p. 23.
American Agricultural Chemical Co., The. (See Curran, John J., assignor.)
American Automatic Lock & Lift Company. (See Bishop, Homer G., assignor.)
American Bosch Magneto Corporation. (See Krats, Frans, assignor.)
American Bosch Magneto Corporation. (See Naul, James M., assignor.)
American Brake Shoe & Foundry Company, The. (See Thompson, James S., assignor.)
American Brass Company, The. (See Robbins, William A., assignor.)
American Can Company. (See Nowack, Charles H., assignor.)
American Can Company. (See Odquist, Victor, assignor.)

American Car Company. (See Schechter, Bernard, assignor.)
American Cellulose & Chemical Manufacturing Company. (See Bradley, Charles S., assignor.)
American Dan Bottle Seal Corporation. (See Nordstrom, Elof, assignor.)
American Dressler Tunnel Kilns. (See Dressler, Philip, assignor.)
American Dressler Tunnel Kilns. (See Dressler, Philip d'H., assignor.)
American Engineering Company. (See Alpern, Maxwell, assignor.)
American Gasaccumulator Company. (See Dalén, Gustaf, assignor.)
American Laundry Machinery Company, The. (See Waream, C. E., and Link, assignors.)
American Manganese Steel Company. (See Johnson, Frank E., assignor.)
American Meter Company. (See Kerstein, Ernest A., assignor.)
American Optical Company. (See Schumacher, E. L., and Boutell, assignors.)
American Optical Company. (See Tillyer, E. D., and Kerr, assignors.)
American Optical Company (See Tillyer, Edgar D., assignor.)
American Radiator Company. (See Landon, Archer A., assignor.)
American Shale Refining Company, The. (See Wingett, John M., assignor.)
American Steel and Wire Company, The. (See Smith, William J., assignor.)
American Steel Foundries. (See Floyd, George G., assignor.)
American Steel Foundries. (See Robertson, Alexander, assignor.)
American Stove Company. (See Fuldauer, Frederick I., assignor.)
American Telephone and Telegraph Company. (See Clark, Alva B., assignor.)
American Telephone and Telegraph Company. (See Demarest, C. A., Clark, and Crisson, assignors.)
American Telephone and Telegraph Company. (See Parker, R. D., and Hamilton, assignors.)
American Telephone and Telegraph Company. (See Toomey, J. F., and Demarest, assignors.)
American Tool & Machine Company. (See Goddard, G. N., and Smith, assignors.)
American Whaley Engine Company. (See Whaley, William B. S., assignor.)
American Well Works, The. (See Chapman, Matthew T., assignor.)
Ameshury Seat Manufacturing Company. (See Lunt, F. L., and Hatch, assignors.)
Amonsen, George H. (See Amonsen, Gilbert and G. H.)
Amonsen, Gilbert and G. H., Minneapolis, Minn. Clutch. No. 1,384,225; July 12; v. 288; p. 249.
Amsler-Morton Company. (See Geer, Paul L., assignor.)
Anchor Cap & Closure Corporation. (See Durkee, Chauncey H., assignor.)
Anchor Cap & Closure Corporation. (See Luhrmann, George W., assignor.)
Anchor Cap & Closure Corporation. (See White, William P., assignor.)
And. H. Klaer & Co., Ltd., of Norway. (See Strehlenert, Robert W., assignor.)
Ander, August, and F. T. McGuire, Seattle, Wash. Manufacturing tailors' chalk. No. 1,384,375; July 12; v. 288; p. 281.
Anderson, Albert S., assignor to G. Waldref, St. Paul, Minn. Hydraulic ram. No. 1,384,421; July 12; v. 288; p. 291.
Anderson, Andrew, and C. Brown, Rock Springs, Wyo. Demountable-rim contractor. No. 1,385,353; July 26; v. 288; p. 639.
Anderson-Barngrover Mfg. Co. (See Thompson, Albert R., assignor.)
Anderson, Carl E., assignor to The Bryant Electric Company, Bridgeport, Conn. Electric switch. No. 1,385,296; July 19; v. 288; p. 552.
Anderson, Clarence A., Abilene, Kans. Electrical testing system and apparatus. No. 1,384,734; July 19; v. 288; p. 437.
Anderson, Gustaf, New York, N. Y. Device for launching aeroplanes from ships. No. 1,384,036; July 12; v. 288; p. 211.
Anderson, Henry R. W., *et al.*, executors. (See Thomas, H. S., Davies, and Thomas.)
Anderson, James A., Chickasha, Okla. Blowtorch. No. 1,383,276; July 5; v. 288; p. 3.
Anderson, James B., Shaler township, Allegheny county; J. B. Garner, Pittsburgh, and G. A. Shaner, Butler, Pa. Liquid-fuel burner. No. 1,384,985; July 19; v. 288; p. 489.
Anderson, John, St. Louis, Mo. Attaching device for shoe-heels. No. 1,383,277; July 5; v. 288; p. 3.
Anderson, Nils, Yutan, Nebr. Clutch-lock. No. 1,383,278; July 5; v. 288; p. 4.
Anderson, Nils, Yutan, Nebr. Top and fender for tractors. No. 1,384,735; July 19; v. 288; p. 437.
Anderson, William B., assignor to Haggard & Marcusson Co., Chicago, Ill. Spring-bed-bottom structure. No. 1,384,111; July 12; v. 288; p. 226.
Anderson, William B., Molson, Wash. Pressure-gage. No. 1,384,422; July 12; v. 288; p. 291.
Anderton, Herbert F. (See Bailey, Greenwood, assignor.)
Andregg, John E., Warren, Conn. Auto-signal. No. 1,384,112; July 12; v. 288; p. 226.
Angier, Edward H. (See Wheildon, William M., assignor.)
Angier, Edward H., Framingham, Mass. Package. No. 1,385,165; July 19; v. 288; p. 526.
Angle, Glenn D., Dayton, Ohio. Variable-throw crank-shaft. No. 1,385,768; July 26; v. 288; p. 725.
Angle, Lloyd A., assignor to Arts In Buttons, Inc., Rochester, N. Y. Button. No. 1,383,591; July 5; v. 288; p. 69.
Anglo-American Mill Company, The. (See Campbell, Thomas C., assignor.)
Angus, William, & Company (Scotland) Limited. (See Howe, Albert L., assignor.)
Angyal, Violet, Balham, London, England. Musical instrument operated by percussion. No. 1,385,898; July 26; v. 288; p. 750.
Anthes, Albert N., Fort Madison, Iowa. Shock-absorber. No. 1,383,592; July 5; v. 288; p. 69.
Anthon, John H., San Francisco, Calif. Shoe-lacing device. No. 1,385,238; July 19; v. 288; p. 540.
Anthony, George H., Sykesville, Pa. Tie and rail-fastener. No. 1,384,006; July 5; v. 288; p. 155.
Appel, Charles A., Jr., Washington, D. C. Check-protector. No. 1,384,584; July 12; v. 288; p. 324.
Arceneaux, Armond R. (See Davis, Monroe, assignor.)
Ardo, Joseph, and O. Phillips, Newhall, W. Va. Sunkenship indicating and safety device. No. 1,384,736; July 19; v. 288; p. 437.
Arey, Fred C., Oak Park, Ill. Expanded-metal-lath machine. No. 1,384,376; July 12; v. 288; p. 281.
Arlington Refrigerator Company. (See Rice, George H., assignor.)
Armagnat, Henri, and P. Frely, Paris, France. Electric reproducer for phonographs. No. 1,384,295; July 12; v. 288; p. 264.
Armstrong, Evan A. (See Harris, Archer H., assignor.)
Armstrong, Morgan K., Winnetka, assignor to Bestwall Manufacturing Company, Chicago, Ill. Plastic composition. No. 1,384,037; July 12; v. 288; p. 211.
Armstrong, Percy A. E., Loudonville, N. Y. Electrical heating element of alloy-steel. No. 1,385,740; July 26; v. 288; p. 719.
Armstrong, Robert B., assignor to himself and R. & W. Hawthorn Leslie & Company, Limited, Newcastle-upon-Tyne, England. Water-tube steam-boiler. No. 1,383,590; July 5; v. 288; p. 69.
Arnold, Albert, Detroit, Mich. Valve-governor. No. 1,384,113; July 12; v. 288; p. 226.
Arnold, Harold D., Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Detecting underwater vibrations. No. 1,383,690; July 5; v. 288; p. 90.

Dougan, Kennedy, Minneapolis, Minn. Steering mechanism for dirigible bodies. No. 1,384,745; July 19; v. 288; p. 439.
Doughtie, John E., *et al.* (See Howell, Henry M., assignor.)
Douglas, William, Kingswood, Bristol, England. Roller-bearing. No. 1,383,292; July 5; v. 288; p. 7.
Doutney, George, Brooklyn, N. Y. Lock for envelops and other containers. No. 1,384,604; July 12; v. 288; p. 329.
Dow, Andrew, Seattle, Wash. Stump-puller. No. 1,384,384; July 12; v. 288; p. 283.
Dowden, John E., Lake Preston, S. D. Loading-machine. No. 1,383,910; July 5; v. 288; p. 135.

Downs, Richard, *et al.* (See Howell, Henry M., assignor.)
Doxford, Robert P. (See Keller, Karl O., assignor.)
Doyle, William T., assignor to Sturtevant Mill Company, Boston, Mass. Apparatus for manufacturing acid phosphate or superphosphate. No. 1,383,911; July 5; v. 288; p. 135.
Doyle, William T., assignor to Sturtevant Mill Company, Boston, Mass. Manufacturing acid phosphate or superphosphate. No. 1,383,912; July 5; v. 288; p. 135.
Drabeck, John C. (See Welling, Matthew J., assignor.)
Dragon, Jens, assignor of one-half to W. A. Boro, Enaville, Idaho. Saw-handle. No. 1,385,671; July 26; v. 288; p. 705.
Drake, A. W., Manufacturing Company. (See Gomber, George W., assignor.) (Reissue.)
Drake, James C., Rochester, Minn., assignor to Sears, Roebuck and Company, Chicago, Ill. Sound-box mounting for talking-machines. No. 1,385,118; July 19; v. 288; p. 517.
Draper Corporation. (See Rhoades, Alonzo E., assignor.)
Draper Corporation. (See Stone, Melvin L., assignor.)
Draper Corporation. (See Tinkham, Eugene L., assignor.)
Dresbach, Mary, New Haven, Conn. Brassière. No. 1,385,672; July 26; v. 288; p. 705.
Dresner, Samuel, Chicago, Ill. Frame for traveling-bags. No. 1,384,433; July 12; v. 288; p. 293.
Dressler, Philip, Zanesville, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y. Tunnel-kiln. No. 1,384,434; July 12; v. 288; p. 293.
Dressler, Philip d'H., Zanesville, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y. Tunnel-kiln with sectional combustion-chambers. No. 1,384,435; July 12; v. 288; p. 294.
Drew, Harry A., West New York, N. J., assignor, by mesne assignments, to Coin Device and Signal Co. Inc., New York, N. Y. Coin collecting, registering, and change-delivering apparatus. No. 1,384,436; July 12; v. 288; p. 294.
Drewsen, Vigzo, Brooklyn, N. Y. Production of acetone by distillation of sodium acetate, &c. No. 1,385,866; July 26; v. 288; p. 744.
Dreyfoos, Alexander W., Mount Vernon, N. Y. Photographic drying-machine. No. 1,385,365; July 26; v. 288; p. 642.
Drozds, Wicenty, assignor of one-half to E. Borowski, Cleveland, Ohio. Floor scrubbing and mopping machine. No. 1,384,124; July 12; v. 288; p. 229.
Druar, Frank J., assignor to Packard Motor Car Company, Detroit, Mich. Motor-vehicle. No. 1,384,309; July 12; v. 288; p. 269.
Du Brie, Stanley R., assignor to E. H. Kramer, Detroit, Mich. Tractor. No. 1,385,249; July 19; v. 288; p. 542.
Ducker Sectional Building Corporation. (See Ducker, William M., assignor.)
Ducker, William M., assignor to Ducker Sectional Building Corporation, New York, N. Y. Retaining device for window-sash. No. 1,374,556; July 12; v. 288; p. 318.
Duda, Oswald, Houston, Tex., assignor to Reed Roller Bit Company. Wrench. No. 1,384,800; July 19; v. 288; p. 450.
Duer, Solon, St. Paris, Ohio. Hand warm or grip for steering-wheels. No. 1,385,527; July 26; v. 288; p. 675.
Dufaux, Charles F., Geneva, Switzerland. Magneto-electric generator for lighting vehicles. No. 1,385,119; July 19; v. 288; p. 517.
Duff, John H., Kansas City, Mo. Car-brake. No. 1,384,454; July 12; v. 288; p. 297.
Duffy, James U., assignor to The Friction Car Stop Company, Cleveland, Ohio. Car-stop shoe. No. 1,385,528; July 26; v. 288; p. 675.
Dungan, John E., Canton, Ohio, assignor of seven-sixteenths to W. S. Bryson, one-sixteenth to B. F. Bone, one-sixteenth to F. M. Howard, one-sixteenth to J. A. Schaub, one-sixteenth to A. C. Scroggins, Jr., one-sixteenth to H. J. Zink, and one-sixteenth to E. E. Koontz, Moundsville, W. Va. Machine for dispensing semisolid substances. No. 1,384,310; July 12; v. 288; p. 267.
Dunham, John C., Greenville, Ohio. Safety-razor. No. 1,384,691; July 12; v. 288; p. 348.
Dunham, Milbourne K., assignor of one-third to C. Berg, and two-thirds to W. Klingberg, New York, N. Y. Heater. No. 1,384,746; July 19; v. 288; p. 439.
Dunkelberger, Milton S., Dayton, Ohio. Collapsible slip-on. No. 1,385,043; July 19; v. 288; p. 500.
Dunlop, David, and J. D. Davis, Petersburg, Va. Auxiliary air-intake for internal-combustion engines. (Reissue.) No. 15,163; July 26; v. 288; p. 766.
Dunn Manufacturing Company, (See Dunn, William L., assignor.)
Dunn, William L., assignor to Dunn Manufacturing Company, Oxnard, Calif. Well-elevator. No. 1,385,485; July 26; v. 288; p. 656.
Dunwoody, Henry H. C., Washington, D. C. Cycloid propeller. No. 1,385,908; July 26; v. 288; p. 752.
Duplessie, Joseph, assignor of one-half to George F. Rooke, Providence, R. I. Grinding-fixture. No. 1,384,726; July 12; v. 288; p. 354.
Du Pont, E. I., de Nemours & Company. (See Lednum, Edmund T., assignor.)
Du Pont, Francis I., assignor to Delaware Chemical Engineering Company, Wilmington, Del. Burner for steam-automobiles. No. 1,385,366; July 26; v. 288; p. 642.
Dupont, George C., South Croydon, assignor to Philip and Tracey, Limited, Fulham, London, England. Fastener, support, and the like. No. 1,385,311; July 19; v. 288; p. 554.
Dupont, Martin S., Chicago, Ill. Fan. No. 1,384,053; July 12; v. 288; p. 214.
Dupré, Wilfred, Worcester, assignor of one-half to F. A. Moore, Foxboro, Mass. Automatic tracking device No. 1,383,390; July 5; v. 288; p. 28.
Durant, Charles. (See Wells, Fred B., assignor.)
Durkee, Chauncey H., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y. Automatic control for processing apparatus. No. 1,385,609; July 26; v. 288; p. 692.
Durnell, Cecil M., Daytona Beach, assignor to J. F. Phillips, Wilson, Fla. Shade and curtain bracket. No. 1,384,248; July 12; v. 288; p. 254.
Dutcher, Frank, Versailles, assignor to Central Railway Signal Company, Pittsburgh, Pa. Railway signal-torpedo. No. 1,385,312; July 19; v. 288; p. 555.
Dutcher, Frank, Versailles, assignor to Central Railway Signal Company, Pittsburgh, Pa. Railway signal-torpedo, No. 1,385,313; July 19; v. 288; p. 555.
Dutcher, Frank, Versailles, assignor to Central Railway Signal Company, Pittsburgh, Pa. Railway signal-torpedo. No. 1,385,314; July 19; v. 288; p. 555.
Dutcher, Frank, Versailles, assignor to Central Railway Signal Company, Pittsburgh, Pa. Railway signal-torpedo. No. 1,385,315; July 19; v. 288; p. 555.
Dutcher, Frank, Versailles, assignor to Central Railway Signal Company, Pittsburgh, Pa. Railway signal-torpedo. No. 1,385,316; July 19; v. 288; p. 555.
Dutcher, Pierpont E., Upper Montclair, N. J. Excavating apparatus. No. 1,383,913; July 5; v. 288; p. 135.
Dye, Glen M., assignor to Photographic Appliances Corporation, Minneapolis, Minn. Conveyer-apron. No. 1,384,125; July 12; v. 288; p. 229.
Dyer, Frank L. (See Tunison, Harold L., assignor.)
Dyer, Gon Z., Williamson, W. Va. Convertible vehicle-body. No. 1,385,317; July 19; v. 288; p. 555.
Dymond, Bartholdia, Charlottesville, Va. Bearing-fitting tool. No. 1,383,454; July 5; v. 288; p. 41.
Eagle Engineering Company. (See Sykes, George, assignor.)
Eakin, John P., Jollytown, Pa. Adjustable seat. No. 1,385,742; July 26; v. 288; p. 719.
Earl, Geo. G., *et al.* (See Brown, Charles A., assignor.)
Easterbrooks, Walter E. (See Coombs, Edgar I., assignor.)
Eastman, Carrie J., *et al.* (See Eastman, H. N., assignor.)
Eastman, Harry N., assignor of one-third to T. F. McDonald, one-third to A. A. McDonald, Dayton, and one-third to C. J. Eastman, Portsmouth, Ohio. Gas-mixer for internal-combustion engines. No. 1,384,184; July 12; v. 288; p. 241.
Eastman Kodak Company. (See Folmer, William F., assignor.)
Eastman Kodak Company. (See Hurlburt, David M., assignor.)
Eastman Kodak Company. (See Lubashez, Nahum E., assignor.)
Eastman Kodak Company. (See Punnett, M. B., and Whitaker, assignors.)
Eastman, Lyman H. (See Bartlett, C. A., and Eastman.)
Ebert, Alfred O. H. (See Pruszynski, A. J., and Ebert.)
Eckberg, Gustaf E. (See Lundell, V. S., and Eckberg.)
Eckel, Henry K., Milwaukee, Wis. Composition body for shoe-soles and the like. No. 1,383,793; July 5; v. 288; p. 111.
Eckelmann, Luis E., and G. E. Ferguson, New York, N. Y., assignors to Pyrene Manufacturing Company. Chemical heater. No. 1,384,747; July 19; v. 288; p. 439.
Eckerle, Charles E., Birmingham, Ala. Vaporizer for oil-burners. No. 1,384,522; July 12; v. 288; p. 311.
Edel, Max, Nuremberg, assignor to the Firm of Maschinenfabrik Worzeldorf H. A. Paulus & Franck, Worzeldorf-Nuremberg, Germany. Rake with exchangeable prongs. No. 1,385,965; July 26; v. 288; p. 763.
Edelmann, Otto, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Bracket for suspending cables and the like. No. 1,384,437; July 12; v. 288; p. 294.
Edwards, Harry T., assignor of one-half to Ajax Foundry Company, San Francisco, Calif. Casting-core. No. 1,384,438; July 12; v. 288; p. 294.
Edwards, O. M., Company, The. (See Chaffee, Edward F., assignor.)
Egerton, Henry C., Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Acoustic device. No. 1,383,700; July 5; v. 288; p. 92.
Egloff, Hermann, Los Angeles, Calif. Valve-lifting device. No. 1,385,436; July 26; v. 288; p. 656.
Ehrlich, Charles, deceased; M. Ehrlich, administrator, Brooklyn, N. Y. Wire fabric. No. 1,384,748; July 19; v. 288; p. 439.
Ehrlich, Max, administrator. (See Ehrlich, Charles.)
Ehrlich, William, Chicago, Ill. Apple paring, coring, and slicing machine. No. 1,384,013; July 5; v. 288; p. 157.
Ehrmann, George B., Troy, N. Y. Ironing neckbands. No. 1,384,605; July 12; v. 288; p. 329.
Eichengreen Sales Corporation, *et al.* (See Case, William A., assignor.)
Einsele, George N., Cedar Lake, Ind. String-truing machine. No. 1,385,367; July 26; v. 288; p. 642.

Ekman, Gunner A., Winchester, Mass. Multiple-gun-firing apparatus or bomb. No. 1,385,120; July 19; v. 288; p. 517.

Electric Boat Company. (See Grieshaber, Hugo E., assignor.)

Electric Controller & Manufacturing Company, The. (See Stratton, Harry F., assignor.)

Electric Gun Corporation. (See MacLaren, Frederick B., assignor.)

Electric Service Supplies Company. (See Mayer, Walter S., assignor.)

Electric Storage Battery Company. (See Palmer, William H., Jr., assignor.)

Electrothermal Company. (See Homan, John G., assignor.)

Elisberg, Benjamin, New York, and W. Sheff, Brooklyn, N. Y. False-teeth attachment. No. 1,384,717; July 12; v. 288; p. 353.

Eller, Otto H., New York, N. Y. Flying toy. No. 1,385,073; July 19; v. 288; p. 507.

Ellerman, Edward, assignor of fifty-one one-hundredths to J. E. Mitchell, Littleton, Colo. Automobile-trailer. No. 1,385,437; July 26; v. 288; p. 656.

Ellert, Charles O., Brooklyn, N. Y. Safety-pin. No. 1,385,743; July 26; v. 288; p. 719.

Ellicott, Valcoulon L., Baltimore, Md. Method of and apparatus for determining photographic exposures. No. 1,385,940; July 26; v. 288; p. 758.

Elling, Jens W. E., assignor to A/S Myrens Verksted, Christiania, Norway. Wet centrifugal compressor. No. 1,385,318; July 19; v. 288; p. 556.

Elliott, Harold F., Palo Alto, assignor to A. Taylor, San Francisco, Calif. Arc-radio-oscillation generator. No. 1,385,121; July 19; v. 288; p. 518.

Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Co. Oil-proofed container and making same. No. 1,385,941; July 26; v. 288; p. 758.

Ellis, George D., & Sons. (See Ellis, John D., assignor.)

Ellis, John D., assignor, by mesne assignments, to G. D. Ellis & Sons, Incorporated, Philadelphia, Pa. Can-fastening. No. 1,383,701; July 5; v. 288; p. 92.

Ellis-Foster Co. (See Ellis, Carleton, assignor.)

Ellis, William M., Kenton, Ohio. Spark-plug. No. 1,385,529; July 26; v. 288; p. 676.

Ellsworth, William, and R. E. MacKellar, Ashland, Ohio. Light-deflector. No. 1,383,702; July 5; v. 288; p. 92.

Elmen, Gustaf W., Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Insulating metal particles. No. 1,383,703; July 5; v. 288; p. 92.

Elvers, Hans C., assignor to Gisholt Machine Company, Madison, Wis. Adjusting and locking device for chuck-jaws. No. 1,384,557; July 12; v. 288; p. 310.

Elvy, Frank J., Catford, London, England. Boat and the like. No. 1,383,392; July 5; v. 288; p. 28.

Elyria Iron and Steel Company, The. (See Ferrier, Walter, assignor.)

Eisl, Peter F., Denver, Colo. Marking-tag. No. 1,385,530; July 26; v. 288; p. 676.

Emerson-Brantingham Company. (See Waterman, Lewis E., assignor.)

Emery, Frank A. (See Adams, A. A., and Emery.)

Emmenegger, Frank, St. Louis, Mo. Combination automobile-tire tool. No. 1,384,385; July 12; v. 288; p. 283.

Emmerling, Rudolph C., West Hoboken, N. J. Pantograph. No. 1,383,914; July 5; v. 288; p. 135.

Empire Cream Separator Company. (See McCormack, Herbert, assignor.)

Emtage, Nathaniel C., assignor to C. J. Everett, New Orleans, La. Addition compound for coffee. No. 1,384,692; July 12; v. 288; p. 348.

Enameled Steel Sign Company. (See Bacon, William M., assignor.)

Engel, Charles R., Yoman, Wash. Riveting machinery. No. 1,383,915; July 5; v. 288; p. 136.

Engel, Godfrey, Sr., Brooklyn, N. Y. Cap construction for sugar-mills. No. 1,383,539; July 5; v. 288; p. 58.

Engineering Corporation, N. C. L. (See Noble, Warren.)

England, Frank W. (See Olson, C. G., and England.)

Engle, Isaiah G. (See Stayman, David F., assignor.)

Enke, Martin F., Oakland, Calif. Ladder. No. 1,385,310; July 19; v. 288; p. 556.

Enterprise Manufacturing Company, The. (See Pflueger, Charles T., assignor.)

Enterprise Railway Equipment Company. (See Campbell, Argyle, assignor.)

Eoff, John R., Jr. (See Smith, B. H., and Eoff.)

Erickson, James. (See St. John, Miles C., assignor.)

Erickson, Edward. Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Compressing-machine. No. 1,384,185; July 12; v. 288; p. 241.

Erickson, Henry. (See Bartlett, C. A., and Eastman, assignors.)

Ericson, Lawrence, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Ignition-distributer. No. 1,385,368; July 26; v. 288; p. 642.

Ericson, Peter, Tacoma, Wash. Rotary engine. No. 1,383,916; July 5; v. 288; p. 136.

Errington, Franklin A., Stapleton, N. Y. Multiple tapping device and similar tool. No. 1,385,438; July 26; v. 288; p. 657.

Ervin, Preston, Emporia, Kans. Berry cleaner and stemmer. No. 1,384,455; July 12; v. 288; p. 297.

Eschholz, Otto H., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Electrode-holder for arc-welding. No. 1,384,439; July 12; v. 288; p. 295.

Essex Rubber Company. (See Sanders, Walter E., assignor.)

Etchells, John W., Brooklyn, N. Y. Hat-rack and coat-holder. No. 1,383,611; July 5; v. 288; p. 73.

Eury, Zebulon J., Fort Worth, Tex. Repairing scored cylinders. No. 1,384,456; July 12; v. 288; p. 298.

Eva, Addison H., San Antonio, Tex. Holder and tie. No. 1,383,917; July 5; v. 288; p. 136.

Evancho, Peter, Oneida, Pa. Pneumatic-tire protector. No. 1,383,612; July 5; v. 288; p. 78.

Evans, Howard C., Lynchburg, Va. Poultry device. No. 1,384,064; July 12; v. 288; p. 214.

Evans, Lewis J., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Co. Gear-cutting machine. No. 1,384,558; July 12; v. 288; p. 319.

Evans, Garfield I. (See Fraser, John G., assignor.)

Evans, Robert L., Roanoke, Va. Double-pressure ventvalve for angle-cocks. No. 1,385,122; July 19 v. 288; p. 518.

Everett, Cornelius J. (See Emtage, Nathaniel C., assignor.)

Everken, Hermann, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Acid-resisting receptacle. No. 1,384,023; July 5; v. 288; p. 159.

Evers, Cyrus, Brooklyn, assignor to Lidgerwood Manufacturing Company, New York, N. Y. Winding or hoisting engine. No. 1,383,704; July 5; v. 288; p. 92.

Ewing, Earl J. (See Quarmby, J. I., and Ewing.)

Ewing, Samuel R. (See Quarmby, J. I., and Ewing.)

Excelsior Steel Furnace Company, The. (See Menk, Rudolph W., assignor.)

Eynon, Harold G., Philadelphia, Pa. Electrically-operated centrifugal casting-machine. No. 1,385,781; July 26; v. 288; p. 727.

Fadness, Adolph R., Velva, N. D. Adjustable sieve-holder for threshing-machines. No. 1,383,918; July 5; v. 288; p. 136.

Fahey, William, Cleveland, Ohio. Lubricating apparatus. No. 1,385,531; July 26; v. 288; p. 676.

Faillace, Frank, New York, N. Y. Convertible vehicle-body. No. 1,386,909; July 26; v. 288; p. 752.

Fairbanks, E. and T., and Company. (See Starr, Morton H., assignor.)

Fairhead, James, assignor to The Lake Simcoe Ice Supply & Cold Storage Co. Limited, Toronto, Ontario, Canada. Ice-scoring machine. No. 1,384,749; July 19; v. 288; p. 439.

Farb, Pincus, Saginaw, Mich., assignor to Sonora Phonograph Corporation. Chuck for talking-machine needles and the like. No. 1,383,613; July 5; v. 288; p. 74.

Farmer, Clyde C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Pump-lubricator. No. 1,384,889; July 19; v. 288; p. 468.

Farnsworth, William W., Littleton, Colo. Cleaning apparatus. No. 1,383,455; July 5; v. 288; p. 41.

Farnsworth, William W., Littleton, Colo. Cleaning apparatus. No. 1,383,456; July 5; v. 288; p. 41.

Farnum, William C., Winchendon, Mass. Transmission mechanism for motors. No. 1,383,705; July 5; v. 288; p. 93.

Farnum, William C., Winchendon, Mass. Gear-reduction mechanism. No. 1,383,706; July 5; v. 288; p. 93.

Farnum, William C., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass. Making gear-cutters. No. 1,383,707; July 5; v. 288; p. 93.

Farr, Frederick G., assignor to Hydraulic Oil Systems Corporation, Detroit, Mich. Liquid-dispensing apparatus. No. 1,383,708; July 5; v. 288; p. 94.

Farrand, Clair L., Elizabeth, N. J., assignor, by mesne assignments, to Radio Corporation of America. Radio-transmitter. No. 1,385,818; July 26; v. 288; p. 735.

Farrell, William J., New York, N. Y. Radiator. No. 1,384,606; July 12; v. 288; p. 329.

Farrow, Irving J., assignor of one-half to A. J. Koehler, New York, N. Y. Ticket-dispensing apparatus. No. 1,383,393; July 5; v. 288; p. 28.

Faulhaber, Frank J., New York, N. Y. Tractor and trailer assemblage. No. 1,383,709; July 5; v. 288; p. 94.

Faulkner, Lawson F., Alexa Lake, British Columbia, Canada. Saw-guide. No. 1,385,673; July 26; v. 288; p. 705.

Faultless Caster Company. (See Smithfield, Emil H., assignor.)

Faust, Casper, Oshkosh, Wis., assignor of one-eighth to H. Nolte, St. Paul, Minn., one-eighth to J. B. Pushee, Milwaukee, one-eighth to F. J. Stopper, Oshkosh, Wis., one-eighth to W. H. Faust, and one-eighth to F. J. Faust, Oshkosh, Wis. Toy wagon. No. 1,383,457; July 5; v. 288; p. 42.

Faust, Clyde A. (See Faust, Jacob N. and C. A.)

Faust, Francis J., *et al.* (See Faust, Casper, assignor.)

Faust, Jacob N. and C. A., Chicago, Ill. Supporting-garment. No. 1,384,440; July 12; v. 288; p. 295.

Faust, Walter H., *et al.* (See Faust, Casper, assignor.)

Feder, William, assignor to Theo. B. Robertson Products Co., Chicago, Ill. Brush. No. 1,385,532; July 26; v. 288; p. 676.

Federal Adding Machine Corporation. (See Spiro, Charles, assignor.)

Federal Products Company. (See Coates, Frederick, assignor.)

Fedoroff, Vladimir P., New York, N. Y. Alarm-signal. (Reissue.) No. 15,150; July 12; v. 288; p. 356.

Feinstone, Samuel, Brooklyn, assignor of one-half to Freydberg Brothers Inc., New York, N. Y. Garment-belt structure. No. 1,385,533; July 26; v. 288; p. 676.

Feitel, Daniel W., New Orleans, La. Safety-guard for sewing-machines. No. 1,384,607; July 12; v. 288; p. 330.

Feudner, Willard J. (See Beach, H. L., and Feudner.)

Ferguson Forge Engineering Co. (See Ferguson, Thomas B., assignor.)

Ferguson, George E. (See Eckelmann, L. E., and Ferguson.)

Ferguson, George E., New York, N. Y., assignor to Pyrene Manufacturing Company. Chemical heater. No. 1,385,074; July 19; v. 288; p. 507.

Ferguson, George E., New York, N. Y., assignor to Pyrene Manufacturing Company. Preventing crystallization of a melted mass of crystals. No. 1,385,075; July 19; v. 288; p. 507.

Ferguson, Lorne E., Parkland, Alberta, Canada. Pipe-holder. No. 1,384,055; July 12; v. 288; p. 215.

Ferguson, Thomas B., Newark, N. J., assignor to Ferguson Forge Engineering Co. Oil-burner. No. 1,384,943; July 19; v. 288; p. 479.

Ferrari, Lorenzo, Oakland, Calif. Educational apparatus. No. 1,384,801; July 19; v. 288; p. 450.

Ferrier, Walter, Elyria, assignor to The Elyria Iron and Steel Company, Cleveland, Ohio. Control device for automatic machines. No. 1,385,369; July 26; v. 288; p. 642.

Fessenden, Reginald A., Brookline, Mass., assignor to Submarine Signal Company, Portland, Me. Method and apparatus for signaling and otherwise utilizing radiant impulses. No. 1,384,014; July 5; v. 288; p. 157.

Fessenden, Reginald A., Brookline, Mass., assignor to Submarine Signal Company, Portland, Me. Sound signaling. No. 1,384,029; July 5; v. 288; p. 160.

Fessenden, Reginald A., Newton, Mass., assignor to Submarine Signal Company, Portland, Me. Destroying enemy gun positions. No. 1,384,030; July 5; v. 288; p. 160.

Fetters, Charles A., Washington, D. C. Baggage-tag. No. 1,384,457; July 12; v. 288; p. 298.

Fibre Can Corporation. (See Ford, Ben K., assignor.)

Ficklen, William E., Norfolk, Va. Making pavements. No. 1,383,459; July 5; v. 288; p. 42.

Field, Allan J., New York, N. Y. Dyestuff and making the same. No. 1,383,710; July 5; v. 288; p. 94.

Field, Allan J., New York, N. Y. Monoazo dyestuff. No. 1,383,711; July 5; v. 288; p. 95.

Field, Millard F., Winthrop, Mass., assignor to Barber-Colman Company, Rockford, Ill. Machine for operating upon warps. No. 1,383,712; July 5; v. 288; p. 95.

Fields, John J., 3d. (See Hoornbeek, Lodewyck, assignor.)

Finch, Stanley W., Washington, D. C. Lubricating system. No. 1,383,919; July 5; v. 288; p. 137.

Fink, Colin G., Yonkers, assignor to Chile Exploration Company, New York, N. Y. Alloy. No. 1,384,056; July 12; v. 288; p. 215.

Firestone Tire and Rubber Company, The. (See Bush, A. A., and Freitag, assignors.)

Firestone Tire and Rubber Company, The. (See Jones, Robert R., assignor.)

Firestone Tire and Rubber Company, The. (See Maranville, Harvey F., assignor.)

Firm Motorwagenfabrik Berna A-G. (See Rutishauser, Arnold, assignor.)

Firm Scintilla. (See Bohli, Jacques, assignor.)

Fisher, Ada, London, England. Box for containing face-powder or the like. No. 1,383,394; July 5; v. 288; p. 28.

Fisher, Alfred, Chicago, Ill. Oil-burner system for furnaces. No. 1,385,534; July 26; v. 288; p. 677.

Fisher, Henry W. (See Fries, C., and Fisher.)

Fisher, Stanley L., Chester, assignor to The Pratt Read Player Action Company, Deep River, Conn. Player-piano. No. 1,384,993; July 19; v. 288; p. 490.

Fisk Rubber Company, The. (See Marquette, Melvon A., assignor.)

Flam, John, U. S. Army, assignor to Secretary of War of the United States of America. Percussion-fuse. No. 1,385,610; July 26; v. 288; p. 693.

Flannery Bolt Company. (See Dodds, Ethan I., assignor.)

Flannigan, Andrew W., Milwaukee, Wis. Sifter. No. 1,384,441; July 12; v. 288; p. 295.

Fleet, James, Montreal, Quebec, Canada. Puzzle. No. 1,384,057; July 12; v. 288; p. 215.

Fletcher, Willoughby R., Brinkman, Okla. Baling-press. No. 1,385,439; July 26; v. 288; p. 657.

Flintkote Company, The. (See Kiracofe, Otterbein, assignor.)

Flood Manufacturing Company. (See Lang, Albert R., assignor.)

Flood, John R., Everett, Wash. Automatic swivel-trailer coupling. No. 1,384,944; July 19; v. 288; p. 479.

Florendine, James. (See Barnett, W., and Florendine.)

Florkey, Clayton M., Kokomo, Ind. Vest-supporter. No. 1,384,693; July 12; v. 288; p. 348.

Flournoy, Robert, Seven Oaks, Tex. Link gear. No. 1,375,123; July 19; v. 288; p. 518.

Floyd, George G., assignor to American Steel Foundries, Chicago, Ill. Connection between side frames and tie-bars. No. 1,384,440; July 26; v. 288; p. 657.

Follinger, Herbert C., Chicago, Ill., assignor to Chain Belt Company, Milwaukee, Wis. Cooling-tank. No. 1,384,311; July 12; v. 288; p. 267.

Folmer, William F., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic exposing apparatus. No. 1,383,395; July 5; v. 288; p. 29.

Ford, Ben K., Oak Park, assignor to Fibre Can Corporation, Chicago, Ill. Machine for reducing the ends of container-bodies. No. 1,384,945; July 19; v. 288; p. 479.

Ford, Harry R. (See Burganer, Aaron A., assignor.)

Ford, William H. D., assignor to Western Electric Company, Incorporated, New York, N. Y. Spring-tension gage. No. 1,383,718; July 5; v. 288; p. 95.

Forman, John R. (See Willett, Hasen F., assignor.)

Fortescue, Charles L., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Circuit-interrupter. No. 1,384,442; July 12; v. 288; p. 295.

Foster Brothers Manufacturing Company. (See Foster, William B., assignor.)

Foster, Ephraim A., Sandusky, Ohio. Wheeled ladder. No. 1,384,694; July 12; v. 288; p. 248.

Foster, John P., Pala, Hawaii. Composite motor-fuel. No. 1,384,946; July 19; v. 288; p. 480.

Foster, Merriam and Company. (See Rowntree, Frank L., assignor.)

Foster, William B., assignor to Foster Brothers Manufacturing Company, Utica, N. Y. Corner-fastening for bedsteads. No. 1,384,126; July 12; v. 288; p. 229.

Foster, Wolcott C., Rutherford, N. J. Base-exchanging. No. 1,385,124; July 19; v. 288; p. 518.

Fowler, Carl H. (See Higley, Herman W., assignor.)

Fowler, David M., assignor of one-half to R. H. Caton, Terre Haute, Ind. Adjustable trolley-wheel fork. No. 1,384,458; July 12; v. 288; p. 298.

Fowler, Frank, Philadelphia, Pa. Toy. No. 1,383,798; July 5; v. 288; p. 112.

Fowler, Jonathan O., New York, N. Y. Safety tread. (Reissue.) No. 15,187; July 5; v. 288; p. 161.

Fox, Daniel S., Deep River, Conn. Expansion-drill. No. 1,385,370; July 26; v. 288; p. 643.

Fox, Godfrey H., Seattle, Wash. Graduated calipers. No. 1,385,910; July 26; v. 288; p. 753.

Fox, Otto, Lakewood, assignor to The Bryant Heater and Manufacturing Company, Cleveland, Ohio. Fuel control for boilers. No. 1,384,247; July 12; v. 288; p. 254.

Frank, Louis, Miami, Ariz. Direction-indicator. No. 1,384,248; July 12; v. 288; p. 254.

Frank, Louis, Miami, Ariz. Direction-indicator. No. 1,384,249; July 12; v. 288; p. 255.

Franklin, Clarence E., assignor of one-third to J. W. McDonel and one-third to E. K. Cunningham, Fostoria, Ohio. Railway-torpedo. No. 1,383,614; July 5; v. 288; p. 74.

Fraser, George H., Brooklyn, N. Y. Feeder or regulator for screening apparatus. No. 1,384,312; July 12; v. 288; p. 268.

Fraser, George H., Brooklyn, N. Y. Feed-regulator for screening and other apparatus. No. 1,384,313; July 12; v. 288; p. 268.

Fraser, George H., Brooklyn, N. Y. Method and apparatus for treating pulverized material. No. 1,385,674; July 26; v. 288; p. 706.

Fraser, George H., Brooklyn, N. Y. Apparatus for treating pulverized material. No. 1,385,675; July 26; v. 288; p. 706.

Fraser, John G., assignor of one-half to G. I. Evans, Hamilton, Ontario, Canada. Door-fastener. No. 1,385,125; July 19; v. 288; p. 518.

Frazier, Truman D., Martins Ferry, Ohio. Pneumatic tire. No. 1,383,458; July 5; v. 288; p. 42.

Fraser, William A., Brookline, Mass. Collapsible shield. No. 1,385,371; July 26; v. 288; p. 643.

Frazier, William L., Boise, Idaho. Diabetes remedy. No. 1,384,444; July 12; v. 288; p. 295.

Frazier, William L., Boise, Idaho. Diabetes remedy. No. 1,384,445; July 12; v. 288; p. 295.

Freborg, Charles, Kankakee, assignor to Price & Teeple Piano Company, Chicago, Ill. Automatic expression-controlling device. No. 1,383,920; July 5; v. 288; p. 137.

Freborg, Charles, Kankakee, assignor to Price & Teeple Piano Company, Chicago, Ill. Motor-mounting for player-pianos. No. 1,385,819; July 26; v. 288; p. 735.

Fredel, Michael M., Brooklyn, and W. Bosanko, Richmond Hill, N. Y. Agitator. No. 1,383,921; July 5; v. 288; p. 137.

Fredriksen, Edward, Christiania, Norway. Electric fluid-heating apparatus. No. 1,385,441; July 26; v. 288; p. 657.

Freedline, David, Brooklyn, N. Y. Hat-conformator. No. 1,383,922; July 5; v. 288; p. 137.

Hardey, Manuel, San Francisco, Calif. Screwdriver. No. 1,385,815; July 26; v. 288; p. 754.

Hardy, Harold J., Cleveland, Ohio. Machine for bending rods, bars, or the like. No. 1,385,542; July 26; v. 288; p. 678.

Hardy, John R., Portland, Oreg. Convertible table. No. 1,385,046; July 19; v. 288; p. 500.

Hargrove, Orlando P., Wayland, N. Y. Bumper for looms and the like. No. 1,383,940; July 5; v. 288; p. 141.

Harley, Leon J., Jr. (See Lasarea, George C., assignor.)

Harman, Jacob A., Peoria, Ill. Derrick or excavating-machine. No. 1,385,543; July 26; v. 288; p. 679.

Harman, Robert, York, assignor to T. Cooke & Sons, Limited, Bishopshill, York, England. Work-holder for grinding and the like machines. No. 1,383,941; July 5; v. 288; p. 141.

Harmon, George H., Inc., *et al.* (See Barrows, Robert Y., assignor.)

Harper, Edward W., assignor of one-third to C. H. Kelly, Savannah, Ga. Automatic valve. No. 1,384,950; July 19; v. 288; p. 481.

Harrah, Hillis A., Pomona, assignor of one-half to L. T. Leimbach, Rosedale, Kans. Tractor. No. 1,384,951; July 19; v. 288; p. 481.

Harrah, Hillis A., Kansas City, Mo., assignor of one-half to L. T. Leimbach, Rosedale, Kans. Tractor. No. 1,384,952; July 19; v. 288; p. 481.

Harrell, Annie L., Seattle, Wash. Motor. No. 1,384,256; July 12; v. 288; p. 356.

Harris, Archer H., Barberton, assignor of one-half to E. A. Armstrong, Akron, Ohio. Tire-supporting device for tire-molds. No. 1,384,463; July 12; v. 288; p. 299.

Harris Automatic Press Company, The. (See Pritchard, Carl G., assignor.)

Harris, James W., Turberville, S. C. Harrow. No. 1,383,942; July 5; v. 288; p. 142.

Harris, William, Cambridge, Ohio. Rolling-pin. No. 1,385,916; July 26; v. 288; p. 754.

Harris, William K., assignor to Salem Manufacturing Company, Salem, N. J. Linoleum or like printing machine. No. 1,384,024; July 5; v. 288; p. 159.

Harris, William L., New York, N. Y. Metallic packing. No. 1,383,948; July 5; v. 288; p. 142.

Harris, William T., Harrodsburg, Ky. Brake. No. 1,385,544; July 26; v. 288; p. 679.

Harrison, William E., Union City, Ind. Placard-sustaining means. No. 1,384,757; July 19; v. 288; p. 441.

Hart & Hegeman Manufacturing Company, The. (See Stirling, Clarence C., assignor.)

Hart, Lewis B., Plaquemine, La. Surgical appliance. No. 1,383,944; July 5; v. 288; p. 142.

Hartel, Henry W., Philadelphia, Pa. Cut-out for internal-combustion engines. No. 1,383,400; July 5; v. 288; p. 30.

Hartman, Ferdinand Q., Danville, Pa. Thread-guide and attachment. No. 1,385,047; July 19; v. 288; p. 501.

Harvey, Corbon L., St. Louis, Mo. Loose-leaf binder. No. 1,385,745; July 26; v. 288; p. 720.

Harward, John H., Lawrence, Mass. Door-buffer. No. 1,385,448; July 26; v. 288; p. 659.

Hastings, Odie L. (See Iles, E. J., and Hastings,) (Reissue.)

Hatch, Paul F. (See Lunt, F. L., and Hatch.)

Hatcher, Ernest C., Finchley, and T. Rooke, Hampstead, London, England. Reduction-gear. No. 1,384,662; July 12; v. 28; p. 342.

Hatfield, Chester P., Lebanon, Ohio. Protective covering for storage-battery cells. No. 1,384,063; July 12; v. 288; p. 216.

Hauck, Arthur E., deceased, New York, N. Y.; A. H. Stein, executor. Low-pressure oil-burner with an attached combustion-box. No. 1,383,720; July 5; v. 288; p. 96.

Haunz, Charles, Lancaster, N. Y., assignor to Gould Storage Battery Company, Starting means. No. 1,385,210; July 19; v. 288; p. 535.

Hawken, Charles E. H. (See Westgate, J., and Hawken.)

Hawkins, Charles R. (See Smith, Frank L., and Hawkins.)

Hawkins, William E., Amityville, N. Y. Socket-shell for incandescent electric lamps. No. 1,383,626; July 5; v. 288; p. 76.

Hawksworth, David W., assignor to Hutchins Car Roofing Company, Detroit, Mich. Car-Roof. No. 1,385,616; July 26; v. 288; p. 694.

Hawksworth, David W., assignor to Hutchins Car Roofing Company, Detroit, Mich. Car-roof. No. 1,385,617. July 26; v. 288; p. 694.

Hawksworth, David W., assignor to Hutchins Car Roofing Company, Detroit, Mich. Running-board saddle. No. 1,385,618; July 26; v. 288; p. 694.

Hawley, Lee F., Madison, Wis., assignor to United States of America. Producing dense absorbent charcoal. No. 1,385,826; July 26; v. 288; p. 736.

Hawthorn, R. & W., Leslie & Company, *et al.* (See Armstrong, Robert B., assignor.)

Haynes, Roy W., assignor to Penn Rivet Corporation, Philadelphia, Pa. Sheet-metal rivet. No. 1,383,806; July 5; v. 288; p. 114.

Haynie, John W., St. Louis, Mo. Diving-tube. No. 1,385,682; July 26; v. 288; p. 707.

Hays, Clarence J. (See Curtis, Arthur R., assignor.)

Hayt, William A. (See Key, James F., assignor.)

Heacox, Ross D., Washington, D. C. Repairing scored cylinders. No. 1,385,334; July 19; v. 288; p. 559.

Healy, John S., Brooklyn, N. Y. Gas-burning appliance. No. 1,385,545; July 26; v. 288; p. 679.

Heath, Wilfrid P., Chicago, Ill. Making butter. No. 1,384,318; July 12; v. 288; p. 269.

Heath, Wilfrid P., Chicago, Ill. Manufacturing candy. No. 1,384,319; July 12; v. 288; p. 269.

Heberling, John, Rochester, N. Y. Belt-buckle. No. 1,385,945; July 26; v. 288; p. 759.

Hebern, William. (See Gray, A. J., and Hebern.)

Heckenbach, Joseph, assignor to Quality Hardware & Machine Company, Chicago, Ill. Grease-cup. No. 1,385,373; July 26; v. 288; p. 643.

Hedges, Frank. (See Diefenbargh, William, assignor.)

Heider, Henry J., assignor to Heider Manufacturing Company, Carroll, Iowa. Coaster-wagon. No. 1,385,946; July 26, v. 288; p. 759.

Heider Manufacturing Company. (See Heider, Henry J., assignor.)

Heine, Christian F., Hinckley, Ill. Primary-instruction board. No. 1,384,192; July 12; v. 288; p. 242.

Heine, Joseph F. (See Rolle, K., and Heine.)

Heinig, Oscar H., Chicago, Ill. Spool and the like. No. 1,384,562; July 12; v. 288; p. 320.

Heinle, Rudolph B., Brooklyn, N. Y. Collapsible garment-hanger. No. 1,385,449; July 26; v. 288; p. 659.

Heise, Roscoe S., assignor to The Miami Cycle & Mfg. Co., Middletown, Ohio. Cycle construction. No. 1,385,129; July 19; v. 288; p. 519.

Helsing, Raymond A., East Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated. Power modulation for radiotransmission. No. 1,383,807; July 5; v. 288; p. 114.

Heltmann, Frank J., et al. (See Weier, Jacob J., assignor.)

Hemleb, Martin, Elizabeth, N. J., assignor to The Singer Manufacturing Company. Driving and controlling mechanism for power operated machines. No. 1,384,464; July 12; v. 288; p. 299.

Hemphill Company. (See Bosworth, George P., assignor.)

Henderson, Carl, Oak Park, assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill. Inking mechanism for printing-presses. No. 1,383,945; July 5; v. 288; p. 142.

Hendricks, John D., Miami, Fla. Implement for forming grooves in plastic masonry. No. 1,383,301; July 5; v. 288; p. 9.

Henry, Edmond, Paris, France. Rotary pump with sliding plates. No. 1,385,619; July 26; v. 288; p. 694.
Henry, John W. (See Holbrook, Willie L., assignor.)
Hepburn, George A. W. (See Dickinson, H., and Hepburn.)
Herbert, Clarence C., Lincoln, Nebr. Electric water-heater. No. 1,384,719; July 12; v. 288; p. 353.
Herbold, Philip, Galion, Ohio. Folding-seat bed. No. 1,384,833; July 19; v. 288; p. 457.
Herman, Bernadette M. (See Herman, Joseph F., assignor.)
Herman, Joseph F., assignor to B. M. Herman, Washington, D. C. Antiskidding chain for wheels. No. 1,383,628; July 5; v. 288; p. 77.
Herr, Herbert T., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co. Geared-power-developing unit. No. 1,384,834; July 19; v. 288; p. 457.
Herr, Park A., Hillside, N. J., assignor to the Singer Manufacturing Company. Thread-controlling device for sewing-machines. No. 1,385,048; July 19; v. 288; p. 501.
Herring, John A., Okmulgee, Okla. Inclinometer. No. 1,383,946; July 5; v. 288; p. 142.
Herz, Alfred, Chicago, Ill. Means for regulating a system subject to large intermittent loads. No. 1,385,170; July 19; v. 288; p. 527.
Hess, Meyer S., Baltimore, Md. Making shoe-filler. No. 1,383,947; July 5; v. 288; p. 142.

Milliken, Foster, Lawrence, N. Y., assignor to F. Milliken, S. F. Weaver, and J. M. Repplier, as trustees. Alloy. No. 1,385,223; July 19; v. 288; p. 538.
Mills Belt Company. (See Lethern, Albert A., assignor.)
Mills, James H., Gallipolis, Ohio. Inner-tube receptacle. No. 1,383,962; July 5; v. 288; p. 145.
Mills, John, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Radio receiving system. No. 1,385,090; July 19; v. 288; p. 510.
Mills, John, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Signaling. No. 1,385,091; July 19; v. 288; p. 511.
Mills, Louis D., Redwood City, Calif. Recovering valuable solution from mixtures. No. 1,385,701; July 26; v. 288; p. 711.
Mills, Mortimer B., Chicago, Ill. Weight-supporting platform. No. 1,384,478; July 12; v. 288; p. 302.
Milmoe, Michael J., assignor to F. B. Redington Company, Chicago, Ill. Carton-filling machine. No. 1,384,844; July 19; v. 288; p. 459.
Milne, James, and Son. (See McIntyre, John, assignor.)
Milner, Nugent, assignor to H. H. Babcock Company, Watertown, N. Y. Road-vehicle of the motor-truck type. No. 1,384,269; July 12; v. 288; p. 259.
Milnes, John J., Jr., Port Richmond, N. Y. Mold-support. No. 1,383,837; July 5; v. 288; p. 120.
Minck, Paul H., Petersdorf, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc. Manufacturing a wool substitute from cellulose and similar solutions. No. 1,383,742; July 5; v. 288; p. 105.
Miner, William H. (See O'Connor, John F., assignor.)
Mintz, Harry, Boston, Mass. Folding frame. No. 1,385,021; July 19; v. 288; p. 496.
Miserocchi, Guido, Philadelphia, Pa. Concrete railway-tie. No. 1,383,327; July 5; v. 288; p. 14.
Mitchell, J. Ernest. (See Ellerman, Edward, assignor.)
Mitchell, Joseph K., Los Angeles, Calif. Double-current syringe. No. 1,384,771; July 19; v. 288; p. 444.
Mitiska, Carl J., Howell, Ind. Stove. No. 1,384,772; July 19; v. 288; p. 445.
Mock, Nate, London, England. Stamp-inking pad. No. 1,385,022; July 19; v. 288; p. 496.
Moler, Vandivere B. (See Georgi, Constantin, assignor.)
Molony, Stuart B., Wellesley Hills, Mass. Utilising vulcanized waste rubber. No. 1,384,773; July 19; v. 288; p. 445.
Molyneux, George E., Bayonne, N. J., assignor to The Singer Manufacturing Company. Joining fabric sections. No. 1,384,845; July 19; v. 288; p. 460.
Monarch Tag Company, The. (See Kohnle, Frederick, assignor.)
Mongan, John P., Minneapolis, Minn. Locomotive-boiler. No. 1,385,386; July 26; v. 288; p. 646.
Monlon, Basil, assignor of one-half to H. D. Coles, Palms, Calif. Shell magazine and feeder. No. 1,384,145; July 12; v. 288; p. 233.
Mooney, James J., and R. E. Bennett, Wichita Falls, Tex. Portable locomotive-valve-seating machine. No. 1,385,344; July 19; v. 288; p. 561.
Monroe Calculating Machine Company. (See Britten, Edwin F., Jr., assignor.)
Monroe Calculating Machine Company. (See Phinney, Edgar E., assignor.)
Montaruli, Giuseppe V., Rome, Italy. Tubular ship's hull. No. 1,385,790; July 26; v. 288; p. 729.
Montel, Alva, Claypool, Ind. Vehicle-body hanger. No. 1,383,415; July 5; v. 288; p. 33.
Montgomery, Donn H., Denver, Colo. Spring for motor-vehicles. No. 1,384,146; July 12; v. 288; p. 233.
Monto, Joseph, Cleveland Heights, and A. R. Curtis; said Curtis assignor to J. Hays, Cleveland, Ohio. Metal-coating machine. No. 1,383,555; July 5; v. 288; p. 61.
Montrose, Frank, Cleveland, Ohio. Check-printing machine. No. 1,384,708; July 12; v. 288; p. 351.
Moore, Edward Y., Cleveland, Ohio. Trolley-hoisting mechanism. No. 1,384,709; July 12; v. 288; p. 351.
Moore, Frank, Los Angeles, Calif. Testing device for transmission-line insulators. No. 1,385,639; July 26; v. 288; p. 699.
Moore, Frederick A. (See Dupré, Wilfred, assignor.)
Moore, George D. (See McKoy, E. A., and Moore.) (Reissue.)
Moore, Warren K., New Castle, Pa. Apparatus for dressing engine-cylinders. No. 1,384,625; July 12; v. 288; p. 333.
Morandi, Giuseppe, Florence, Italy. Wooden article and making the same. No. 1,385,887; July 26; v. 288; p. 646.
Mordey, William M., Westminster, England. Heat treatment of tramway and other rails. No. 1,383,963; July 5; v. 288; p. 146.
Morell, Elgin, New York, N. Y. Sheet-counter. No. 1,384,710; July 12; v. 288; p. 351.
Moren, Swan E., Biwabik, Minn. Briquet-machine. No. 1,384,206; July 12; v. 288; p. 245.
Morgan Construction Company. (See Carroll, Elbert H., assignor.)
Morgan, David F., Atlanta, Ga. Toy. No. 1,385,883; July 26; v. 288; p. 748.
Morgan & Wright. (See Abbott, Adrian O., Jr., assignor.)
Morgan and Wright. (See Davis, Merrill, assignor.)
Mori, Katsukichi, Tokyo, Japan. Water-meter. No. 1,384,329; July 12; v. 288; p. 271.
Morley, George W. (See Kemp, Edward, assignor.)
Morris, James W., and J. L. Ruddick, Oakland, Calif. Mop-head. No. 1,384,147; July 12; v. 288; p. 234.
Morrison, Arthur, Hamilton, Ill. Hog-feeder. No. 1,383,655; July 5; v. 288; p. 82.
Mortimer, Charles G., East Orange, N. J., assignor to National Binding Machine Company, New York, N. Y. Strip-serving device. No. 1,384,081; July 12; v. 288; p. 220.
Mortimer, Charles G., East Orange, N. J., assignor to National Binding Machine Company, New York, N. Y. Strip-serving machine. No. 1,384,082; July 12; v. 288; p. 220.
Mortimer, Louis A., assignor to Western Electric Company, Incorporated, New York, N. Y. Signaling system. No. 1,384,398; July 12; v. 288; p. 286.
Mortimer, Louis A., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,383,743; July 5; v. 288; p. 101.
Morton, Thomas, Rutherglen, Scotland. Internal-combustion engine. No. 1,384,846; July 19; v. 288; p. 460.
Mosca, Alessandro, Turin, Italy. Support for air-pumps of bicycles and like vehicles. No. 1,385,260; July 19; v. 288; p. 545.
Moshier, James W., assignor to The Wallace Barnes Company, Bristol, Conn. Hammering-handle with interchangeable tools. No. 1,384,330; July 12; v. 288; p. 271.
Moss, Sanford A., Lynn, Mass., assignor to General Electric Company. Ejector fluid-pump. No. 1,385,884; July 26; v. 288; p. 748.
Mosure, Thomas J., Niles, Ohio. Time-controlled advertising device. No. 1,384,479; July 12; v. 288; p. 302.
Möthe, Rudolf, Solingen, Germany. Nail-scissors. No. 1,383,556; July 5; v. 288; p. 61.
Mouchet, Theodore S., Bowersville, assignor to Perfect Pea Picker Company, Hartwell, Ga. Pea-picker. No. 1,384,626; July 12; v. 288; p. 334.
Mountford, Thomas, Newark, N. J. Setting for precious stones. No. 1,385,702; July 26; v. 288; p. 712.
Mowry, David C., Geneva, Nebr. Road-working machine. No. 1,384,207; July 12; v. 288; p. 246.
Moyer, Fredellia H., Cleveland, Ohio, assignor to General Rim Company, New York, N. Y. Demountable rim. (Reissue.) No. 15,166; July 26; v. 288; p. 766.
Moynihan, Jeremiah A., Minneapolis, Minn. Car-replacer. No. 1,385,571; July 26; v. 288; p. 685.
Mrazek, Joseph, New York, N. Y. Container. No. 1,383,838; July 5; v. 288; p. 121.
Mueller, Adolph, trustee. (See Mueller, P., and Schuermann, assignors.)
Mueller, Adolph, trustee. (See Mueller, P., Schuermann, and Mueller, assignors.)
Mueller, Bernhard A., East St. Louis, Ill. Air-moistener for hot-air furnaces. No. 1,384,331; July 12; v. 288; p. 271.
Mueller, Joseph, Terre Haute, Ind. Clutch-release. No. 1,383,328; July 5; v. 288; p. 14.
Mueller, Philip, and A. C. Schuermann, assignors to A. Mueller, trustee, Decatur, Ill. Machine for flanging soft-metal pipes. No. 1,383,839; July 5; v. 288; p. 121.
Mueller, Philip, A. C. Schuermann, and R. H. Mueller, assignor to A. Mueller, trustee, Decatur, Ill. Machine for flanging soft-metal pipes. No. 1,383,840; July 5; v. 288; p. 121.
Mueller, Robert H. (See Mueller, P. Schuermann, and Mueller.)
Mueller, Theodore C., assignor of one-half to W. L. Kemper, Topeka, Kans. Sealing device. No. 1,385,749; July 26; v. 288; p. 721.
Mukojima, Yuji, Minowa, near Tokyo, Japan. Double-flow fountain-pen or reservoir-pen. No. 1,383,416; July 5; v. 288; p. 33.
Mullenux, Brisco J., Afton, N. Y. Hose-coupling. No. 1,384,332; July 12; v. 288; p. 271.
Müller, Fred W., Hoboken, N. J. Bottle-filling apparatus. No. 1,384,537; July 12; v. 288; p. 314.
Müller, Fred W., Hoboken, N. J. Bottle-filling apparatus. No. 1,384,538; July 12; v. 288; p. 315.
Müller, Friederich, assignor to Pratt & Whitney Company, Hartford, Conn. Relieving-lathe. (Reissue.) No. 15,157; July 19; v. 288; p. 563.
Mullican, Charles H., Macy, Ind. Lamp-burner. No. 1,383,964; July 5; v. 288; p. 146.
Mullin, Francis R. (See McSwiney, Daniel J., assignor.)
Mulvihill, Daniel C., Hannibal, Mo. Switch stand and target. No. 1,384,148; July 12; v. 288; p. 234.
Mumford Molding Machine Company. (See Gates, Philetus W., assignor.)
Münder y Barrié, Arturo, Habana, Cuba. Faucet. No. 1,384,670; July 12; v. 288; p. 343.

Muntz, John W., Holgate, Ohio. Blower. No. 1,385,261; July 19; v. 288; p. 545.
Muns, William. (See Marvin, S. S., and Muns.)
Murdick, Everett C. (See Graham, J. H., and Murdick.)
Murdock, Kelso, assignor to The Murdock Manufacturing and Supply Co., Cincinnati, Ohio. Supply and drain cap for antifreeze-hydrants. No. 1,385,572; July 26; v. 288; p. 685.
Murdock Manufacturing and Supply Co., The. (See Murdock, Kelso, assignor.)
Murphy, Daniel E., assignor of one-half to E. M. Fry, Uniontown, Pa. Wheel-hub-locking device. No. 1,384,083; July 12; v. 288; p. 220.
Murphy, G. W. J., Company. (See Bourque, David, assignor.)
Murphy, Michael, Youngstown, Ohio. Safety connecting-rod for automatic stokers. No. 1,384,270; July 12; v. 288; p. 259.

Wareing, J., and A. Hill, Rochdale, England. Impeller for centrifugal pumps. No. 1,383,354; July 5; v. 288; p. 20.

Warne, Frederick C., assignor to Roderick Lean Manufacturing Company, Mansfield, Ohio. Tractor-drawn tillage implement. No. 1,384,790; July 19; v. 288; p. 448.

Warner, Frederick W., Toronto, Ontario, Canada. Automatic gas-valve for water-heaters. No. 1,385,853; July 26; v. 288; p. 742.

Warter, Frank A., Perth Amboy, N. J. Valve. No. 1,385,058; July 19; v. 288; p. 504.

Washington Iron Works. (See Berger, Knute, assignor.)

Waterfield, Frank. (See Olsen, G. J., and Waterfield.)

Wasserfallen, Charles F., assignor to Detroit Tire Carrier Co., Detroit, Mich. Tire-rim carrier. No. 1,384,222; July 12; v. 288; p. 249.

Waterman, Charles A., Boston, and H. F. Smith, Medford, assignors to General Motorcycle Sales Company, Boston, Mass. Motorcycle-saddle. No. 1,384,791; July 19; v. 288; p. 448.

Waterman, Lewis E., assignor to Emerson-Brantingham Company, Rockford, Ill. Power-lift plow. No. 1,384,792; July 19; v. 288; p. 448.

Watkins, Charles W., Dorrancetown, Pa. Switch for telephone-lines. No. 1,383,355; July 5; v. 288; p. 20.

Watkins, Gustav H., Jacksonville, Fla. Spanner-wrench. No. 1,384,684; July 12; v. 288; p. 346.

Watson, Bazel R., Everett, Wash. Saw-handle. No. 1,383,503; July 5; v. 288; p. 50.

Watson, Rommie P., Wilson, N. C. Tool for heading hogsheads. No. 1,384,650; July 12; v. 288; p. 339.

Watt, Glenn T., Minden, Nebr. Motor-vehicle lock. No. 1,385,030; July 19; v. 288; p. 498.

Watterson, William A., Eucharena, New South Wales, Australia. Apparatus for economizing fuel. No. 1,384,223; July 12; v. 288; p. 249.

Waugh, Edward H., assignor to Smith Cannery Machines Company, Seattle, Wash. Scraper for fish-dressing machines. No. 1,384,877; July 19; v. 288; p. 466.

Weagant, Roy A., Roselle Park, N. J., assignor, by mesne assignments, to Radio Corporation of America. Means for generating electrical oscillation. No. 1,384,108; July 12; v. 288; p. 225.

Weasler, Joseph, Cascade, Wis. Baby-carriage. No. 1,385,959; July 26; v. 288; p. 762.

Weaver, Clayton B., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Sheet-metal-bending machine. No. 1,384,814; July 19; v. 288; p. 453.

Weaver, S. Fullerton, *et al.*, trustees. (See Milliken, Foster, assignor.)

Weaver, Thomas D., assignor to Humphryes Manufacturing Company, Mansfield, Ohio. Power-pump. No. 1,383,885; July 5; v. 288; p. 130.

Webb, Jean F., Sr., New York, N. Y. Water-silencer. No. 1,383,886; July 5; v. 288; p. 130.

Weber, Bernard F., and F. E. Woodford, Chicago, Ill.; said Woodford assignor, by mesne assignments, to R. C. Penfield, New York, N. Y. Hoisting and conveying grapple. No. 1,384,793; July 19; v. 288; p. 449.

Weber, Mathias J., assignor to Continental Scale Works, Chicago, Ill. Weighing-scale. No. 1,383,604; July 5; v. 288; p. 51.

Weber, Mathias J., assignor to Continental Scale Works, Chicago, Ill. Weighing and measuring device. No. 1,383,605; July 5; v. 288; p. 51.

Weber, Walter S., assignor to W. H. Luden, Reading, Pa. Box-lining mechanism. No. 1,383,682; July 5; v. 288; p. 88.

Wedman, Otto, Tacoma, Wash. String-cutter. No. 1,384,651; July 12; v. 288; p. 339.

Weed, Harry D., U. S. Army. Safety-release wire-holder for aerial bombs. No. 1,385,598; July 26; v. 288; p. 690.

Wegner, Julius, assignor to H. Spadone and W. W. Spadone, New York, N. Y. Cutting and stripping machine. No. 1,384,984; July 19; v. 288; p. 488.

Weichhart, Henry A., assignor to The California Tool Works, San Francisco, Calif. Stud-driving wrench. No. 1,384,417; July 12; v. 288; p. 289.

Weier, Jacob J., assignor of one-third to F. J. Heitmann and one-third to W. A. Klatt, Chicago, Ill. Detachable motor-truck crawler. No. 1,383,356; July 5; v. 288; p. 20.

Weig, Ernest J. F., New York, N. Y. Garment-fastener. No. 1,384,685; July 12; v. 288; p. 346.

Weigel, John A. (See Kalberer, G. J., and Weigel.)

Weir Frog Company, The. (See Goldsmith, Nathaniel O., assignor.)

Weisgerber, Edwin C., U. S. Army. Valve-packing grease. No. 1,384,714; July 12; v. 288; p. 352.

Welthaus, John J., North Vernon, assignor of one-half to M. C. Ainsberry, Rushville, Ind. Oil-vaporizer. No. 1,384,004; July 5; v. 288; p. 155.

Welch, Edward P., Wilsonville, Conn. Gas-gun. No. 1,384,366; July 12; v. 288; p. 279.

Welling, Matthew J., assignor of one-third to J. C. Dysbeck, Chicago, Ill. Can-closure. No. 1,385,290; July 19; v. 288; p. 551.

Wells, Alfred A., Montclair, N. J. Oil-hardening. No. 1,383,887; July 5; v. 288; p. 130.

Wells, Elmer J., Nashua, Iowa. Stay-iron. No. 1,385,765; July 26; v. 288; p. 724.

Wells, Fred B., assignor to C. Durant, Hillyard, Wash. Remedy for hemorrhoids. No. 1,385,195; July 19; v. 288; p. 532.

Wells, John, Cairo, Egypt. Gas-producer. No. 1,385,291; July 19; v. 288; p. 551.

Wells, John F., Cairo, Egypt. Process and apparatus for carbonizing wood and other carbonaceous material. No. 1,383,888; July 5; v. 288; p. 130.

Wendeler, Ernst, assignor to Firm Deutsche Kraftspflug-Gesellschaft M. B. H., Berlin, Germany. Motor-plow. No. 1,385,960; July 26; v. 288; p. 762.

Wendelken, Richard, assignor to J. Winter, New York, N. Y. Carbureter. No. 1,383,889; July 5; v. 288; p. 131.

Wenderhold, William, assignor to Cru Patents Corporation, New York, N. Y. Universal projector-support. No. 1,383,683; July 5; v. 288; p. 88.

Werner, Lester A., assignor to F. W. Pinkus, New York, N. Y. Monogram-printing device. No. 1,385,766; July 26; v. 288; p. 724.

Wernery, Lester A., Brooklyn, N. Y., assignor to B. C. Stickney, Elizabeth, N. J. Indexed card system. No. 1,383,684; July 5; v. 288; p. 89.

Wescott, William B., Wellesley, assignor to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass. Motion-picture camera. No. 1,383,357; July 5; v. 288; p. 20.

West Coast Kalsomine Company. (See Ball, Frank, assignor.)

Westcott, Henry P., Erie, Pa. Attachment for differential and static pressure gages. No. 1,385,234; July 19; v. 288; p. 540.

Westerberg, Carl G., Monessen, Pa. Rim for vehicle-wheels. No. 1,383,358; July 5; v. 288; p. 21.

Westerlund, Charlie, Birmingham, Ala., assignor of one-third to F. W. Bostrom, Chicago, Ill. Heater attachment for grates and stoves. No. 1,383,506; July 5; v. 288; p. 51.

Western Electric Company. (See Arnold, Harold D., assignor.)

Western Electric Company. (See Bellamy, Harry T., assignor.)

Western Electric Company. (See Conway, Roy D., assignor.)

Western Electric Company. (See Edelmann, Otto, assignor.)

Hares Motors, Inc., New York, N. Y. "We Shall Keep Faith." (For Advertising Purposes for Motor-Cars.) No. 5,677; July 12; v. 288; p. 430.

Heinz, H. J., Co., Pittsburgh, Pa. "Good Foods for Young Appetites Heinz Oven Baked Beans." (For Advertising Purposes for Heinz Oven-Baked Beans.) No. 5,665; July 5; v. 288; p. 203.

Heinz, H. J., Co., Pittsburgh, Pa. "Makes Eating More Fun." (For Heinz Apple-Butter.) No. 5,666; July 5; v. 288; p. 203.

Heinz, H. J., Co., Pittsburgh, Pa. "'Here's a Meal Already Cooked' Heinz Spaghetti Cooked Ready to Serve." (For Heinz Cooked Spaghetti.) No. 5,667; July 5; v. 288; p. 203.

Lorillard, P., Company, Inc., New York, N. Y. "It Aint Toothache—It's Climax." (For Chewing-Tobacco.) No. 5,671; July 5; v. 288; p. 203.

Miller Rubber Co., The, Akron, Ohio. "I am Penalized If One Comes Back." (For Advertisement of Tires.) No. 5,668; July 5; v. 288; p. 203.

O'Bryan Brothers, Inc., Nashville, Tenn. "Duck Head." (For Overalls.) No. 5,669; July 5; v. 288; p. 203.

Palmolive Company, The, Milwaukee, Wis. "The Cosmetic Oils of Cleopatra Combined in a Cake of Soap." (For Advertising Purposes for Palmolive Soap.) No. 5,670; July 5; v. 288; p. 203.

Palmolive Company, The, Milwaukee, Wis. "The Girl You Stop to Look At." (For Palmolive Soap.) No. 5,678; July 12; v. 288; p. 430.

Robertson & Sons Shoe Repairers, Inc., New York, N. Y. "Old Rubbers Made New." (For Advertising Purposes for Repair-Patches for Rubber Footwear.) No. 5,672; July 5; v. 288; p. 203.

Rosevear, William B., Jr., Detroit, Mich. "Crop Test." (For Advertising Purposes for Flower and Vegetable Seeds, Shrubs, Plants, and Trees.) No. 5,673; July 5; v. 288; p. 203.

Urie, William A., Los Angeles, Calif. "Acme Dial Planchette No. 1." (For Advertising Purposes for Planchettes.) No. 5,674; July 5; v. 288; p. 203.

Westinghouse Union Battery Company, Swissvale, Pa. "Battery Service." (For Advertising Purposes for Secondary Batteries.) No. 5,679; July 12; v. 288; p. 430.

Westinghouse Union Battery Company, Swissvale, Pa. "Westinghouse Batteries." (For Advertising Purposes for Secondary Batteries.) No. 5,680; June 12; v. 288; p. 430.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED DURING THE MONTH OF JULY, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Accelerator. J. H. M. Michon. No. 1,383,326; July 5; v. 288; p. 14.
Account-register. S. N. Wheeler. No. 1,383,890; July 5; v. 288; p. 121.
Acetaldehyde, Manufacturing. H. W. Matheson. No. 1,384,842; July 19; v. 288; p. 459.
Acetone, Manufacture of. E. Ricard. No. 1,385,888; July 26; v. 288; p. 749.
Acetylene-gas and pressure generator. A. F. Habenicht. No. 1,383,464; July 5; v. 288; p. 43.
Acid phosphate, Apparatus for manufacture of. R. T. Gaston. No. 1,385,126; July 19; v. 288; p. 518.
Acid phosphate or superphosphate, Apparatus for manufacturing. W. T. Doyle. No. 1,383,911; July 5; v. 288; p. 135.
Acid phosphate or superphosphate, Manufacturing. W. T. Doyle. No. 1,383,912; July 5; v. 288; p. 135.
Acid sodium pyro phosphate, Manufacture of. A. Kelly. No. 1,383,990; July 5; v. 288; p. 152.
Acoustic device. H. C. Egerton. No. 1,383,700. July 5; v. 288; p. 92.
Action-bracket. A. G. Gulbransen. No. 1,385,076; July 19; v. 288; p. 507.
Actuating mechanism. D. Karamanous. No. 1,384,135; July 12; v. 288; p. 231.
Adjustable air-separator. W. G. Clark. No. 1,383,984; July 5; v. 288; p. 151.
Adjustable seat. J. P. Eakin. No. 1,385,742; July 26; v. 288; p. 719.
Adjustable stand. A. V. Rufle. No. 1,384,676; July 12; v. 288; p. 345.
Adjustable strut. J. E. Hodges. No. 1,385,546; July 26; v. 288; p. 679.
Adjustable tappet-wrench. R. P. Reynolds. No. 1,385,228; July 19; v. 288; p. 536.
Advertisement device. C. H. Waithman. No. 1,385,194; July 19; v. 288; p. 532.
Advertising device. R. S. Carter. No. 1,385,665; July 26; v. 288; p. 704.
Advertising device. J. Hull. No. 1,385,211; July 19; v. 288; p. 536.
Advertising device. C. McGinn. No. 1,383,828; July 5; v. 288; p. 118.
Advertising device. G. E. McMaster. No. 1,383,413; July 5; v. 288; p. 33.
Advertising device. O. P. Renz. No. 1,384,568; July 12; v. 288; p. 321.
Advertising device, Time-controlled. T. J. Mosure. No. 1,384,479; July 12; v. 288; p. 302.
Advertising novelty. G. H. Rowles. No. 1,384,408; July 12; v. 288; p. 287.
Advertising-sign. D. Sternbergh. No. 1,383,439; July 5; v. 288; p. 38.
Aerial bombs, Safety-release wire-holder for. H. D. Weed. No. 1,385,598; July 26; v. 288; p. 690.
Aerial machines, Control for. A. F. Blaslar. No. 1,385,658; July 26; v. 288; p. 702.
Aerial machines, Control for. A. F. Blaslar. No. 1,385,858; July 26; v. 288; p. 742.
Aerial signal-light. H. L. M. J. Bénard. No. 1,384,659; July 12; v. 288; p. 341.
Aerial vehicles, Electroplated propeller for. M. C. St. John. No. 1,385,802; July 26; v. 288; p. 732.
Aeroplane. J. A. Allardyce. No. 1,383,509; July 5; v. 288; p. 52.
Aeroplane. G. Hrib. No. 1,385,786; July 26; v. 288; p. 728.
Aeroplane. C. F. Jenkins. No. 1,383,465; July 5; v. 288; p. 42.
Aeroplane. S. Marsek. No. 1,383,652; July 5; v. 288. p. 81.
Aeroplane bomb-sight. G. E. Beggs. No. 1,383,969; July 5; v. 288; p. 147.
Aeroplane fabric. C. P. Schlegel. No. 1,384,099; July 12; v. 288; p. 224.
Aeroplanes, Air-current indicator for. L. B. Sperry. No. 1,384,807; July 19; v. 288; p. 464.
Aeroplanes, Fire-extinguisher for. W. C. Clark. No. 1,383,788; July 5; v. 288; p. 110.
Aeroplanes from ships, Device for launching. G. Anderson. No. 1,384,036; July 12; v. 288; p. 211.
Aeroplanes, Ground-speed device for. B. A. Proctor. No. 1,383,660; July 5; v. 288; p. 83.
Agitator. M. M. Fredel and W. Bosanko. No. 1,383,921; July 5; v. 288; p. 137.
Agricultural implement. C. H. Gardner, Jr. No. 1,383,294; July 5; v. 288; p. 7.
Agricultural machine, Motor. A. T. Brown. No. 1,385,041; July 19; v. 288; p. 499.
Air and water heater, Combined. W. M. Keighler. No. 1,384,764; July 19; v. 288; p. 443.
Air-brake safety appliance. H. C. Stokes. No. 1,385,160; July 19; v. 288; p. 525.
Air-compressor. J. Noguera. No. 1,383,657; July 5; v. 288; p. 82.
Air-feeding device. J. Y. King. No. 1,384,838; July 19; v. 288; p. 458.
Air-heater. E. T. Whiting. No. 1,385,651; July 26; v. 288; p. 701.
Air in compartments, Method of and apparatus for controlling the condition of. W. B. S. Whaley. No. 1,384,367; July 12; v. 288; p. 270.
Air-lift booster. J. Oliphant. No. 1,385,708; July 26; v. 288; p. 713.
Air-lift system. J. Oliphant. No. 1,385,706; July 26; v. 288; p. 712.
Air-lift system. J. Oliphant. No. 1,385,707; July 26; v. 288; p. 712.
Air-moistener. J. F. Maloney. No. 1,384,702; July 12; v. 288; p. 350.
Air-separator. T. J. Sturtevant. No. 1,383,441; July 5. v. 288; p. 38.
Air-separator. T. J. Sturtevant. No. 1,384,929; July 19; v. 288; p. 476.
Air-separator. T. J. Sturtevant. No. 1,385,025; July 19; v. 288; p. 497.
Air-separator. T. J. Sturtevant. No. 1,385,846; July 26; v. 288; p. 740.
Air-separator. T. J. Sturtevant. No. 1,385,847; July 26; v. 288; p. 740.
Air-separator. T. J. Sturtevant. No. 1,385,848; July 26; v. 288; p. 741.
Aircraft, Ground-speed meter for. R. L. Chamberlain. No. 1,385,776; July 26; v. 288; p. 726.
Airplane-body. J. L. Shankland. No. 1,384,784; July 19; v. 288; p. 447.
Airplane landing and launching mechanism. J. S. Black. No. 1,383,595; July 5; v. 288; p. 70.
Airplane-screw. C. A. de Giers. No. 1,384,308; July 12; v. 288; p. 266.
Airplanes and other lighter-than-air ships, Adjustable pitch and reversible propeller for. S. W. Carter. No. 1,383,388; July 5; v. 288; p. 27.
Airships, Drift-compensating device for. C. G. Hall. No. 1,385,784; July 26; v. 288; p. 728.
Alarm: *See*—
Burglar-alarm.
Incubator-alarm.
Alarm-signal. V. P. Fedoroff. (Reissue.) No. 15,150; July 12; v. 288; p. 356.
Alcohol from gas containing ethylene, Production of. C. A. Basore. No. 1,385,515; July 26; v. 288; p. 673.
Alcohols, Manufacturing flavoring extracts with higher. B. H. Smith and J. R. Eoff, Jr. No. 1,384,680; July 12; v. 288; p. 345.
Alloy. C. J. Fink. No. 1,384,056; July 12; v. 288; p. 215.
Alloy. F. Milliken. No. 1,385,223; July 19; v. 288; p. 538.
Alloy and producing the same, Metal. J. B. Grenagle. No. 1,385,072; July 19; v. 288; p. 507.
Ammonia-soda process. J. H. MacMahon. No. 1,384,141; July 12; v. 288; p. 232.
Amplifier. S. E. Adair. No. 1,383,275; July 5; v. 288; p. 3.
Amusement device. C. P. La Batt. No. 1,384,963; July 19; v. 288; p. 483.
Amusement device, Submersible. H. Gernsback. No. 1,384,750; July 19; v. 288; p. 440.
Anchor. A. B. Chance. No. 1,384,825; July 19; v. 288; p. 455.
Anchor. A. McNab. No. 1,385,921; July 26; v. 288; p. 755.
Anchor, Mushroom. W. R. Case. No. 1,384,824; July 19; v. 288; p. 455.
Anhydrous antimony trichlorid, Making. O. C. Ralston. No. 1,384,918; July 19; v. 288; p. 474.

Animal-trap. W. B. Gilmore. No. 1,384,890; July 19; v. 288; p. 468.
Animal-trap. J. Gorniak. No. 1,384,611; July 12; v. 288; p. 330.
Animal-trap. T. Kalemba. No. 1,384,698; July 12; v. 288; p. 349.
Antifreeze-hydrants, Supply and drain cap for. K. Murdock. No. 1,385,572; July 26; v. 288; p. 685.
Antileak composition. W. N. Shrum. No. 1,383,572; July 5; v. 288; p. 65.
Antirattler for windows. D. B. Geddes. No. 1,385,208; July 19; v. 288; p. 535.
Antiskid device. W. H. Krug. No. 1,385,010; July 19; v. 288; p. 494.
Antiskid device. V. Kubelka. No. 1,383,823; July 5; v. 288; p. 117.
Antiskid device for vehicles. W. H. Krug. No. 1,383,407; July 5; v. 288; p. 31.
Antiskidding device. W. C. Smiley. No. 1,385,282; July 19; v. 288; p. 549.
Apron. E. C. Pease. No. 1,385,391; July 26; v. 288; p. 647.
Arc-radio-oscillation generator. H. F. Elliott. No. 1,385,121; July 19; v. 288; p. 518.
Arc-welding, Electrode-holder for. O. H. Eschholz. No. 1,384,439; July 12; v. 288; p. 295.
Arm and hand, Artificial. O. L. Dilworth. No. 1,385,817; July 26; v. 288; p. 734.
Arm-fitting. T. P. Cheevers. No. 1,384,826; July 19; v. 288; p. 455.
Armor-piercing tracing-bullet. W. L. Clay, J. C. Beatty, and D. G. Baker. No. 1,384,011; July 5; v. 288; p. 156.
Article-holder. M. Gross. No. 1,385,443; July 26; v. 288; p. 658.
Articles, Machine for reversing small. B. N. Griffing. No. 1,385,000; July 19; v. 288; p. 492.
Asphalt, Manufacture of. H. R. Wardell. No. 1,385,511; July 26; v. 288; p. 672.
Assembling-tool, Motor-driven. C. Strand. No. 1,384,811; July 19; v. 288; p. 452.
Auto-jack. S. Johnston. No. 1,383,545; July 5; v. 288; p. 59.
Auto-signal. J. E. Andregg. No. 1,384,112; July 12; v. 288; p. 226.
Auto-tire lock. W. A. Rigal. No. 1,384,487; July 12; v. 288; p. 304.
Autographic register. J. Q. Sherman. No. 1,385,587; July 26; v. 288; p. 688.
Autographic register. J. Q. Sherman and C. R. Buschmeyer. No. 1,385,588; July 26; v. 288; p. 688.
Automatic closure-controlling apparatus. G. S. O'Neil. No. 1,385,093; July 19; v. 288; p. 511.
Automatic control for processing apparatus. C. H. Durkee. No. 1,385,609; July 26; v. 288; p. 692.
Automatic hood-clamp. G. G. Marx. No. 1,385,568; July 26; v. 288; p. 684.
Automatic trip-motion. M. Bernaudin. No. 1,385,241; July 19; v. 288; p. 541.
Automatically-releasing coupling. A. B. Hulsebos and G. D. Besten. No. 1,384,195; July 12; v. 288; p. 243.
Automatically-releasing coupling. H. B. Hulsebos and G. D. Besten. No. 1,384,258; July 12; v. 288; p. 256.
Automobile-brake attachment. A. G. Schindler. No. 1,383,490; July 5; v. 288; p. 48.
Automobile-bumper. L. Baumgarti. No. 1,383,515; July 5; v. 288; p. 53.
Automobile, Burner for steam-. F. I. du Pont. No. 1,385,366; July 26; v. 288; p. 642.
Automobile construction. H. T. Thomas. No. 1,383,880; July 5; v. 288; p. 129.
Automobile-hoods, Pivot support and retainer for. F. G. Scozzafava. No. 1,383,768; July 5; v. 288; p. 106.
Automobile license-plate, Perpetual. R. Hardesty. No. 1,384,949; July 19; v. 288; p. 481.
Automobile-lift. A. Germar. No. 1,383,800; July 5; v. 288. p. 112.
Automobile-lock. R. Bruner. No. 1,384,594; July 12; v. 288; p. 327.
Automobile-lock. A. J. Gray and W. Hebern. No. 1,383,617; July 5; v. 288; p. 74.
Automobile-lock. W. A. Lowery. No. 1,384,075; July 12; v. 288; p. 218.
Automobile-lock. E. R. Perkins. No. 1,383,659; July 5; v. 288; p. 83.
Automobile-lock. F. Stanley. No. 1,385,479; July 26; v. 288; p. 666.
Automobile-lock, Theft-warning. J. K. McDonald. No. 1,385,461; July 26; v. 288; p. 662.
Automobile-locking device. J. H. Hissong. No. 1,384,697; July 12; v. 288; p. 349.
Automobile-radiator cap. T. O. Bussler. No. 1,385,304; July 19; v. 288; p. 553.
Automobile-signal. C. Hoffman. No. 1,383,632; July 5; v. 288; p. 77.
Automobile signal. C. H. Landis. No. 1,383,312; July 5; v. 288; p. 11.
Automobile-signal. J. A. Southwell. No. 1,383,870; July 5; v. 288; p. 127.
Automobile-signal. J. H. Van Sciver. No. 1,385,596; July 26; v. 288; p. 689.
Automobile-signal casing. S. Goldstein. No. 1,385,913; July 26; v. 288; p. 753.
Automobile-spring. G. C. Jones. No. 1,383,723; July 5; v. 288; p. 97.
Automobile-support. P. Derrow. No. 1,384,798; July 19; v. 288; p. 450.
Automobile-tire lock. P. F. Augenbraun. No. 1,384,549; July 12; v. 288; p. 317.
Automobile-tire tool, Combination. F. Emmenegger. No. 1,384,385; July 12; v. 288; p. 283.
Automobile-trailer. E. Ellerman. No. 1,385,437; July 26; v. 288; p. 656.
Automobile-wheel. J. L. Kuns. No. 1,384,902; July 19; v. 288; p. 471.
Automobile-wheels, Demountable rim for. J. H. Wagenhorst. No. 1,383,679; July 5; v. 288; p. 87.
Automobile-windshields, Sunshade for. A. Pearce. No. 1,384,275; July 12; v. 288; p. 260.
Automobiles, Accelerator for. A. C. Rosenbrook. No. 1,385,496; July 26; v. 288; p. 669.
Automobiles, detachable gear for. J. M. Meredith, Jr. No. 1,384,623; July 12; v. 288; p. 333.
Automobiles, Detachable truck-body for. J. K. Shannon. No. 1,384,162; July 12; v. 288; p. 236.
Automobiles, Direction-indicator for. M. U. Giovannetti. No. 1,383,931; July 5; v. 288; p. 139.
Automobiles, Fuel-feeding system for. W. H. Muxzy. No. 1,385,337; July 19; v. 288; p. 559.
Automobiles, Glare-shade for. E. Horn. No. 1,385,131; July 19; v. 288; p. 519.
Automobiles, Housing for transmission-gears and axles of. T. E., Jr., and J. B. Murray. No. 1,384,480; July 12; v. 288; p. 302.
Automobiles, Illuminating-sign for. E. Kemp. No. 1,385,006; July 19; v. 288; p. 493.
Automobiles, Permutation-lock for. H. E. Dakin. No. 1,385,343; July 19; v. 288; p. 561.
Automobiles, Rain and sun shield for. E. L., H. T., and S. J. Stanton. No. 1,384,574; July 12; v. 288; p. 322.
Automobiles, Safety-lock for. H. M. Brower. No. 1,383,904; July 5; v. 288; p. 134.
Automobiles, Signal-indicator for. J. G. Lucas. No. 1,385,016; July 19; v. 288; p. 495.
Automobiles, Spring-hanger for. C. E. Starr. No. 1,383,579; July 5; v. 288; p. 66.
Automobiles, Spring suspension for. J. Sunnen. No. 1,384,167; July 12; v. 288; p. 237.
Automobiles, Switch for stop-signals for. A. L. Koenig. No. 1,383,821; July 5; v. 288; p. 117.
Automobiles, Transmission-gear for. W. F. Penrod. No. 1,384,481; July 12; v. 288; p. 302.
Auxiliary air-feed. P. E. Kline. No. 1,385,213; July 19; v. 288; p. 536.
Axle assembly, Rear-. A. M. Leoni. No. 1,385,082; July 19; v. 288; p. 509.
Axle, Emergency-. W. A. McQuagge. No. 1,383,554; July 5; v. 288; p. 61.
Axle for running-gears of wagons. F. M. Jacob. No. 1,385,324; July 19; v. 288; p. 557.
Axle-housings, Forming. A. L. Putnam. No. 1,384,485; July 12; v. 288; p. 303.
Axles, Making vehicle-. G. M. Carter. No. 1,385,483; July 26; v. 288; p. 666.
Baby-carriage. J. Weasler. No. 1,385,959; July 26; v. 288; p. 762.
Baby-jumper. G. B. Conley. No. 1,384,181; July 12; v. 288; p. 240.
Bag: *See*—
Cotton-picker's bag. Harvesting-bag.
Golf-bag.
Bag-handling apparatus. J. J. Curran. No. 1,383,790; July 5; v. 288; p. 111.
Bags, Frame for traveling-. S. Dresner. No. 1,384,433; July 12; v. 288; p. 293.
Baggage-tag. C. A. Fetters. No. 1,384,457; July 12; v. 288; p. 298.
Bailer. I. Swartz. No. 1,385,760; July 26; v. 288; p. 723.
Bait, Paste. J. M. Hickson and D. A. Young. No. 1,384,320; July 12; v. 288; p. 269.
Bait, Plug-. L. J. Lane. No. 1,385,627; July 26; v. 288; p. 696.
Baking material, (updraft-kiln,) Apparatus for. I. M. Justice and G. A. Willigman. No. 1,385,686; July 26; v. 288; p. 708.
Baling-press. W. R. Fletcher. No. 1,385,439; July 26; v. 288; p. 657.
Balloon, Kite-. R. H. Upson. No. 1,385,972; July 26; v. 288; p. 764.
Band, Double-bar arch-. J. E. Canning. No. 1,385,775; July 26; v. 288; p. 726.
Bandage. J. G. Homan. No. 1,384,467; July 12; v. 288; p. 300.
Banjo-bridge. W. Post. No. 1,383,752; July 5; v. 288; p. 103.
Bar: *See*—
Pressure-bar.
Bars, Removable blade for cutter-. E. B. Whitmoyer. No. 1,384,933; July 19; v. 288; p. 477.
Barrel-protector. W. F. Meek. No. 1,384,704; July 12; v. 288; p. 350.
Base-exchanging. W. C. Foster. No. 1,385,124; July 19; v. 288; p. 518.
Baskets, Apparatus for making. W. E. Asplin and H. Wisander. No. 1,383,280; July 5; v. 288; p. 4.
Battery electrolyte, Storage. F. D. Cheney. No. 1,385,305; July 19; v. 288; p. 553.
Battery-plate. T. W. Thomson. No. 1,385,507; July 26; v. 288; p. 672.

Battery-water-replenishing device. J. R. Longstreet. No. 1,383,411; July 5; v. 288; p. 32.
Bean-snipping machine. C. J. Hooker and B. Roberts. No. 1,385,550; July 26; v. 288; p. 680.
Bearing. E. H. Crutchfield and A. F. Covert. No. 1,385,906; July 26; v. 288; p. 752.
Bearing. R. Hildebrand. No. 1,385,683; July 26; v. 288; p. 707.
Bearing. G. C. Jett. No. 1,383,466; July 5; v. 288; p. 43.
Bearing, Adjustable chain oil-. H. A. Jones and E. W. Struve. No. 1,385,135; July 19; v. 288; p. 520.
Bearing, Ball-. H. Sundhaussen. No. 1,384,002; July 5; v. 288; p. 154.
Bearing-brass. H. G. Martin. No. 1,383,958; July 5; v. 288; p. 145.
Bearing, Center-. A. A. Gagarin. No. 1,384,187; July 12; v. 288; p. 242.
Bearing device, Ball-. S. Baum. No. 1,383,372; July 5; v. 288; p. 24.
Bearing-fitting tool. B. Dymond. No. 1,383,454; July 5; v. 288; p. 41.
Bearing for rollers. A. M. Ayers. No. 1,385,418; July 26; v. 288; p. 653.
Bearing rim-lug, Ball-. W. J. Smith. No. 1,383,435; July 5; v. 288; p. 37.
Bearing, Roller-. W. Douglas. No. 1,383,292; July 5; v. 288; p. 7.
Bearing, Roller-. H. W. Robinson. No. 1,383,758; July 5; v. 288; p. 104.
Bearing, Step-. R. R. Scheibe. No. 1,385,400; July 26; v. 288; p. 649.
Bearings, Machine for dressing fitted. F. L. Smith and C. R. Hawkins. No. 1,384,163; July 12; v. 288; p. 237.
Beaters, Operating device for. J. O. H. Cazenove. No. 1,385,605; July 26; v. 288; p. 691.
Bed. T. H. Griffith. No. 1,385,045; July 19; v. 288; p. 500.
Bed. G. R. McAllaster. No. 1,383,648; July 5; v. 288, p. 80.
Bed and table, Combination. C. H. Gunn. No. 1,385,446; July 26; v. 288; p. 658.
Bed-bottom structure, Spring-. W. B. Anderson. No. 1,384,111; July 12; v. 288; p. 226.
Bed, Folding. T. Whitstance-Smith. No. 1,384,932; July 19; v. 288; p. 477.
Bed, Folding-seat. P. Herbold. No. 1,384,833; July 19; v. 288; p. 457.
Bed-mounting. H. G. Bishop. No. 1,384,008; July 5; v. 288; p. 156.
Bed, Narrow-doorway wall-. G. W. Peek. No. 1,383,420; July 5; v. 288; p. 34.
Bed, Sofa-. R. Verstraete. No. 1,383,501; July 5; v. 288; p. 50.
Bed-spring cover, Sanitary. H. H. Luedecke. No. 1,383,734; July 5; v. 288; p. 99.
Beds and chairs, Bookrest for hospital. M. L. Dodge. No. 1,384,744; July 19; v. 288; p. 438.
Beds, Corner-fastening for. B. H. Jones. No. 1,385,173; July 19; v. 288; p. 528.
Beds, Mattress-holder for invalid-. L. S. Coil. No. 1,384,600; July 12; v. 288; p. 328.
Bedpost-hanger. O. Piotler. No. 1,385,794; July 26; v. 288; p. 730.
Bedstead, Adjustable. C. Corer. No. 1,383,907; July 5; v. 288; p. 134.
Bedsteads, Corner-fastening for. W. B. Foster. No. 1,384,126; July 12; v. 288; p. 229.
Belt-controller. W. E. Stromberg and E. H. Schmicking. No. 1,385,728; July 26; v. 288; p. 717.
Belt-drive. C. Pitts. No. 1,383,850; July 5; v. 288; p. 128.
Belt-fastening device. I. M. Jacobs and W. Cramer. No. 1,385,685; July 26; v. 288; p. 708.
Belt guide, Clamp-. J. Martin. No. 1,385,878; July 26; v. 288; p. 747.
Belt-tightener, Automatic. G. N. Goddard and F. A. Smith. No. 1,385,942; July 26; v. 288; p. 759.
Belts, Adjusting device for. J. H. Davis. No. 1,385,309; July 19; v. 288; p. 554.
Bender for bars, rods, and wires. R. V. Williams. No. 1,385,481; July 26; v. 288; p. 666.
Bending rods, bars, or the like, Machine for. H. J. Hardy. No. 1,385,542; July 26; v. 288; p. 678.
Berry cleaner and stemmer. P. Ervin. No. 1,384,455; July 12; v. 288; p. 297.
Bevel-protractor, Fine-adjustment. L. S. Starrett and J. A. Adell. No. 1,384,105; July 12; v. 288; p. 225.
Beveling device. W. M. Garwood. No. 1,385,782; July 26; v. 288; p. 727.
Beverage material and making same. A. A. Horlick. No. 1,384,894; July 19; v. 288; p. 469.
Bilge-block. K. R. Kennison. No. 1,385,487; July 26; v. 288; p. 667.
Binder construction. H. Bernhard. No. 1,384,507; July 12; v. 288; p. 308.
Binder, Loose-leaf. C. L. Harvey. No. 1,385,745; July 26; v. 288; p. 720.
Binder, Temporary. J. Barker. No. 1,384,883; July 19; v. 288; p. 467.
Binder, Temporary. G. P. Wigginton. No. 1,385,163; July 19; v. 288; p. 526.
Bird-trap. J. Gorniak. No. 1,384,610; July 12; v. 288; p. 330.
Bit. H. L. Daugherty. No. 1,384,242; July 12; v. 288; p. 253.
Bit and drill guide. F. Pyron. No. 1,385,227; July 19; v. 288; p. 538.
Bite-taking device. G. S. Davidson. No. 1,385,070; July 19; v. 288; p. 507.
Blast-gate. P. McMurdie. No. 1,384,204; July 12; v. 288; p. 245.

Camera, Motion-picture. W. B. Wescott. No. 1,383,357; July 5; v. 288; p. 20.
Camera-shutter control. B. F. Schmidt. No. 1,385,476; July 26; v. 288; p. 665.
Can: *See*—
Safety oil-can.
Can-caps, Safety-shield for. V. Odquist. No. 1,385,578; July 26; v. 288; p. 686.
Can-closure. M. J. Welling. No. 1,385,290; July 19; v. 288; p. 551.
Can-covers, Machine for fastening. S. A. Bennett. No. 1,385,422; July 26; v. 653.
Can-fastening. J. D. Ellis. No. 1,383,707; July 5; v. 288; p. 92.
Can-labeling machine. G. A. Robinson. No. 1,385,714; July 26; v. 288; p. 714.
Can-opener. J. R. Spencer. No. 1,384,642; July 12; v. 288; p. 337.
Can opening and protecting device. M. M. Cody. No. 1,383,600; July 5; v. 288; p. 71.

Canning-machine. P. Chamberlain. No. 1,384,599; July 12; v. 288; p. 328.
Candles, Feeder for soft. E. B. Ault. No. 1,384,377; July 12; v. 288; p. 281.
Candy and chocolate machine. S. S. Marvin and W. Munz. No. 1,385,462; July 26; v. 288; p. 662.
Candy-lifter. G. H. Schmand. No. 1,385,893; July 26; v. 288; p. 749.
Candy, Manufacturing. W. P. Heath. No. 1,384,319; July 12; v. 288; p. 269.
Cap-spinning frame. J. H. Jones. No. 1,385,078; July 19; v. 288; p. 508.
Car and door-operating mechanism therefor, Dump-. A. Campbell. No. 1,383,288; July 5; v. 288; p. 6.
Car and like vehicle, Railway-. J. Westgate and C. E. H. Hawken. No. 1,384,500; July 12; v. 288; p. 306.
Car, Bicycle side. G. G. Buckland. No. 1,384,300; July 12; v. 288; p. 265.
Car-brake. J. H. Duff. No. 1,384,454; July 12; v. 288; p. 297.
Car bumper, Motor-. F. A. Whitten. No. 1,383,892; July 5; v. 288; p. 131.
Car construction. T. N. Russell. No. 1,385,398; July 26; v. 288; p. 648.
Car construction. T. N. Russell. No. 1,385,399; July 26; v. 288; p. 648.
Car, Convertible gondola ballast-. A. Campbell. No. 1,383,287; July 5; v. 288; p. 6.
Car, Cylinder-. A. N. Kerr. No. 1,385,836; July 26; v. 288; p. 738.
Car, Dump-. H. L. Beach and W. J. Fendner. No. 1,384,819; July 19; v. 288; p. 454.
Car-end construction. F. M. Whyte. No. 1,384,368; July 12; v. 288; p. 279.
Car for motorcycles, Side. L. Belluscio. No. 1,383,900; July 5; v. 288; p. 133.
Car, Freight-. E. Dimond. No. 1,385,206; July 19; v. 288; p. 534.
Car latch, Dump-. W. J. Rundle. No. 1,383,861; July 5; v. 288; p. 125.
Car, Motor-. J. Gangloff. No. 1,385,611; July 26; v. 288; p. 693.
Car of the gondola type, Railway-. S. H. Conwell and C. W. Court. No. 1,384,183; July 12; v. 288; p. 241.
Car-replacer. J. A. Moyniban. No. 1,385,571; July 26; v. 288; p. 685.
Car-roof. D. W. Hawksworth. No. 1,385,616; July 26; v. 288; p. 694.
Car-roof. D. W. Hawksworth. No. 1,385,617; July 26; v. 288; p. 694.
Car-seat. B. Schechter. No. 1,385,279; July 19; v. 288; p. 548.
Car-stop shoe. J. U. Duffy. No. 1,385,528; July 26; v. 288; p. 675.
Car-truck. C. T. Westlake. No. 1,385,737; July 26; v. 288; p. 718.
Cars, Device for loading gasolene in tank-. T. N. Rutherford and E. H. Rudolph. No. 1,385,843; July 26; v. 288; p. 739.
Cars, End reinforcement for box-. G. S. Goodwin. No. 1,384,831; July 19; v. 288; p. 457.
Cars, Foot-lever construction for motor-. M. J. B. Barbaron. No. 1,385,331; July 19; v. 288; p. 558.
Cars, Lifting and swinging support for railway motor-. J. E. Loeffler. No. 1,383,832; July 5; v. 288; p. 119.
Cars, Locking device for motor-. W. Diefenbargh. No. 1,384,026; July 5; v. 288; p. 159.
Cars, Package and article carrier for motorcycle side. W. L. Batty. No. 1,385,771; July 26; v. 288; p. 725.
Cars, Safety appliance for street-. F. D. Macdonald. No. 1,385,259; July 19; v. 288; p. 545.
Cars, Safety brush-brake for railway motor-. S. C. Tanner. No. 1,385,729; July 26; v. 288; p. 717.
Cars, Steam-heating apparatus for railway-. E. H. Gold. No. 1,384,751; July 19; v. 288; p. 440.
Cars, Timber-roller-supporting device for. J. M. Mattix. No. 1,384,770; July 19; v. 288; p. 444.
Cars, Torpedo-removing attachment for hand-. D. A. Hewitt. No. 1,385,003; July 19; v. 288; p. 492.
Carline. W. N. Oehm. No. 1,383,841; July 5; v. 288; p. 121.
Carbon and similar materials, Solidifying. C. J. Randall. No. 1,384,080; July 12; v. 288; p. 221.
Carbon-cutting machine. C. Hambuechen. No. 1,384,756; July 19; v. 288; p. 441.
Carbon, Producing decolorizing. M. B. Punnett and R. A. Whitaker. No. 1,383,755; July 5; v. 288; p. 103.
Carbureter. D. Cole. No. 1,384,429; July 12; v. 288; p. 292.
Carbureter. W. E. Dewey. No. 1,384,799; July 19; v. 288; p. 450.
Carbureter. R. Wendelken. No. 1,383,889; July 5; v. 288; p. 131.
Carbureters, Surface vaporizer attachment for. E. R. Godward. No. 1,383,932; July 5; v. 288; p. 139.
Carbureterlock. C. E. Northrop. No. 1,384,674; July 12; v. 288; p. 344.
Carbureters, Operating and controlling means for. D. L. Winters. No. 1,384,291; July 12; v. 288; p. 263.
Carbureting air with solid fuel, Apparatus for. T. F. Williams, D. W. Coy, and H. B. Pruden. No. 1,385,412; July 26; v. 288; p. 651.
Card system, Indexed. L. A. Wernery. No. 1,383,684; July 5; v. 288; p. 89.
Card, Time and value. G. W. Odell. No. 1,385,576; July 26; v. 288; p. 685.
Carpet-cleaner, Suction. J. H. Graham. No. 1,384,998; July 10; v. 288; p. 491.
Carpet-rug needle. A. M. Schmuck. No. 1,384,973; July 19; v. 288; p. 485.
Carpet-sweeper. J. H. Graham. No. 1,384,999; July 19; v. 288; p. 492.
Carpet-sweeper. J. H. Graham and E. C. Murdick. No. 1,384,997; July 19; v. 288; p. 491.
Carpets, Device for holding. J. P. Rasmussen. No. 1,383,565; July 5; v. 288; p. 63.
Carriage blocks, Taper attachment for sawmill-. I. W. Johnson. No. 1,383,544; July 5; v. 288; p. 59.
Carriage, Cableway-. K. Berger. No. 1,383,782; July 5; v. 288; p. 109.
Carriage, Hosiery-. E. M. Witherell. No. 1,384,547; July 12; v. 288; p. 317.
Carriage, Interchangeable. C. Spiro. No. 1,383,578; July 5; v. 288; p. 66.
Carriages, Shock-absorber for calculating-machine. E. F. Britten, Jr. No. 1,384,592; July 12; v. 288; p. 326.
Carrier: *See*—
Brick-carrier. Running-board carrier.
Luggage-carrier. Tire-rim carrier.
Carrier for laundry articles. D. D. and M. A. MacCormick. No. 1,385,695; July 26; v. 288; p. 710.
Carrier or trolley. F. D. Broga. No. 1,383,585; July 5; v. 288; p. 26.
Carrier systems, Regulating mechanism for pneumatic. J. J. Stoetzel. No. 1,385,727; July 26; v. 288; p. 717.
Cart, Child's. F. J. Schroeder. No. 1,384,160; July 12; v. 288; p. 236.
Cart, Harrow-. D. B. Frisby. No. 1,385,535; July 26; v. 288; p. 677.
Carton. M. S. McGurn. No. 1,383,735; July 5; v. 288; p. 99.
Carton, Collapsible. F. M. Joslin. No. 1,384,069; July 12; v. 288; p. 217.
Carton-filling machine. M. J. Milmoe. No. 1,384,844; July 19; v. 288; p. 459.
Carton-setting-up machines, Stamping attachment for. R. E. Jones and T. P. A. Von Thien. No. 1,383,636; July 5; v. 288; p. 78.
Case: *See*—

Cutter-head. L. S. Hall. No. 1,384,524; July 12; v. 288; p. 312.
Cutting and punching machine. C. J. Salviolo. No. 1,383,762; July 5; v. 288; p. 105.
Cutting and stripping machine. J. Wegner. No. 1,384,984; July 19; v. 288; p. 488.
Cutting bacon into thin slices, Machine for. F. Schermer. No. 1,384,732; July 12; v. 288; p. 355.
Cutting-machine. E. M. Waring. No. 1,384,107; July 12; v. 288; p. 225.
Cutting machine, Stock-. E. E. Winkley. No. 1,385,601; July 26; v. 288; p. 691.
Cutting mechanism. R. Grimm and E. F. Rhode. No. 1,384,060; July 12; v. 288; p. 215.
Cutting mechanism. C. F. Smith. No. 1,383,868; July 5; v. 288; p. 126.
Cutting-tool holder. L. F. Calhoun. No. 1,385,519; July 26; v. 288; p. 674.
Cycle construction. R. S. Helse. No. 1,385,129; July 19; v. 288; p. 519.
Cycle stand and lock, Combined. E. Maurice. No. 1,385,020; July 19; v. 288; p. 496.
Cylinder boring or reaming machine. G. M. Brubaker. No. 1,384,043; July 12; v. 288; p. 212.
Cylinder for wood-pulp and cellulose, Strainer. R. E. Wagner. No. 1,385,340; July 19; v. 288; p. 560.
Cylinders, Apparatus for dressing engine-. W. K. Moore. No. 1,384,625; July 12; v. 288; p. 333.
Cylinders, Repairing scored. Z. J. Eury. No. 1,384,456; July 12; v. 288; p. 298.
Cylinders, Repairing scored. R. D. Heacox. No 1,385,334; July 19; v. 288; p. 559.
Danger or stop and direction signal. J. G. Maris. No. 1,384,205; July 12; v. 288; p. 245.
Dauber, polisher, &c. A. J. Cochran. No. 1,384,827; July 19; v. 288; p. 456.
Davenport. J. M. Richardson. No. 1,383,485; July 5; v. 288; p. 47.
Deck-plate key. W. Meyer. No. 1,384,705; July 12; v. 288; p. 350.
Demountable-rim contractor. A. Anderson and C. Brown. No. 1,385,353; July 26; v. 288; p. 639.
Dental-engine hand-tool. W. G. Shelton. No. 1,384,975; July 19; v. 288; p. 486.
Dental instrument. W. W. Bolls. No. 1,384,740; July 19; v. 288; p. 437.
Derrick. J. W. Kittredge. No. 1,384,960; July 19; v. 288; p. 483.
Derrick-fitting. R. R. Bloss and W. Schwemiein. No. 1,385,659; July 26; v. 288; p. 703.
Derrick or excavating-machine. J. A. Harman. No. 1,385,543; July 26; v. 288; p. 679.
Desk and chair, Combined school. P. O. Derbyshire. No 1,385,432; July 26; v. 288; p. 655.
Desk, table, and like office furniture. W. Stafford. No. 1,385,233; July 19; v. 288; p. 539.
Desk, Writing-. A. L. Howe. No. 1,385,004; July 19; v. 288; p. 493.
Detector: *See*—
Leak-detector.
Dial-indicator. H. R. Geer. No. 1,384,802; July 19; v. 288; p. 451.
Diaphragm for gramaphones, phonographs, telephones, &c. A. T. Collier. No. 1,385,243; July 19; v. 288; p. 541.
Die. W. S. Thomas. No. 1,383,675; July 5; v. 288; p. 87.
Die, Expanding. M. P. Janisch. No. 1,385,833; July 26; v. 288; p. 738.
Digging-machine, Rotary. A. Rutishauser. No. 1,383,761; July 5; v. 288; p. 105.
Dining service apparatus. H. S. Greenberg. No. 1,384,191; July 12; v. 288; p. 242.
Dining-table service-indicator. E. W. White. No. 1,383,685; July 5; v. 288; p. 89.
Direction-indicator. L. Frank. No. 1,384,248; July 12; v. 288; p. 254.
Direction indicator. L. Frank. No. 1,384,249; July 12; v. 288; p. 255.
Direction-indicator. M. T. McIntyre. No. 1,385,219; July 19; v. 288; p. 537.
Direction-signal. J. G. Roseboom. No. 1,385,230; July 19; v. 288; p. 539.
Dirigible bodies, Steering mechanism for. K. Dougan. No. 1,384,745; July 19; v. 288; p. 439.
Dish-washing machine. J. W. Crooks. No. 1,385,203; July 19; v. 288; p. 534.
Disintegrating and conserving mechanism. E. A. McKoy and G. D. Moore. (Reissue.) No. 15,165; July 26; v. 288; p. 766.
Disintegrator. J. K. Blum. No. 1,384,821; July 19; v. 288; p. 454.
Disk clutch. E. Goldberger. No. 1,383,717; July 5; v. 288; p. 96.
Disk drills, Oiler for. R. W. Lewis. No. 1,383,957; July 5; v. 288; p. 144.
Disk wheel, Demountable. A. L. Putnam. No. 1,384,405; July 12; v. 288; p. 287.
Dispensing device. F. M. Furber. No. 1,384,127; July 12; v. 288; p. 229.
Dispensing-machine. M. E. Conkling and E. E. Bushell. No. 1,384,687; July 12; v. 288; p. 347.
Display-box. G. M. Bilger. No. 1,383,375; July 5; v. 288; p. 25.
Display-card. W. A. Myers. No. 1,385,923; July 26; v. 288; p. 755.
Display device. T. C. Hutcheson. No. 1,384,727; July 12; v. 288; p. 354.
Display device. C. I. Owen. No. 1,385,225; July 19; v. 288; p. 538.
Display device and forming same. C. B. Kellogg. No. 1,385,834; July 26; v. 288; p. 738.
Display-rack. W. T. Hormes. No. 1,385,875; July 26; v. 288; p. 644.
Display-stand. W. M. and E. Docker. No. 1,385,670; July 26; v. 288; p. 705.
Display-stand. C. G. Sather. No. 1,384,351; July 12; v. 288; p. 276.
Distillation-furnace. J. N. Wingett. No. 1,384,878; July 19; v. 288; p. 466.
Distributer structure. A. A. Kent. No. 1,385,625; July 26; v. 288; p. 695.
Ditch-filling machine. O. Lee. No. 1,384,617; July 12; v. 288; p. 331.
Diving-armor, Flexible joint for. A. P. Marr. No. 1,385,322; July 5; v. 288; p. 13.
Diving-tube. J. W. Haynie. No. 1,385,682; July 26; v. 288; p. 707.
Doll. L. W. Richards. No. 1,384,731; July 12; v. 288; p. 355.
Domestic heater. J. H. Stettner. No. 1,383,671; July 5; v. 288; p. 86.
Door-buffer. J. H. Harward. No. 1,385,448; July 26; v. 288; p. 659.
Door-closer, Liquid. W. D. Putnam. No. 1,383,339; July 5; v. 288; p. 17.
Door, Collapsible grain-. B. F. Graham. No. 1,384,190; July 12; v. 288; p. 242.
Door-controlling device. L. C. Norton. No. 1,385,389; July 26; v. 288; p. 646.
Door-fastening. R. N. Clanin. No. 1,385,814; July 26; v. 288; p. 734.
Door-fastener. J. G. Fraser. No. 1,385,125; July 19; v. 288; p. 518.
Door fastener, Grain-. C. Wing. No. 1,384,794; July 19; v. 288; p. 449.
Door-hanger. R. S. Jordan. No. 1,384,763; July 19; v. 288; p. 443.
Door-hanger. L. Kutes. No. 1,384,325; July 12; v. 288; p. 270.
Door-latch. H. McVittie. No. 1,384,620; July 12; v. 288; p. 332.
Door, Metallic. E. H. McCloud. No. 1,385,694; July 26; v. 288; p. 710.
Door-operating mechanism. J. M. Pombo. No. 1,383,851; July 5; v. 288; p. 123.
Door, Refrigerator-. G. H. Rice. No. 1,384,852; July 19; v. 288; p. 461.
Doors, Antirattling device for automobile-. C. C. Blackmore. No. 1,384,506; July 12; v. 288; p. 308.
Doors, Operating mechanism for exit-. W. B. Bolles. No. 1,383,974; July 5; v. 288; p. 148.
Douche, Sanitary. W. A. E. Pfaff. No. 1,384,210; July 12; v. 288; p. 246.
Draft-rigging. E. Goldberger. No. 1,383,716; July 5; v. 288; p. 96.
Drag-harrow cleaner. G. Kendel. No. 1,383,403; July 5; v. 288; p. 30.
Drag, Road-. F. R. Miller. No. 1,385,789; July 26; v. 288; p. 729.
Drain-plug. N. Becker. No. 1,384,038; July 12; v. 28; p. 211.
Drainer, Dish-. W. B. Wills. No. 1,384,582; July 12; v. 288; p. 324.
Drawbar. C. E. Search. No. 1,385,721; July 26; v. 288; p. 715.
Drawers, Guide or support for. J. Bodenstein. No. 1,385,811; July 26; v. 288; p. 733.
Drier. P. G. Garza. No. 1,384,996; July 19; v. 288; p. 491.
Dry cells, Applying binding-posts to. J. C. Gillette. No. 1,385,783; July 26; v. 288; p. 728.
Dry-kiln. J. F. Hirt. No. 1,385,451; July 26; v. 288; p. 650.
Drying machine, Cylinder-. J. M. McIntyre. No. 1,383,553; July 5; v. 288; p. 61.
Dressing and dyeing moleskins. H. Gabbe. No. 1,384,446; July 12; v. 288; p. 296.
Drift-compensating device. C. G. Hall. No. 1,385,825; July 26; v. 288; p. 736.

Gas-producer. J. Wells. No. 1,385,291; July 19; v. 288; p. 551.
Gas-purifier. C. Bourdon. No. 1,384,380; July 12; v. 288; p. 282.
Gas-regulator, Automatic. W. Kane. No. 1,384,323; July 12; v. 288; p. 270.
Gases, Separating suspended particles from. E. R. Wolcott. No. 1,383,586; July 5; v. 288; p. 68.
Gate: *See*—
Blast-gate. End-gate.
Crossing-gate. Railway-gate.
Gate and chute, End-. J. C. Stephens. No. 1,384,713; July 12; v. 288; p. 352.
Gear, Change-speed. G. von Zweigbergk. No. 1,384,504; July 12; v. 288; p. 307.
Gear-cutters, Making. W. C. Farnum. No. 1,383,707; July 5; v. 288; p. 93.
Gear-cutting machine. E. W. Bullock and G. H. Bryan. No. 1,385,200; July 19; v. 288; p. 533.
Gear-cutting machine. L. J. Evans. No. 1,384,558; July 12; v. 288; p. 319.
Gear, Landing-. W. H. Barling. No. 1,385,770; July 26; v. 288; p. 725.
Gear-making machine. H. J. Schmick. No. 1,385,097; July 19; v. 288; p. 512.
Gear providing automatic compensation for variations in the speed and power transmitted, Transmission-. K. T. Spencer and L. G. Wills. No. 1,384,357; July 12; v. 288; p. 277.
Gear, Reduction-. E. C. Hatcher and T. Rooke. No. 1,384,662; July 12; v. 288; p. 342.
Gear-reduction mechanism. W. C. Farnum. No. 1,383,706; July 5; v. 288; p. 93.
Gear system, Driving-. W. F. Penrod. No. 1,384,483; July 12; v. 288; p. 303.
Gear system, Transmitting-. W. F. Penrod. No. 1,384,482; July 12; v. 288; p. 303.
Gear-teeth, Art of and apparatus for forming. H. J. Schmick. No. 1,384,542; July 12; v. 288; p. 316.
Gear-wheel, Resilient. A. Roth and A. Romang. No. 1,385,796; July 26; v. 288; p. 730.
Gear, Worm-. W. Pohl. No. 1,385,564; July 26; v. 288; p. 699.
Gearing. H. J. Schmick. No. 1,384,541; July 12; v. 288; p. 315.
Gearing. H. J. Schmick. No. 1,384,543; July 12; v. 288; p. 316.
Gearing, Change-speed. A. H. Asprooth and A. M. Leoni. No. 1,385,105; July 19; v. 288; p. 514.
Gearing for washing-machines. F. H. Mayer. No. 1,385,464; July 26; v. 288; p. 662.
Gearing, Reversing-. T. J. Hughes. No. 1,384,388; July 12; v. 288; p. 283.
Gearing, Toothed. L. Jones. No. 1,383,402; July 5; v. 288; p. 30.
Gearing, Variable-speed. W. H. Himes. No. 1,384,758; July 19; v. 288; p. 441.
Gearing, Variable velocity-ratio. E. J. de Normanville. No. 1,383,988; July 5; v. 288; p. 151.
Gears, Hob for cutting involute. C. G. Olson. No. 1,383,844; July 5; v. 288; p. 122.
Generator: *See*—
Acetylene-gas and pressure generator.
Arc-radio-oscillation generator.
Generator. D. W. McLean. No. 1,385,257; July 19; v. 288; p. 544.
Generator for hydrocarbon-burners. J. O. King. No. 1,385,557; July 26; v. 288; p. 682.
Generators, Thermostatic control for steam-. C. Fries and H. W. Fisher. No. 1,384,995; July 19; v. 288; p. 491.
Glass, Apparatus for grinding and polishing plate-. F. E. Slocombe. No. 1,384,278; July 12; v. 288; p. 261.
Glass, Apparatus for sawing. W. Taylor. No. 1,385,731; July 26; v. 288; p. 717.
Glass bottles, Machine for making. C. F. Cox. No. 1,385,428; July 26; v. 288; p. 654.
Glass-cutting apparatus. W. Taylor. No. 1,385,732; July 26; v. 288; p. 718.
Glass-drawing machines, and in the process of drawing glass, Bait for. A. E. Spinasse. (Reissue.) No. 15,143; July 5; v. 288; p. 162.
Glass-grinding tables, Mechanism for shifting plate-. F. E. Troutman. No. 1,385,852; July 26; v. 288; p. 741.
Glass pavement-light. F. L. Keppler. No. 1,385,688; July 26; v. 288; p. 709.

Glassware, Manufacture of. W. H. McSwain. No. 1,384,967; July 19; v. 288; p. 484.
Glazing-clip. H. M. Lutz. No. 1,385,217; July 19; v. 288; p. 536.
Glove. H. Ross. No. 1,385,715; July 26; v. 288; p. 714.
Glove and making same. G. P. Bosworth. No. 1,385,963; July 26; v. 288; p. 963.
Glove, Swimming-. S. J. Niemann. No. 1,384,673; July 12; v. 288; p. 344.
Glycols, Manufacturing flavoring extracts with. B. H. Smith and J. R. Eoff, Jr. No. 1,384,681; July 12; v. 288; p. 345.
Golf-bag, Self-supporting. T. W. May. No. 1,384,078; July 12; v. 288; p. 219.
Golf-club. G. W. Mattern. No. 1,383,654; July 5; v. 288; p. 82.
Golf-practicing means. P. C. Sullivan. No. 1,383,876; July 5; v. 288; p. 128.
Golfer's seat with shades and utensil-hangers, Double combined. J. Skidmore. No. 1,383,771; July 5; v. 288; p. 107.
Grain-bearder. L. N. Dibert. No. 1,385,071; July 19; v. 288; p. 507.
Grain-cleaning mechanism. A. P. Gould. No. 1,383,463; July 5; v. 288; p. 43.
Grain drier and cooler. M. Davis. No. 1,384,689; July 12; v. 288; p. 347.
Grain-shock loader. E. W. Burgess. No. 1,385,939; July 26; v. 288; p. 758.
Granular material, Drying. C. W. Carter. No. 1,384,047; July 12; v. 288; p. 213.
Graphite, Automatic feeding device for. B. U. Hills. No. 1,384,892; July 19; v. 288; p. 469.
Graphophones, Stop mechanism for. E. O. Klemm. No. 1,385,690; July 26; v. 288; p. 709.
Grapple, Hoisting and conveying. B. F. Weber and F. E. Woodford. No. 1,384,793; July 19; v. 288; p. 449.
Grass cutter and lawn-aerator, Bermuda-. A. J. Kerr. No. 1,385,007; July 19; v. 288; p. 493.
Grate-basket. P. F. Semonin. No. 1,385,931; July 26; v. 288; p. 757.
Grate, Traveling. W. Lloyd. No. 1,385,876; July 26; v. 288; p. 746.
Grates and stoves, Heater attachment for. C. Westerlund. No. 1,383,506; July 5; v. 288; p. 51.
Grease-cup. J. B. Blain. No. 1,383,379; July 5; v. 288; p. 25.
Grease-cup. J. Heckenbach. No. 1,385,373; July 26; v. 288; p. 643.
Grinder, Roll-. S. Hansen. No. 1,385,077; July 19; v. 288; p. 508.
Grinding and the like machines, Work-holder for. R. Harman. No. 1,383,941; July 5; v. 288; p. 141.
Grinding-fixture. J. Dupiessie. No. 1,384,726; July 12; v. 288; p. 354.
Grinding-machine. T. Lumsden. No. 1,384,966; July 19; v. 288; p. 484.
Grinding machine, Hot-. C. G. Olson and F. W. England. No. 1,383,843; July 5; v. 288; p. 122.
Grinding-wheel-truing tool. E. R. Conners. No. 1,383,601; July 5; v. 288; p. 71.
Gripper mechanism. F. E. Rich. No. 1,384,778; July 19; v. 288; p. 446.
Gromet. F. D. Martin. No. 1,384,565; July 12; v. 288; p. 320.
Guard, Footboard weather-. J. Valentine and F. W. Alkire. No. 1,385,287; July 19; v. 288; p. 550.
Guard for punching machines. S. B. Woodward. No. 1,385,237; July 19; v. 288; p. 540.
Guard, Trap-door. C. Peterson. No. 1,385,271; July 19; v. 288; p. 547.
Gudgeon, Box hull and calf wheel-. J. T. Taylor. No. 1,385,026; July 19; v. 288; p. 497.
Gun, Electric. F. B. MacLaren. No. 1,384,769; July 19; v. 288; p. 444.
Gun, Gas-. E. P. Welch. No. 1,384,366; July 12; v. 288; p. 279.
Gun, Grease-. A. J. Dilley. No. 1,384,941; July 19; v. 288; p. 479.
Gun-mount for airplanes. J. A. Roché. No. 1,385,755. July 26; v. 288; p. 722.
Gun, Mountain. E. Schneider. No. 1,383,765; July 5; v. 288; p. 105.
Gun positions, Destroying enemy. R. A. Fessenden. No. 1,384,030; July 5; v. 288; p. 160.
Gun, Toy machine-. F. H. Sommers. No. 1,385,054; July 19; v. 288; p. 503.
Gun-tube and manufacture of same. A. E. Guy. No. 1,384,718; July 12; v. 288; p. 353.
Gun with barrel adjustable in a lateral direction. L. Schmidt. No. 1,385,153; July 19; v. 288; p. 524.
Guns, Fire-direction apparatus for naval. W. Akemann. No. 1,384,005; July 5; v. 288; p. 155.
Guns, Shoulder-rest for. S. G. Green. No. 1,384,386; July 12; v. 288; p. 283.
Guns, Foundation for. A. Kästner & K. Stratomeyer. No. 1,385,136; July 19; v. 288; p. 520.
Gutter or eaves-trough hanger or support. N. Salmonsen. No. 1,384,856; July 19; v. 288; p. 460
Hair-cutter. E. E. Ziegler. No. 1,385,938; July 26; v. 28; p. 758.
Hair-straightening device, Safety. E. S. Lee. No. 1,384,906; July 19; v. 288; p. 471
Hair-waver. H. M. Siegel. No. 1,385,797; July 26; v. 288; p. 730.
Hair-waver. B. A. Sterling. No. 1,384,166; July 12; v. 288; p. 237.
Hammer. L. Dickinson. No. 1,383,452; July 5; v. 288; p. 41.
Hammering-machine. J. Ledwinka. No. 1,385,011; July 19; v. 288; p. 494.
Hand-lamp-switch. E. Alschuler. No. 1,384,548; July 12; v. 288; p. 317.
Handle: *See*—
Casket-handle. Sadiron-handle.
Crank-handle. Saw-handle.
Reversible brush-handle. Tool-handle.
Handle. J. S. Lapham. No. 1,383,826; July 5; v. 288; p. 118.
Hanger: *See*—
Bedpost-hanger. Railway-brake hanger.
Cable-tie hanger. Shaft-hanger.
Collapsible garment-hanger. Vehicle-body hanger.
Door-hanger.
Harrow. J. Y. M. Comrie. No. 1,385,861; July 26; v. 288; p. 743.
Harrow. J. W. Harris. No. 1,383,942; July 5; v. 288; p. 142.
Harrow. F. J. Luedke. No. 1,384,474; July 12; v. 288; p. 301.
Harvester, Cane-. N. K. Lyman. No. 1,383,833; July 5; v. 288; p. 119.
Harvester, Cotton-. W. F. Lockwood, B. H. Scott, and W. G. Royal. No. 1,384,265; July 12; v. 288; p. 258.
Harvesting and spreading machines, Hemp. L. Holland-Letz. No. 1,385,017; July 26; v. 288; p. 754.
Harvesting-bag. J. L. Kiley and R. E. Lucas. No. 1,383,956; July 5; v. 288; p. 144.
Hat-conformator. D. Freedline. No. 1,383,922; July 5; v. 288; p. 137.
Hat, Convertible. B. Radley. No. 1,385,404; July 26; v. 288; p. 669.
Hat-lining tips, Machinery for making. R. Bell. No. 1,385,240; July 19; v. 288; p. 541.
Hat-rack and coat-holder. J. W. Etchells. No. 1,383,611; July 5; v. 288; p. 73.
Hatbox, Collapsible portable. A. Hirschwitz. No. 1,384,065; July 12; v. 288; p. 216.
Hatch-ventilators, Raising and lowering device for. G. W. Nordstrom. No. 1,385,574; July 26; v. 288; p. 685.
Hay-rake, Self-dumping. J. L. Leonard. No. 1,384,264; July 12; v. 288; p. 258.
Headers, chambers, &c., Attaching tubes to. H. P. Bray. No. 1,384,989; July 19; v. 288; p. 489.
Heading hogsheads, Tool for. R. P. Watson. No. 1,384,650; July 12; v. 288; p. 339.
Headlight, Dirigible. H. M. Hale. No. 1,384,560; July 12; v. 288; p. 319.
Headlights, Mounting for. F. Buchanan. No. 1,383,386; July 5; v. 288; p. 27.
Heat-dissipating structure, Induction-coil. A. A. Kent. No. 1,385,624; July 26; v. 288; p. 695.

Hydrocarbons, Apparatus for vaporizing. P. O. Rowlands. (Reissue.) No. 15,153; July 12; v. 288; p. 357
Hydrocarbons, Preparation of drying oils from. H. A. Gardner and E. Bielouss. No. 1,384,447; July 12; v. 288; p. 296.
Hydrocyanic acid, Production of. F. J. Metzger. No. 1,385,333; July 19; v. 288; p. 559.
Hydrocyanic acid, Production of. F. J. Metzger. No. 1,385,336; July 19; v. 288; p. 559.
Hypodermic needle. A. E. Smith. No. 1,384,355; July 12; v. 288; p. 277.
Ice-box. J. M. Rhodes. No. 1,385,274; July 19; v. 288; p. 547.
Ice-cream-cone machine. C. Halset. No. 1,384,461; July 12; v. 288; p. 299.
Ice-cream freezer, Horizontal. E. Thompson. No. 1,384,728; July 12; v. 288; p. 354.
Ice shaver and cracker. J. B. Zorn. No. 1,385,294; July 19; v. 288; p. 551.
Ice-scoring machine. J. Fairhead. No. 1,384,749; July 19; v. 288; p. 439.
Igniter. G. A. Ley. No. 1,384,840; July 19; v. 288; p. 458.
Ignition-distributer. L. Erieson. No. 1,385,368; July 26; v. 288; p. 642.
Illuminated display-apparatus. A. Greenwood. No. 1,384,753; July 19; v. 288; p. 440.
Illuminated display device, Changeable. L. H. Williams. No. 1,385,236; July 19; v. 288; p. 540.
Illuminating device for switches, &c. K. Brodt. No. 1,385,300; July 19; v. 288; p. 552.
Illuminating means. E. I. Dodds. No. 1,385,778; July 26; v. 288; p. 726.
Impulses, Device for producing actuating. G. H. Lang. No. 1,383,549; July 5; v. 288; p. 60.
Inclinometer. J. A. Herring. No. 1,383,946; July 5; v. 288; p. 142.
Incubator, Hot-water electric. J. L. Nungester. No. 1,385,886; July 26; v. 288; p. 748.
Incubator-alarm. A. Olson. No. 1,384,628; July 12; v. 288; p. 334.
Incubator and brooder, Combined. J. R. Myers. No. 1,384,084; July 12; v. 288; p. 220.
Index-center. F. C. Dickow. No. 1,383,698; July 5; v. 288; p. 92.
Index device. J. Barker. No. 1,384,882; July 19; v. 288; p. 467.
Index mechanism. E. Nordstrom. No. 1,383,331; July 5; v. 288; p. 15.
Indicating apparatus, Automatic. J. A. Zahar and R. A. L. Volet. No. 1,384,653; July 12; v. 288; p. 339.
Indicator: *See*—
Dial-indicator. Direction-indicator.
Dining-table service-indicator. Flow-indicator.
Working-time indicator.
Information device, Automatic. W. C. Cutler. No. 1,384,306; July 12; v. 288; p. 266.
Injector. P. J. Creasey. No. 1,383,985; July 5; v. 288; p. 151.
Ink and producing same, Printing-. H. A. Barmier. No. 1,383,512; July 5; v. 288; p. 52.
Inner tube. R. B. Disbrow. No. 1,384,244; July 12; v. 288; p. 253.
Insect-killing device. G. W. Gomber. (Reissue.) No. 15,154; July 19; v. 288; p. 563.
Insect-traps. A. Gardon. No. 1,385,207; July 19; v. 288; p. 534.
Insoles, Machine for preparing. A. E. Johnson. No. 1,384,804; July 19; v. 288; p. 451.
Instrument. H. H. Boyce. No. 1,385,661; July 26; v. 288; p. 703.
Insulating metal particles. G. W. Elmen. No. 1,383,703; July 5; v. 288; p. 92.
Insulator. R. Sands. No. 1,384,214; July 12; v. 288; p. 247.
Internal-combustion engine. N. E. Davies. No. 1,383,536; July 5; v. 288; p. 57.
Internal-combustion engine. G. D. Howe. No. 1,384,133; July 12; v. 288; p. 231.
Internal-combustion engine. T. Morton. No. 1,384,846; July 19; v. 288; p. 460.
Internal-combustion engine. E. R. Olsen. (Reissue.) No. 15,160; July 19; v. 288; p. 564.
Internal-combustion engine. H. P. Stevens. No. 1,385,099; July 19; v. 288; p. 512.
Internal-combustion engine. S. R. Thornton. No. 1,385,161; July 19; v. 288; p. 525.
Internal-combustion engine. L. Wygodsky. No. 1,383,367; July 5; v. 288; p. 23.
Internal expanding brake. G. M. Carter. No. 1,385,482; July 26; v. 288; p. 666.
Invalid-handling apparatus. V. Billings. No. 1,385,424; July 26; v. 288; p. 654.
Iron: *See*—
Pressing-iron. Stay-iron.
Shoemaker's jack.
Iron and grate, Combination barbecue. A. H. Froom. No. 1,384,250; July 12; v. 288; p. 255.
Iron compounds, Manufacturing. F. Ball. No. 1,385,769; July 26; v. 288; p. 725.
Ironing-board. E. M. Trammell and W. C. Carothers. No. 1,384,361; July 12; v. 288; p. 278.
Ironing-board connection. C. E. Wintemute. No. 1,384,371; July 12; v. 288; p. 280.
Ironing-machine. E. J. Malone. No. 1,383,738; July 5; v. 288; p. 100.
Irrigating device, Overhead. W. H. Coles. No. 1,383,449; July 5; v. 288; p. 40.
Jack: *See*—
Auto-jack. Multiple-screw jack.
Journal-box jack. Pumping-jack.
Lifting-jack. Shoemaker's jack.
Jack, Friction-driven automobile power-. C. E. Curtiss. No. 1,383,450; July 5; v. 288; p. 40.
Jamb or latch, Spring slide-door. F. Clark. No. 1,383,983; July 5; v. 288; p. 150.
Jammer-hook. D. McGinnis. No. 1,383,649; July 5; v. 288; p. 81.
Jar-closure, Milk-sterilizing. H. J. Wintherlich. No. 1,383,894; July 5; v. 288; p. 132.
Jar-holder. C. A. Bartlett and L. H. Eastman. No. 1,384,176; July 12; v. 288; p. 239.
Jewelry, Article of. A. Knaus. No. 1,385,691; July 26; v. 288; p. 709.
Jewelry, Fastening-clasp for. E. W. Peterson. No. 1,383,848; July 5; v. 288; p. 122.
Jeweler's torch. S. W. Hoke. No. 1,384,954; July 19; v. 288; p. 482.
Jig, Saw-grinding. H. A. Jones and E. W. Struve. No. 1,385,175; July 19; v. 288; p. 528.
Joint: *See*—
Rail-joint. Universal joint.
Journal-bearing. J. T. Young. No. 1,384,502; July 12; v. 288; p. 307.
Journal-box jack. G. W. Rutledge. No. 1,385,892; July 26; v. 288; p. 749.
Key: *See*—
Deck-plate key.
Key and permutation-padlock, Combined. C. Judyckl. No. 1,384,390; July 12; v. 288; p. 284.

Key-holder. E. F. Symons. No. 1,384,497; July 12; v. 288; p. 306.
Key-lever spring-lock. A. J. Pruszynski and A. O. H. Ebert. No. 1,384,088; July 12; v. 288; p. 221.
Keyhole-finder. C. H. May. No. 1,384,622; July 12; 288; p. 333.

Lock-nut. L. M. Sartain. No. 1,384,859; July 19; v. 288; p. 462.
Locking device. E. Gilsom and E. von Beck. No. 1,383,801; July 5; v. 288; p. 802.
Locking device for the steering-wheels of motor-vehicles. R. A. Pyke. No. 1,385,469; July 26; v. 288; p. 663.
Locking hair-fastener. R. C. Jones. No. 1,385,349; July 19; v. 288; p. 502.
Locking levers fulcrumed for universal swinging movements, Mechanism for. G. C. Jensen. No. 1,385,552; July 26; v. 28; p. 681.
Locking mechanism. A. Bonza. No. 1,383,784; July 5; v. 288; p. 110.
Locking-rack. C. E. Campbell. No. 1,383,598; July 5; v. 288; p. 70.
Locomotive. G. H. F. Holy. No. 1,384,466; July 12; v. 288; p. 300.
Locomotive-boiler. J. P. Mongan. No. 1,385,386; July 26; v. 288; p. 646.
Locomotive driving-box. F. Cannon. No. 1,384,381; July 12; v. 288; p. 282.
Locomotives, Apparatus for burning pulverized fuel in. H. R. Barnhurst. No. 1,383,371; July 5; v. 288; p. 24.
Locomotives, Booster motor for. H. L. Ingersoll. No. 1,383,633; July 5; v. 288; p. 78.
Locomotives, Footplate for electric. A. Wallace. (Reissue.) No. 15,145; July 5; v. 288; p. 162.
Locomotives, Signal-lantern for. A. C. Hinckley. No. 1,384,387; July 12; v. 288; p. 283.
Log-barker. C. B. Thorne. (Reissue.) No. 15,144; July 5; v. 288; p. 162.
Logging-carriage. J. A. Pierson. No. 1,384,848; July 19; v. 288; p. 460.
Loom shuttle-bobbin. W. Routledge. No. 1,385,952; July 26; v. 288; p. 761.
Looms, Bumper for. O. P. Hargrove. No. 1,383,940; July 5; v. 288; p. 141.
Looms, Filling-catcher for. M. L. Stone. No. 1,383,874; July 5; v. 288; p. 128.
Looms, Filling or thread holder for. G. C. Haralson and W. E. Turner. No. 1,385,914; July 26; v. 288; p. 753.
Looms, Picker-staff check for. R. N. Reynolds and B. D. Ballew. No. 1,385,924; July 26; v. 288; p. 755.
Looms, Warp stop-motion for. A. E. Rhoades. No. 1,385,711; July 26; v. 288; p. 713.
Looms, Warp stop-motion for. E. L. Tinkham. No. 1,385,734; July 26; v. 288; p. 718.
Looms, Wind-up mechanism for. J. Northrop. No. 1,383,478; July 5; v. 288; p. 46.
Lubricating apparatus. W. Fahey. No. 1,385,531; July 26; v. 288; p. 676.
Lubricating apparatus, Connector for. R. P. Jacques. No. 1,383,306; July 5; v. 288; p. 10.
Lubricating-bolt. H. M. Naugle. No. 1,384,271; July 12; v. 288; p. 259.
Lubricating device. B. L. Madden. No. 1,384,536; July 12; v. 288; p. 314.
Lubricating device. C. T. Pflueger. No. 1,384,775; July 19; v. 288; p. 445.
Lubricating system. S. W. Finch. No. 1,383,919; July 5; v. 288; p. 137.
Lubricator: *See*—
Pump-lubricator.
Lubricator. H. J. Shavers. No. 1,384,353; July 12; v. 288; p. 276.
Lubricator. E. B. Smith and A. H. Loucks. No. 1,385,283; July 19; v. 288; p. 549.
Luggage-carrier. D. P. O'Keefe. No. 1,385,640; July 26; v. 288; p. 699.
Lumber or timber, Machine for trade-marking or branding. J. G. McDonough. No. 1,383,552; July 5; v. 288; p. 61.
Macaroni and noodles, Machine for making. S. Santilli. No. 1,384,350; July 12; v. 288; p. 276.
Machine for enameling plates and the like. R. H. Prichard. No. 1,385,492; July 26; v. 288; p. 668.
Machine operators, Guard for protecting. W. Woelfel. No. 1,384,501; July 12; v. 288; p. 307.
Machine-tools, Parallel for. E. J. Bryant. No. 1,383,979; July 5; v. 288; p. 149.
Machines, Rotor for magneto-electric. J. Bohli. No. 1,385,038; July 19; v. 288; p. 499.
Magnetic controlling mechanism. H. A. Steen. No. 1,385,801; July 26; v. 288; p. 731.
Magnetic pulley. J. P. Bethke. No. 1,384,177; July 12; v. 288; p. 240.
Magneto. A. U. Davis. No. 1,383,605; July 5; v. 288; p. 72.
Magneto. F. H. Schryer. No. 1,385,720; July 26; v. 288; p. 715.
Magneto-electric generator for lighting vehicles. C. F. Dufaux. No. 1,385,119; July 19; v. 288; p. 517.
Mangle. J. Norrie. No. 1,385,703; July 26; v. 288; p. 712.
Mangle. J. Norrie. No. 1,385,704; July 26; v. 288; p. 712.
Manhole. F. Shanley. No. 1,384,712; July 12; v. 288; p. 352.
Manifold-form sheet. L. Ingersoll. No. 1,385,832; July 26; v. 288; p. 737.
Map-case. F. H. Swanson. No. 1,384,874; July 19; v. 288; p. 465.
Map-plate. W. H. Greeley. No. 1,383,622; July 5; v. 288; p. 76.
Maps, Making double-page multicolor. W. H. Greeley. No. 1,383,621; July 5; v. 288; p. 75.
Mariners, Star-transit calculator and indicator for. H. L. V. D. Giot. No. 1,383,296; July 5; v. 288; p. 8.
Marking-tag. J. D. Nagel, Jr. No. 1,383,417; July 5; v. 288; p. 33.
Massaging-machine. J. Kercher. No. 1,384,072; July 12; v. 288; p. 218.
Mat. H. E. Gothberg. No. 1,384,891; July 19; v. 288; p. 468.
Matches, Detachable retainer for. M. Rope. No. 1,385,474; July 26; v. 288; p. 664.
Material-feed-reel brake. H. V. James. No. 1,383,953; July 5; v. 288; p. 144.
Materials, Apparatus for testing the hardness of. L. Johnson and H. Brearley. No. 1,384,389; July 12; v. 288; p. 284.
Matrices and color-screens therefrom, Producing. I Kitsee. No. 1,383,819; July 5; v. 288; p. 117.
Measure, Tape-. L. E. Wood. No. 1,383,587; July 5; v. 288; p. 68.
Measuring device. H. S. Petersen. No. 1,385,270; July 19; v. 288; p. 547.
Measuring device. E. P. Robbins and S. S. Matthes. No. 1,383,340; July 5; v. 288; p. 17.
Measuring the hardness of bodies, Apparatus for. A. Maire. No. 1,385,182; July 19; v. 288; p. 530.
Meat-cutting machine. J. W. Clark. No. 1,384,742; July 19; v. 288; p. 438.
Meat-tendering machine. A. F. Combs. No. 1,384,991; July 19; v. 288; p. 490.
Mechanical movement. E. E. Johnson. No. 1,383,308; July 5; v. 288; p. 10.
Mechanical movement. J. Krohn. No. 1,384,839; July 19; v. 288; p. 458.
Mess kit. G. H. Preston. No. 1,383,853; July 5; v. 288; p. 124.
Metal articles, Mechanism for treating. W. H. Needham. No. 1,383,418; July 5; v. 288; p. 33.
Metal bars and the like, Machine for bending. K. G. M. Rumbäck. No. 1,385,278; July 19; v. 288; p. 548.
Metal-coating machine. J. Monto and A. R. Curtis. No. 1,383,555; July 5; v. 288; p. 61.
Metal containers, Reinforcing-band for. A. J. Bentley. No. 1,385,602; July 26; v. 288; p. 691.
Metal, Manufacture of open-hearth. L. B. Lindemuth. No. 1,385,562; July 26; v. 288; p. 683.
Metal propeller for aircraft. H. Leitner. No. 1,385,561; July 26; v. 288; p. 682.
Metal tie. N. O. Goldsmith. No. 1,384,316; July 12; v. 288; p. 268.
Metal vehicle-wheel. L. S. Lachman. No. 1,385,380; July 26; v. 288; p. 645.
Metal wheel. L. S. Lachman. No. 1,383,824; July 5; v. 288; p. 118.
Metal wheel. M. Lachman. No. 1,385,381; July 26; v. 288; p. 645.
Metals, Amalgamating. R. H. Stevens. No. 1,384,683; July 12; v. 288; p. 340.
Metals, Method and apparatus for refining. S. A. Tucker. No. 1,384,499; July 12; v. 288; p. 306.
Metals, Working. O. C. Gilbert and E. W. Adams. No. 1,384,448; July 12; v. 288; p. 296.
Metallurgical furnace. B. Talbot. No. 1,383,444; July 5; v. 288; p. 39.
Meter: *See*—
Gas-meter. Water-meter.
Meter. A. B. Wood. No. 1,383,687; July 5; v. 288; p. 89.
Mica, Splitting. G. J. Bancroft. No. 1,383,370; July 5; v. 288; p. 24.
Micrometer. A. Tangen. No. 1,385,405; July 26; v. 288; p. 650.
Milking apparatus, Cow-. W. A. Shippert. No. 1,385,500; July 26; v. 288; p. 670.
Military equipment. A. A. Lethern. No. 1,383,315; July 5; v. 288; p. 12.
Milking-machine. H. B. Babson. No. 1,383,369; July 5; v. 288; p. 23.
Milking-machine installation. J. S. Read. No. 1,385,751; July 26; v. 288; p. 721.

Milking-machine pulsator. R. Maes. No. 1,384,266; July 12; v. 288; p. 258.
Milking-machines, Automatic stop for. E. D. Holmes. No. 1,385,049; July 19; v. 288; p. 501.
Milking-machines, Claw structure for. H. C. Oden. No. 1,385,577; July 26; v. 288; p. 686.
Mill: *See*—
Universal mill.
Mills, Cap construction for sugar-. G. Engel, Sr. No. 1,383,539; July 5; v. 288; p. 58.
Mills, Drive mechanism for. T. C. Campbell. No. 1,384,741; July 19; v. 288; p. 438.
Mills, Metal-guide for rolling-. W. A. Robbins. No. 1,385,338; July 19; v. 288; p. 559.
Milling-cutter. R. T. Pollock. No. 1,385,750; July 26; v. 288; p. 721.
Mine-car wheel. F. E. Johnson. No. 1,383,309; July 5; v. 288; p. 10.
Miner's breastplate. W. H. Davis. No. 1,383,909; July 5; v. 288; p. 134.
Miners' caps, Lamp-supporting attachment for. W. Israel. No. 1,383,721; July 5; v. 288; p. 97.
Mining-machine. F. E. Pray. No. 1,384,404; July 12; v. 288; p. 287.
Mirror and backing same. C. E. Akeley. No. 1,384,294; July 12; v. 288; p. 264.
Mirrors, Backing. C. E. Akeley. No. 1,384,420; July 12; v. 288; p. 290.
Mixing and aerating machine. W. V. Dawkins. No. 1,384,383; July 12; v. 288; p. 282.
Mixing materials, Machine for. T. J. Sturtevant. No. 1,385,849; July 26; v. 288; p. 741.
Moistening, sealing, and stamping device, Envelop. P. M. Zenner and H. H. Williams. No. 1,384,879; July 19; v. 288; p. 466.
Mold: *See*—
Waffle-mold.
Mold-separating device. A. P. Diescher. No. 1,383,608; July 5; v. 288; p. 73.
Mold-support. J. J. Milnes, Jr. No. 1,383,837; July 5; v. 288; p. 120.
Molds, Machine for engraving. A. A. Bush and R. H. Freitag. No. 1,385,333; July 19; v. 288; p. 559.
Molding-machine. P. W. Gates. No. 1,385,676; July 26; v. 288; p. 706.
Molding-machine. E. N. Olson and S. Swanson. No. 1,383,748; July 5; v. 288; p. 102.
Mole-trap. M. W. Russell. No. 1,385,024; July 19; v. 288; p. 497.
Monoazo dyestuff. A. J. Field. No. 1,383,711; July 5; v. 288; p. 95.
Monogram-printing device. L. A. Werner. No. 1,385,766; July 26; v. 288; p. 724.
Mop. F. L. Cunningham. No. 1,384,555; July 12; v. 288; p. 318.
Mop. G. P. Strellinger. No. 1,383,875; July 5; v. 288; p. 128.
Mop clamp and head. J. G. Couch. No. 1,385,427; July 26; v. 288; p. 654.
Mop-head. J. W. Morris and J. L. Ruddick. No. 1,384,147; July 12; v. 288; p. 234.
Motion and sound, Apparatus for recording. R. D. Gray. No. 1,384,612; July 12; v. 288; p. 331.
Motion, Mechanism for transmitting. C. B. Gray. No. 1,383,619; July 5; v. 288; p. 75.
Motor: *See*—
Hydrocarbon-motor.
Multiple-spring motor.
Self-cooled motor.
Spring-motor.
Wave-motor.
Wind-motor.
Motor. R. W. Borchert. No. 1,384,009; July 5; v. 288; p. 156.
Motor. A. L. Harrell. No. 1,384,256; July 12; v. 288; p. 256.
Motor-controlling mechanism, Spring-. B. S. Nickerson. No. 1,384,272; July 12; v. 288; p. 260.
Motor-cooling means. J. A. Ingram. No. 1,384,031; July 5; v. 288; p. 160.
Motor-vehicle lock. E. F. Cliff. No. 1,384,233; July 12; v. 288; p. 251.
Motor-vehicle lock. G. T. Watt. No. 1,385,030; July 19; v. 288; p. 498.
Motors, Elastic rod for. E. J. A. Schultz. No. 1,385,758; July 26; v. 288; p. 723.
Motors, Ignition device for internal-combustion. L. F. Hoffman. No. 1,384,321; July 12; v. 288; p. 269.
Motorcycle-tender. H. J. Goodman. No. 1,383,933; July 5; v. 288; p. 140.
Mouthpiece for wind musical instruments. M. H. and J. Babbitt. No. 1,385,239; July 19; v. 288; p. 541.
Movement, Mechanism for converting rotary to reciprocating. J. W. Hall. No. 1,385,002; July 19; v. 288; p. 492.
Mower. J. B. Nelson. No. 1,383,656; July 5; v. 288; p. 82.
Mowing-machine. F. R. Wilson and H. O. Ringo. No. 1,384,288; July 12; v. 288; p. 263.
Muffle-leer construction. P. L. Geer. No. 1,385,868; July 26; v. 288; p. 745.
Multicopy forms or blanks, Producing. G. A. Mayer and H. E. Murray. No. 1,385,569; July 26; v. 288; p. 684.
Multiple-gun-firing apparatus or bomb. G. A. Ekman. No. 1,385,120; July 19; v. 288; p. 517.
Multiple-screw jack. J. Coryell. No. 1,384,430; July 12; v. 288; p. 292.
Multiple-spring motor. I. F. Burton. No. 1,384,426; July 12; v. 288; p. 291.
Murcury ointment. J. P. Shepherd. No. 1,384,863; July 19; v. 288; p. 463.
Music-leaf turner. M. A. Walden. No. 1,384,364; July 12; v. 288; p. 278.
Music-roll container. W. L. Buedingen. No. 1,385,199; July 19; v. 288; p. 533.
Music-rolls, Machine for marking perforated. P. J. Meahl. No. 1,385,185; July 19; v. 288; p. 531.
Musical instrument. W. J. Maxwell, Jr. No. 1,384,843; July 19; v. 288; p. 459.
Musical instrument of the string type. J. N. Vasey and B. R. Kiessig. No. 1,383,500; July 5; v. 288; p. 50.
Musical instrument operated by percussion. V. Angyal. No. 1,385,808; July 26; v. 288; p. 750.
Musical instruments, Attachment for reed. G. B. Humes. No. 1,384,564; July 12; v. 288; p. 320.
Musical instruments, Tuning-pegs for stringed. A. D. Grover. No. 1,384,450; July 12; v. 288; p. 298.
Nail-strip holder. E. J. Miller. No. 1,383,993; July 5; v. 288; p. 152.
Neckbands, Ironing. G. B. Ehrmann. No. 1,384,605; July 12; v. 288; p. 329.
Needle, Larding-. B. Schwinzer. No. 1,384,161; July 12; v. 288; p. 236.
Nitrogen and hydrogen mixtures or nitrogen, Generating from air and hydrogen either. L. Casale. No. 1,384,428; July 12; v. 288; p. 292.
Non-foaming measuring-cup. A. I. Risser. No. 1,385,495; July 26; v. 288; p. 669.
Nozzle. J. F. Reeves. No. 1,384,540; July 12; v. 288; p. 315.
Nozzle and nozzle-fitting. H. A. Poppenhusen and A. P. Strong. No. 1,384,086; July 12; v. 288; p. 221.
Numbering-head. M. H. Kern. No. 1,385,835; July 26; v. 288; p. 738.
Nut-lock. W. H. Mansell. No. 1,383,414; July 5; v. 288; p. 33.
Nuts and similar articles, Manufacture of. J. R. Blakeslee. No. 1,384,118; July 12; v. 288; p. 227.
Occulting light. H. L. M. J. Benard. No. 1,384,658; July 12; v. 288; p. 341.
Ocotillo, Process and apparatus for distilling. S. M. Darling. No. 1,384,939; July 19; v. 288; p. 478.
Oil and product thereof, Solidifying China-wood. B. Scobel. No. 1,383,864; July 5; v. 288; p. 126.
Oil-burner. T. B. Ferguson. No. 1,384,943; July 19; v. 288; p. 479.
Oil-burner. H. E. Hunter. No. 1,385,132; July 19; v. 288; p. 519.
Oil-burner. W. D. Murray. No. 1,383,320; July 5; v. 288; p. 14.
Oil-burner. R. Papendell. No. 1,384,085; July 12; v. 288; p. 220.
Oil-burner with an attached combustion-box, Low-pressure. A. E. Hauck. No. 1,383,720; July 5; v. 288; p. 96.
Oil emulsion, Mineral-. C. B. Haley. No. 1,384,460; July 12; v. 288; p. 298.
Oil-feed controller. F. L. Fuldauer. No. 1,383,926; July 5; v. 288; p. 138.
Oil-hardening. A. A. Wells. No. 1,383,887; July 5; v. 288; p. 130.
Oil-indicator for motor-vehicles. F. H. Guyver. No. 1,385,128; July 19; v. 288; p. 579.
Oil, Lubricating-. J. F. Maloney. No. 1,384,703; July 12; v. 288; p. 350.
Oil, Means for protecting switch-contacts under. H. F. Stratton. No. 1,384,025; July 5; v. 288; p. 159.
Oil, Mineral. W. N. Blakeman, Jr. No. 1,385,035; July 19; v. 288; p. 499.
Oil, Mineral. W. N. Blakeman, Jr. No. 1,385,036; July 19; v. 288; p. 499.
Oil, Mineral. W. N. Blakeman, Jr. No. 1,385,037; July 19; v. 288; p. 499.
Oil or asphalt, Emulsifying. D. J. McSwiney. No. 1,384,805; July 19; v. 288; p. 451.
Oil-proofed container and making same. C. Ellis. No. 1,385,041; July 26; v. 288; p. 758.
Oil-ring. W. H. Kempton. No. 1,384,470; July 12; v. 288; p. 300.
Oil-well mechanism. W. E. Hancock. No. 1,384,525; July 12; v. 288; p. 312.
Oils, Deodorization of. J. W. Bodman and T. M. Godfrey. No. 1,385,660; July 26; v. 288; p. 703.
Oils, Preparation of drying. E. Bleiouss. No. 1,384,423; July 12; v. 288; p. 291.
Ointment. J. P. Shepherd. No. 1,383,493; July 5; v. 288; p. 49.
Ointment. J. Wood. No. 1,383,896; July 5; v. 288; p. 132.
Ophthalmic mounting. E. L. Schumacher and W. H. Brentelle. No. 1,384,862; July 19; v. 288; p. 463.
Ophthalmic mounting. F. A. Stevens. No. 1,383,872; July 5; v. 288; p. 127.
Ophthalmic-mounting-adjusting device. F. A. Stevens. No. 1,384,872; July 19; v. 288; p. 465.
Optical instruments, Fastening means for. W. Wittig. No. 1,385,512; July 26; v. 288; p. 673.
Ordnance, Pointing device for. R. Schürmann and L. Schmidt. No. 1,384,000; July 5; v. 288; p. 154.
Ordnance, Sighting device for. M. Bartholdy. No. 1,384,007; July 5; v. 288; p. 155.

Ores and metallurgical products, Recovery of lead and silver from sulfid. H. Hey. No. 1,384,465; July 12; v. 288; p. 299.
Ores, Mechanical device for the removal of dust from the gases derived from roasting. L. Geschwind. No. 1,383,715; July 5; v. 288; p. 95.
Organ, Reed-. W. A. Cook. No. 1,383,289; July 5; v. 288; p. 6.
Orthopedic metatarsal arch-support. M. D. Calcutll. No. 1,385,664; July 26; v. 288; p. 704.
Outlet-box. J. J. Rutledge. No. 1,383,487; July 5; v. 288; p. 47.
Outlet-box. G. C. Thomas, Jr. No. 1,383,879; July 5; v. 288; p. 129.
Oven, Baker's. J. J. Reid. No. 1,384,406; July 12; v. 288; p. 287.
Oven, Baking-. J. K. Bradley. No. 1,385,662; July 26; v. 288; p. 703.
Oven-heating system. E. Piron. No. 1,384,149; July 12; v. 288; p. 234.
Oxyacetylene-blowpipe. I. Allison and W. J. Leighty. No. 1,384,224; July 12; v. 288; p. 249.
Package. E. H. Angier. No. 1,385,165; July 19; v. 288; p. 520.
Package, Merchandise-. G. C. Macdonald. No. 1,385,017; July 19; v. 288; p. 495.
Package-tie. C. G. Servis. No. 1,385,956; July 26; v. 288; p. 761.
Packaging mechanism. J. C. Schaffer. No. 1,385,498; July 26; v. 288; p. 669.
Packing-case. L. W. Hughes. No. 1,383,401; July 5; v. 288; p. 30.
Packing, Metallic. W. L. Harris. No. 1,383,943; July 5; v. 288; p. 142.
Pad: *See*—
Stamp-inking pad.
Padlock. A. Skutnik. No. 1,384,277; July 12; v. 288; p. 260.
Padlock. F. Soley. No. 1,384,682; July 12; v. 288; p. 346.
Padlock, Combination-. W. S. McAdoo. No. 1,383,317; July 5; v. 288; p. 12.
Pail. J. H. Wilson. No. 1,385,413; July 26; v. 288; p. 651.
Paint composition. W. N. Blakeman, Jr. No. 1,385,034; July 19; v. 288; p. 499.
Paint vehicle for anhydrous pigments. W. N. Blakeman, Jr. No. 1,385,033; July 19; v. 288; p. 499.
Pan: *See*—
Dustpan.
Pan and skimmer, Evaporating-. E. B. Poole. No. 1,385,393; July 26; v. 288; p. 647.
Panchromatic sensitizing composition. W. Friese-Greene. No. 1,383,620; July 5; v. 288; p. 75.
Pane-fastener. C. J. Soll. No. 1,385,725; July 26; v. 288; p. 716.
Pantograph. R. C. Emmerling. No. 1,383,914; July 5; v. 288; p. 135.
Paper-box machine. C. C. Davis. No. 1,383,697; July 5; v. 288; p. 91.
Paper centering-cups or the like, Making. H. de Olaneta. No. 1,385,431; July 26; v. 288; p. 655.
Paper-crinkling apparatus. W. M. Wheildon. No. 1,383,360; July 5; v. 288; p. 21.
Paper-dispensing device. A. Simpson. No. 1,384,604; July 12; v. 288; p. 337.
Paper-feeding mechanism. C. Spiro. No. 1,383,775; July 5; v. 288; p. 108.
Paper-machines, Fiber-crossing apparatus for. G. S. Witham, Jr. No. 1,383,363; July 5; v. 288; p. 22.
Paper, Making colored. L. P. Winchenbaugh and L. Gentile. No. 1,384,290; July 12; v. 288; p. 263.
Paper, Method of and apparatus for waxing. J. Decker and A. C. Van Sluys. No. 1,385,042; July 19; v. 288; p. 509.
Paper-roll storage and delivery gallery. R. R. McCormick. No. 1,383,318; July 5; v. 288; p. 12.
Paper-ruling-pen underlift. C. J. La Vigueur. No. 1,383,314; July 5; v. 288; p. 11.
Paper-stock-treating machine. M. C. J. Billingham. No. 1,384,987; July 19; v. 288; p. 489.
Paper-tester. G. S. Witham, Jr. No. 1,385,164; July 19; v. 288; p. 526.
Paper towel. C. M. and P. Conradson. No. 1,384,515; July 12; v. 288; p. 310.
Paper tube and container. C. H. Howard. No. 1,383,809; July 5; v. 288; p. 115.
Parachute-harness. E. R. Boland. No. 1,385,7[illegible]; July 26; v. 288; p. 726.
Paring, coring, and slicing machine, Apple. W. Ehrlich. No. 1,384,013; July 5; v. 288; p. 157.
Parking-light. J. J. Rohde. No. 1,383,569; July 5; v. 288; p. 64.
Paste-applying apparatus. F. Coates. No. 1,384,048; July 12; v. 288; p. 213.
Paste-dispensing device. W. A. Daniel. No. 1,384,307; July 12; v. 288; p. 266.
Paste, Stainless. D. M. Phillips. No. 1,384,917; July 19; v. 288; p. 474.
Pattern or guide, Neck-shaving. W. T. Sessoms. No. 1,385,722; July 26; v. 288; p. 715.
Pavement construction. F. A. Brotsch, Jr. No. 1,384,042; July 12; v. 288; p. 212.
Pavements, Making. W. E. Ficklen. No. 1,383,459; July 5; v. 288; p. 42.
Paving apparatus. R. C. Stubbs. No. 1,383,581; July 5; v. 288; p. 67.
Pea-picker. T. S. Mouchet. No. 1,384,626; July 12; v. 288; p. 334.
Peanut-digger. S. P. Stevens. No. 1,383,580; July 5; v. 288; p. 67.
Pectin, Extracting. T. W. Doell and L. A. F. Maes. No. 1,385,525; July 26; v. 288; p. 675.
Peeling-machines, Disk for. C. F. Smith. No. 1,384,356; July 12; v. 288; p. 277.
Pellets into containers, Machine for feeding. J. E. Groves. No. 1,383,623; July 5; v. 288; p. 76.
Pen, Drawing-. C. E. Burnap. No. 1,384,232; July 12; v. 288; p. 251.
Pen-extractor. E. E. Black. No. 1,383,377; July 5; v. 288; p. 25.
Pen or reservoir-pen, Double-flow fountain-. Y. Mukojima. No. 1,383,416; July 5; v. 288; p. 33.
Pencil. W. Meyner. No. 1,384,706; July 12; v. 288; p. 351.
Pencil. P. W. Olson. No. 1,385,187; July 19; v. 288; p. 530.
Pencil-tip and penholder. H. Gonzalez. No. 1,383,298; July 5; v. 288; p. 8.
Percussive tools, Blowing device for. W. A. Smith. No. 1,384,641; July 12; v. 288; p. 337.
Percussive tools, Rotation means for. H. A. Gulley. No. 1,384,661; July 12; v. 288; p. 341.
Permutation-lock. S. S. Swan. No. 1,384,577; July 12; v. 288; p. 323.
Perylen, Manufacturing. F. Hansgirg. No. 1,384,615; July 12; v. 288; p. 331.
Petroleum-refining, Reclaiming sludge-acid in. W. H. Simonson and O. Mantius. No. 1,384,978; July 19; v. 288; p. 487.
Phonograph repeat mechanism. W. B. Benham. No. 1,384,034; July 5; v. 288; p. 161.
Phonographs, Electric reproducer for. H. Armagnat and P. Freiy. No. 1,384,295; July 12; v. 288; p. 264.
Phonographs, Tone-arm for. W. Frick. No. 1,384,015; July 5; v. 288; p. 157.
Photograph-album. L. L. Witte. No. 1,385,196; July 19; v. 288; p. 532.
Photographic apparatus. F. E. Ives. No. 1,383,543; July 5; v. 288; p. 59.
Photographic drying-machine. A. W. Dreyfoos. No. 1,385,365; July 26; v. 288; p. 642.
Photographic exposing apparatus. W. F. Folmer. No. 1,383,395; July 5; v. 288; p. 29.
Photographic exposure mechanism. D. M. Hurlburt. No. 1,383,505; July 5; v. 288; p. 10.
Photographic exposures, Method of and apparatus for determining. V. L. Ellicott. No. 1,385,040; July 26; v. 288; p. 758.
Photographic moving-picture films, Machine for treating. C. A. Sentou and E. Jacquet. No. 1,385,403; July 26; v. 288; p. 649.
Photographic-printing machine. W. D. Wood. No. 1,384,372; July 12; v. 288; p. 280.
Photography, Color. W. Friese-Greene. No. 1,383,460; July 5; v. 288; p. 42.
Piano-keys, Pellet-inserting machine for. S. Sylvester. No. 1,383,497; July 5; v. 288; p. 49.
Piano, Player-. S. L. Fisher. No. 1,384,093; July 19; v. 288; p. 490.
Pianos, Motor-mounting for player-. C. Freborg. No. 1,385,819; July 26; v. 288; p. 735.
Pick-up and separating machine. G. I. Kohr. No. 1,385,874; July 26; v. 288; p. 746.
Picker: *See*—
Potato-picker.
Pickling solutions, Reclaiming spent. J. A. Shaw. No. 1,384,974; July 19; v. 288; p. 486.
Picture apparatus, Lamphouse for moving-. N. Power. No. 1,383,754; July 5; v. 288; p. 103.
Picture-frame, Adjustable. A. Petrow. No. 1,385,950; July 26; v. 288; p. 760.
Picture machine, Motion-. C. F. Jenkins. No. 1,385,325; July 19; v. 288; p. 557.
Picture machine, Moving-. A. H. Seeley. No. 1,383,571; July 5; v. 288; p. 65.
Picture machines, Attachment for moving-. B. G. Ross and O. Brindley. No. 1,383,428; July 5; v. 288; p. 35.
Picture machines, Lamp-house for moving-. N. Power. No. 1,383,753; July 5; v. 288; p. 103.
Picture-projecting apparatus. I. Serrurier. No. 1,385,955; July 26; v. 288; p. 761.
Picture-projection apparatus, Motion-. E. D. Tillyer. No. 1,385,162; July 19; v. 288; p. 526.
Picture projector, Motion-. C. Kesses. No. 1,384,527; July 12; v. 288; p. 312.
Pigments, Production of fine soot suitable for the manufacture of. E. Szarvasy. No. 1,383,674; July 5; v. 288; p. 87.
Pillow or like object. C. S. Banks. No. 1,385,355; July 26; v. 288; p. 640.
Pin: *See*—
Rolling-pin.
Safety-pin.
Wrist-pin.
Pin or stake, Tethering. B. M. Bradford and J. F. Le Gere. No. 1,385,859; July 26; v. 288; p. 743.

Flattening pine.
Pipe-covering, Metallic. J. A. Waldorf. No. 1,383,680; July 5; v. 288; p. 88.

Pipe-cutter. I. W. Nonneman. No. 1,384,208; July 12; v. 288; p. 240.
Pipe-holder. L. E. Ferguson. No. 1,384,055; July 12; v. 288; p. 215.
Pipe-making machine. G. J. Olsen and F. Waterfield. No. 1,384,021; July 5; v. 288; p. 158.
Pipe-wrench. J. G. Smith. No. 1,384,104; July 12; v. 288; p. 225.
Pipes, Chemical-retainer for sewer-. N. R. Hageman. No. 1,383,938; July 5; v. 288; p. 141.
Pipes, Machine for flanging soft-metal. P. Mueller and A. C. Schuermann. No. 1,383,839; Juy 5; v. 288; p. 121.
Pipes, Machine for flanging soft-metal. P. Mueller, A. C. Schuermann, and R. H. Mueller. No. 1,383,840; July 5; v. 288; p. 121.
Pipes of retorts, Protector for the heating-. E. E. Quinker. No. 1,383,424; July 5; v. 288; p. 35.
Pistol, Sword-hilt. F. Stuller. No. 1,384,644; July 12; v. 288; p. 338.
Piston. H. W. Pierce. No. 1,383,849; July 5; v. 288; p. 123.
Piston and ring. P. Le R. Kersey. No. 1,385,556; July 26; v. 288; p. 681.
Piston of uniflow steam-engines. H. Pilling. No. 1,385,226; July 19; v. 288; p. 538.
Piston-packing. W. J. Schlacks. No. 1,384,097; July 12; v. 288; p. 223.
Piston-pins, Making. D. H. Bellamore and T. I. S. Boak. No. 1,385,357; July 26; v. 288 p. 640.
Piston-ring. M. S. Gill. No. 1,385,613; July 26; v. 288; p. 693.
Piston-ring. O. W. Hanson. No. 1,384,131; July 12; v. 288; p. 230.
Piston-ring. M. B. Setter. No. 1,384,158; July 12; v. 288; p. 236.
Piston-ring. L. J. Trembley. No. 1,385,508; July 26; v. 288; p. 672.
Piston-ring placer. E. McPeek. No. 1,385,922; July 26; v. 288; p. 755.
Piston-ring tool. J. O. Roberts. No. 1,384,779; July 19; v. 288; p. 446.
Piston-rings, Manufacture of. W. A. Oubridge. No. 1,385,345; July 19; v. 288; p. 561.
Piston-rod lubricator and nut-retainer. O. Swanson. No. 1,383,496; July 5; v. 288; p. 49.
Placard-sustaining means. W. E. Harrison. No. 1,384,757; July 19; v. 288; p. 441.
Planers, Driving-gear for metal. F. E. Cardullo. No. 1,384,382; July 12; v. 288; p. 282.
Planter. G. H. Wright. No. 1,385,937; July 26; v. 288; p. 758.
Plaster-board. C. R. Birdsey. No. 1,384,298; July 12; v. 288; p. 265.
Plaster-ground. A. Oliver. No. 1,385,466; July 26; v. 288; p. 663.
Plastic composition. M. K. Armstrong. No. 1,384,037; July 12; v. 288; p. 211.
Plastic composition for bricks. J. Smith. No. 1,385,757; July 26; v. 288; p. 723
Plastic masonry, Implement for forming grooves in. J. D. Hendricks. No. 1,383,301; July 5; v. 288; p. 9.
Plate-feeding apparatus. H. S. Thomas, W. R. Davies, and R. B. Thomas. No. 1,384,646; July 12; v. 288; p. 338.
Plate-finishing machine. W. M. Wood and H. Reynolds. No. 1,385,416; July 26; v. 288; p. 652.
Plate-holders, Indicator for. A. J. Vigneault. No. 1,384,363; July 12; v. 288; p. 278.
Plate, Indicating-. N. E. McMahon. No. 1,384,912; July 19; v. 288; p. 473.
Plates, Apparatus for cleaning and polishing metal-coated. H. S. Thomas, W. R. Davies, and R. B. Thomas. No. 1,384,647; July 12; v. 288; p. 338.
Plates, Device for bending. H. G. Tregillus. No. 1,383,882; July 5; v. 288; p. 129.
Plates, Feeding mechanism for. T. B. Hughes, W. J. Davis, and D. D. Hughes. No. 1,383,304; July 5; v. 288; p. 9.
Plates, Holder for license-. C. M. Bolich. No. 1,384,229; July 12; v. 288; p. 250.
Players, Expression device for automatic. F. J. Clark. No. 1,384,010; July 5; v. 288; p. 156.
Plow. S. Domanski. No. 1,383,609; July 5; v. 288; p. 73.
Plow, Cantsliver-. M. J. Corrigan. No. 1,384,992; July 19; v. 288; p. 490.
Plow, Double-moldboard. M. Schultz. No. 1,384,924; July 19; v. 288; p. 475.
Plow, Motor-. E. Wendeler. No. 1,385,960; July 26; v. 288; p. 762.
Plow, Power-lift. L. E. Waterman. No. 1,384,792; July 19; v. 288; p. 448.
Pontoon, Resilient. A. B. Saliger. No. 1,384,894; July 12; v. 288; p. 222.
Portable bathhouse. J. C. Hammond. No. 1,385,615; July 26; v. 288; p. 694.
Portable engine. F. D. Ward. No. 1,385,289; July 19; v. 288; p. 550.

Oil-ring. Piston-ring.
Rings, Apparatus for contracting. E. T. Greenfield and J. G. V. Lang. No. 1,384,752; July 19; v. 288; p. 440.
Rivet or fastener. R. L. Smith. No. 1,385,799; July 26; v. 288; p. 731.
Rivet-passing apparatus, Pneumatic. W. B. Furman. No. 1,385,820; July 26; v. 288; p. 735.
Riveting machinery. C. R. Engel. No. 1,383,915; July 5; v. 288; p. 136.
Riveting-tool. A. I. Allbright and F. L. Myatt. No. 1,384,374; July 12; v. 288; p. 281.
Road-construction machinery. H. P. Martin. No. 1,384,077; July 12; v. 288; p. 219.
Road-working machine. D. C. Mowry. No. 1,384,207; July 12; v. 288; p. 246.
Robe-holder. E. G. Lavoie. No. 1,383,720; July 5; v. 288; p. 98.
Rock-drill. W. A. Smith. No. 1,384,216; July 12; v. 288; p. 248.
Rod: *See*—
Connecting-rod. Front-axle radius-rod.
Roll. E. Reed. No. 1,384,806; July 19; v. 288; p. 452.
Roller-bearing swivel-wrench, Safety. B. H. Abernathy. No. 1,383,274; July 5; v. 288; p. 3.
Roofing material and joining the ends of felt in making same. O. Kiracofe. No. 1,383,720; July 5; v. 288; p. 98.
Roofing, Surface-finishing of bituminous-composition. J. C. Woodley. No. 1,384,110; July 12; v. 288; p. 226.
Roofing, Surfacing-machine for. L. F. Lindley and A. S. Speer. No. 1,384,534; July 12; v. 288; p. 314.
Rolling-pin. W. Harris. No. 1,385,916; July 26; v. 288; p. 754.
Rope-socket. W. D. Shaffer. No. 1,384,489; July 12; v. 288; p. 304.
Rotary engine. P. Ericson. No. 1,383,916; July 5; v. 288; p. 136.
Rotary engine. J. M. MacFarlane. No. 1,385,084; July 19; v. 288; p. 509.
Rotary engine. S. D. Master. No. 1,385,880; July 26; v. 288; p. 747.
Rotary into reciprocating movements, Machines for translating. N. D. Stewart. No. 1,384,360; July 12; v. 288; p. 278.
Rotary pump with sliding plates. E. Henry. No. 1,385,619; July 26; v. 288; p. 694.
Rubber article, Inflatable. F. T. Roberts. No. 1,385,095; July 19; v. 288; p. 511.
Rubber composition, India-. A. Nixon. No. 1,384,400; July 12; v. 288; p. 286.
Rubber-heel washers, Holder for. H. F. Maranville. No. 1,385,086; July 19; v. 288; p. 510.
Rubber razor. R. E. Billingsley. No. 1,383,783; July 5; v. 288; p. 109.
Rubber, Regeneration of old or waste. C. Georgi. No. 1,385,869; July 26; v. 288; p. 745.
Rubber, Utilizing vulcanized waste. S. B. Molony. No. 1,384,773; July 19; v. 288; p. 445.
Running-board carrier. I. W. Copelin. No. 1,385,308; July 19; v. 288; p. 554.
Running-board for motor-vehicles. F. Smith. No. 1,385,232; July 19; v. 288; p. 539.
Runway. L. R. Arnold. No. 1,384,114; July 12; v. 288; p. 227.
Saddle, Motorcycle-. C. A. Waterman and H. F. Smith. No. 1,384,791; July 19; v. 288; p. 448.
Saddle, Running-board. D. W. Hawksworth. No. 1,385,618; July 26; v. 288; p. 694.
Sadiron. N. Ruhenstein. No. 1,385,040; July 26; v. 288; p. 700.
Sadiron-handle. J. J. Schilder. No. 1,384,023; July 19; v. 288; p. 475.
Safe. A. F. Blacksmith. No. 1,384,509; July 12; v. 288; p. 308.
Safety-clasp. J. Dinhofer. No. 1,385,117; July 19; v. 288; p. 517.
Safety device. L. P. Braddy. No. 1,383,786; July 5; v. 288; p. 110.
Safety-lock. W. Koziol. No. 1,384,723; July 12; v. 288; p. 353.
Safety-lock. M. Szymkiewicz. No. 1,383,443; July 5; v. 288; p. 39.
Safety oil-can. J. D. Richey. No. 1,385,712; July 26; v. 288; p. 714.
Safety-pin. C. O. Ellert. No. 1,385,743; July 26; v. 288; p. 719.
Saggar. D. B. Howell. No. 1,384,468; July 12; v. 288; p. 300.
Salt-sprout. C. B. Knox. No. 1,383,640; July 5; v. 288; p. 79.
Sash, Retaining device for window-. W. M. Ducker. No. 1,384,556; July 12; v. 288; p. 318.
Sash-weight. E. R. Leonard. No. 1,384,074; July 12; v. 288; p. 218.
Sashes, Spring-balance for window-. E. F. Chaffee. No. 1,383,982; July 5; v. 288; p. 150.
Sausage-linking machine. H. Cramer. No. 1,384,050; July 12; v. 288; p. 214.
